FOREWORD

I have attempted, in the following pages, to bring out the psychology of the various French ages from a study of French works and furniture.

This little volume is not designed for scholars but for the general public, and more particularly for youthful readers and all persons of good will who are anxious to understand and be moved. To understand already means to love. We are ignorant of too many things, and that ignorance deprives us of a thousand exquisite pleasures which perpetually spring up before us unawares. From history we are taught the list of successive battles and kings, the tragedies of the royal palace and the courtiers' intrigues. But of the people's intimate life what do we know? Of the race in the making, of its thoughts, which bred our own, of its manners and needs, of the dreams it brooded over so as to hatch them into reality of the long, painstaking patience which attended our infancy, of the throes at our birth, we know nothing; and that is a great pity.

It has often been repeated that Art belongs to no particular country. No phrase can be more untrue, if taken in a literal sense. It simply means that we are free to love or admire the creations of art, whatever their origin may be, since they all alike embody the aspirations of mankind. But the eclecticism of art-fanciers shall not prevent these works from having a mother-country, for they actually and preeminently are the psychical expression of the race from which they proceed. Every people, at every moment of its history,

has borne the consequences of historical events. Which period, more fitly than our own, might serve to illustrate this truth? What we at present verify has been of constant occurrence. After every shock, the ways of living, feeling and thinking, have been modified. And the more violent the crisis, the deeper the change. Manners ever alter with circumstances; and ideas evolve with the new aspects of the freshly-born future. Quite naturally this transformation of tastes, morals, and notions, will be rendered perceptible, in the material sphere, by an alteration in fashions, furniture, and the several knickknacks that are the auxiliaries of everyday life. In the spiritual order, it will find expression in the creations of art. The parallel progress of events, manners, and feelings presents successive, though corresponding stages. The same connection which may be seen linking together historical facts, reveals itself with like evidence between the various phases of moral evolution and the manifestations of art.

A work of art, therefore, is a document of social psychology. The sequence of these works represents the successive states of the mind of those who lived before us, struggling, labouring, and bleeding, in order to make us what we are. In its respective works of art, every human group in every age, every district of every country, has given in turn the formula of its own passions and sufferings, of its creed and aspirations. Art is a nation's confession; it is the permanent witness of man's hopes and of the ensuing disappointment.

All ages alike have similarly aimed at a state of happiness whereof they seemed to catch a glimpse, but which presently vanished from their sight. All, feeling equally certain of having secured the final truth, have testified to their faith by building on the ground the monument which they mean to bequeath to the ages to come. Thus the chronology of the works still shows us the stages of that inveterate mysticism which withstands all disillusionments and ever worships with like enthusiasm an ideal for ever changing.

To study art without bringing it together with history, would mean scrutinizing an effect and overlooking the cause; to record a result without penetrating its deeply human significance, would be to show the substance without considering the soul. Now a museum is a collection of souls.

As for such fragile debris as are somewhat scornfully termed "knickknacks", they are hardly less venerable. Apart from all æsthetical value, be it ever so indifferent or even quite null, they make up our heirloom. The more intimate their nature is, the stronger their power of evocation if we only know how to appreciate what they embody. Living history is breathed from these dead things. They were loved in their time, and who was it that loved them? Those people from whom we are descended and who cleared the way for us. These things were at once the creations of our forefathers, their auxiliaries at work, their companions in their home life. In the very dwelling where they once filled a place and played a part, we ourselves were by them in the end. One might almost say that the hands which touched them were our own in an age when we were not yet born.

And they quiver at it still! The amount of labour which had to be yielded, the sum total of hardships that must be undergone from age to age, to trudge on to where we now stand, these things have stored up all, day after day. They are the relics of our past, and the house where they are gathered is the sanctuary of a nation. Standing thus side by side, they mark the secular stages of a family marching on to its goal.

Unknown the goal may be, yet the steps remain unwearied. No age has ever caught sight of the end which those that follow shall possibly reach. The best means for guessing whither we go is to examine whence we come. For the line is a steady one, and the race is homogeneous. The generations come and go, ousting each other, unlike in appearance, yet identical at bottom, and all instinct with the one and same power, to wit their hereditary soul.

EDMOND HARAUCOURT.

PLAN OF THE "HOTEL DE CLUNY"
AND INDEX TO THE COLLECTIONS

OUTSIDE THE HOTEL :

- A — Salle des Thermes : Stone carvings, from the 1st to the 14th century.
- B — Porch under the chapel : Stone carvings, of the 15th and beginning of the 16th century.
- C — Arcades in the Great Courtyard : Stone carvings, of the 15th and 16th centuries.
- D — Vaulted passage.
- E — Garden.

GROUND-FLOOR : Stone, leather and metal work.

- | | |
|----------------------------|--|
| Room I — Vestibule. | Room VIII — Corridor of Spanish Retedos. |
| • II — Foot-wear. | • IX — Carved wood. |
| • III — Leather articles. | • X — Iron-work. |
| • IV — Lead and pewter. | • XI — Iron-work (Room of the Holy Spirit) |
| • V — Bronze. | • XII — Conches. |
| • VI — Corridor of mirrors | |
| • VII — Audéoud Collect. | |

THE "PALAIS DES THERMES" and the "HOTEL DE CLUNY"

THE building consists of two quite distinct parts, one belonging to the Gallo-Roman period, the other to the late xvth century. The Roman portion was probably erected during the reign of the Emperor Hadrian. It possibly dates back to the year 132 A. D., but at any rate, is not later than 228 A. D. Moreover the name « Palais des Thermes » is incorrect; the Middle Ages were more precise when they said « the Thermes ». It has been proved that, contrary to a belief held even of late years, the building was never a palace inhabited by emperors, but a sumptuous warm-bath establishment, analogous with the Thermes of Caracalla in Rome, and built close by another similar, though less luxurious, establishment which stood on the site of the present Collège de France. At that time, long gardens planted with fig trees, vines and rose-bushes, ran down to the Seine. The Emperor Julian, however fond he may have been of this charming spot, never made it his official residence. The reason was that he already possessed one in the « île de la Cité », precisely where the « Palace of Justice » (Law-Courts) now stands.

It has also been asserted that the Frankish monarchs lived and that Klodomir's children were murdered here; again that it was the residence of Charlemagne, but none of these fanciful suppositions is either founded on fact or

likely. From the early days of the barbaric invasion the bathing installation had lost all its practical use, yet the massive pile remained standing. In 885 the Normans set fire to it while besieging Paris, some calcined stones still exist in the arches of the *Tepidarium*. Numerous suburban habitations were erected within the shelter of the Roman walls, wherein holes may still be seen into which the beams of the floorings and roofs were fitted. Howbeit the land and ruins were still part of the royal domain. Philippe-Auguste disposed of them in 1215 and in the following century they were in the hands of the Benedictines of Cluny.

This powerful brotherhood had already been in existence for three centuries. In 909, William, duke of Aquitaine, had given the domain and village of Cluny in Burgundy to a poor Benedictine monk, to enable him to found his monastery there. The property was « free from all secular power, even royal, and from all ecclesiastical power, excepting the Pope's ». These Cluniacs rapidly grew rich and inclined to ostentation. A century and a half after the foundation of the Order, Saint-Bernard already reproached them with their princely and luxurious way of living, with the Abbot's three score horses, his escort of honour, and his magnificent buildings. They were soon to act as hosts to popes, kings and emperors. Then, by way of reaction, the rival institution of Cîteaux established itself opposite the Cluny building, and, to heighten the contrast between the two orders, imposed upon itself, from the outset, strict principles which however were quickly relaxed. Yet the antagonism between the black friars at Cluny and the white friars at Cîteaux did not cease to exist. Twenty years later the latter in their turn had grown so rich and powerful that they owned eighteen hundred monasteries and fourteen hundred nunneries. Once more the austere pastor of the Crusades became alarmed at such prosperity just as he had formerly become indignant at the Cluniacs' splendour.

In 1340 the monks of Cluny had recently acquired the

likely. From the early days of the barbaric invasion the bathing installation had lost all its practical use; yet the massive pile remained standing. In 885 the Normans set fire to it while besieging Paris; some calcined stones still exist in the arches of the *Tepidarium*. Numerous suburban habitations were erected within the shelter of the Roman walls, wherein holes may still be seen into which the beams of the floorings and roofs were fitted. Howbeit the land and ruins were still part of the royal domain. Philippe-Auguste disposed of them in 1215 and in the following century they were in the hands of the Benedictines of Cluny.

This powerful brotherhood had already been in existence for three centuries. In 909, William, duke of Aquitaine, had given the domain and village of Cluny in Burgundy to a poor Benedictine monk, to enable him to found his monastery there. The property was " free from all secular power, even royal, and from all ecclesiastical power, excepting the Pope's ". These Cluniacs rapidly grew rich and inclined to ostentation. A century and a half after the foundation of the Order, Saint-Bernard already reproached them with their princely and luxurious way of living, with the Abbot's three-score horses, his escort of honour, and his magnificent buildings. They were soon to act as hosts to popes, kings and emperors. Then, by way of reaction, the rival institution of Citeaux established itself opposite the Cluoy building, and, to heighten the contrast between the two orders, imposed upon itself, from the outset, strict principles which however were quickly relaxed. Yet the antagonism between the black friars at Cluny and the white friars at Citeaux did not cease to exist. Twenty years later the latter in their turn had grown so rich and powerful that they owned eighteen hundred monasteries and fourteen hundred nunneries. Once more the austere pastor of the Crusades became alarmed at such prosperity just as he had formerly become indignant at the Cluniacs' splendour.

In 1340, the monks of Cluny had recently acquired the

antique building of the Thermes in Paris. On the site of this construction Peter of Chalus, twenty-first abbot of the order, caused to be built, not a convent, but an abbatial mansion called the « House of the Thermes » (*Maison des Thermes*). A century later, his successors owned two more *hôtels* in the neighbouring rue de la Harpe, one of which bore the sign of the « Escu de Bretagne »; for houses, in those time bore not numbers, but a distinctive sign, frequently carved or wrought. Under Louis XI, Jean III of Bourbon, the forty-second abbot, undertook works, the exact nature of which has remained unknown but which doubtless suggested those which his successor was to resume and carry out. The present dwelling was only built during the reign of Charles VIII, by Jacques of Amboise, proof of which is furnished by the carving on a capital of the gallery built under the chapel, where the coat of arms of the abbot Jacques is to be seen in juxtaposition with the initial of King Charles, a gothic « K » surmounted by a royal crown. The former's abbottship having begun in 1485 and the reign of the latter ending in 1498, the erection of the hotel must have taken place between these two dates. The Abbot Jacques of Amboise was brother to Cardinal George of Amboise, minister of Louis XII. A few years after one of the brothers had built the « Hôtel de Cluny », the second in his turn built the magnificent château of Gaillon, not far from Louviers. Even as Jacques had devoted to the erection of this mansion part of the fifty thousand angels which England had paid, so did George set apart for the work at Gaillon the moneys paid as a fine by the city of Genoa to the French King and granted by him to his minister. Again, as the château at Gaillon became the country-seat of the archbishops of Rouen, so did the « Hôtel de Cluny » serve as a temporary residence for the abbots of the Order and their guests.

It was usual then for high personages and powerful families, whose ordinary abode was their château, to possess some dwelling-place close to the king, whereof they availed themselves either for their own use or that of their

friends. Hence the etymological meaning of the word « hotel » or « hostel », namely, the house of the *host*. But the hospitality thus offered was not always disinterested; the manners of the xivth century permitted these lordly hotels to become, through being let, a source of income for their owners. The practice seems to have continued for some time, but finally fell into disuse. The first person mentioned as having received hospitality here, either free or paying, is Queen Mary, the sister of Henry VIII, king of England, and third wife of Louis XII.

Twenty years later, in this same hotel, Francis I received James V, King of Scotland, who was then engaged to his daughter. In the XVIIIth chapter of his « Pantagruel », Rabelais mentions Thaumaste, an Englishman, who while staying in Paris ordered a drink from « the porter of the Hotel de Cluny, where he was lodged ». This quotation induces the belief that the ancient custom of letting rooms had not been abolished by the middle of the xvth century. Further we find in 1584 a still more direct proof: when Claude of Guise was abbot of Cluny, part of the hotel was let to a company of actors who set up their stage in one of the halls. The scandals which took place rendered necessary an order of the *parlement*, dispersing the company.

From 1600 to 1681, the Hotel de Cluny served as residence for the Pope's nuncios. Mazarin lived there before he became chief Minister. After these prelates, unknown tenants followed for half a century; then came Delisles, an astronomer, in 1748; an attorney in 1768, and a printer in 1771.

At that time the chapel was divided into stories by a flooring which probably rested on brackets. However, even if the abbots of Cluny had long ceased to occupy this residence, they still remained the owners of it, and an emphyteutic lease, dated 1789, is a proof thereof.

During the Revolution, a committee held its meetings here; the statues were smashed, the shields defaced and the artistic woodwork of the chapel was used to make a bonfire in the courtyard itself. The building became

national property, but was soon re-sold (for 92.000 francs), and passed from owner to owner. The chapel was turned into a dissecting room. In other parts of the building appeared a bookseller and a laundress, and in the Thermes a cooper. The top of the tower having become an observatory let to the Admiralty, was used by the astronomer Messier who studied the heavens therefrom for half a century, and discovered twenty one new planets.

Finally the architect Albert Lenoir, (the son of Alexandre Lenoir, the founder of the Museum of National Antiquities) conceived the idea of uniting the three adjoining buildings viz : the Palais des Thermes, Hôtel de Cluny and the Convent of the Mathurins (since destroyed), in order to establish a vast museum devoted to French History. The plan was only realised after a ten years' effort. In 1843, the State bought back the Hôtel de Cluny for 390.000 francs and the municipality presented the government with the Palais des Thermes. M. Alexandre du Sommerard's collection, which was bought at the same time, then contained fourteen hundred objects.

This collection went to form the nucleus of the Museum which was inaugurated on the 16th of March 1844. At the present day, the exhibits number over twenty thousand.

FIRST PART

TIMES and IDEAS

Times and Ideas

In order that a preliminary study may be made of the periods taken as a whole, and of the styles which characterise them, monumental sculpture is shown first in the following order :

- A. **SALLE DES THERMES.** From the Roman conquest to the end of the xivth century.
- B. **PORCH UNDER THE CHAPEL.** xvth century and beginning of the Renaissance.
- C. **ARCADES OF THE GREAT COURTYARD.** xvth and xviiith centuries.
- D. **VAULTED ARCHWAY OF THE GREAT COURTYARD.** xvth and xviiith centuries.
- E. **GARDEN.** — Various periods.

A. — “SALLE DES THERMES”

In the Salle des Thermes is displayed the sculpture of the Gallo-Roman and Romanesque epochs, and of Gothic art down to the end of the xivth century.

GALLO-ROMAN PERIOD

(From the 1st to the IVth century)

THE geographical situation of France, as a kind of crossroads, destined it to be the meeting point of migrations from the North, the East and the South, and its inhabitants to be a mixture of races. These circumstances were normally bound to affect the spirit of the people who were gradually fashioned by each successive change. Modern science labours to prove that advantages and specific defects are inherent in the cross-

breeding of plants, animals and men. Even to this day, it is easy enough to find in the French provinces, ethnic or moral survivals of ill-assorted heredities prevailing here and there. It is legitimate to believe that the origin of both the genius and dissension of this country lies in this diversity of our constitutive elements, which was in itself so rich in humanity.

Who were first occupants of the land? Are the French megalithic monuments the work of the Celts or of still more ancient aborigines? Opinions differ, for the oldest relics only date back to fifteen centuries before Christ.

In those days a branch of the Aryan family, the Gaels (or Galates, Gauls) inhabited the country; on countless occasions their venturesome tribes crossed the Pyrenees and the Alps, now conquering one half of Spain, now subduing and capturing Rome, marching across Italy, ravaging Greece, reaching Macedonia and Thrace, going still further to terrorise Asia Minor and found Galatia.

The Gauls were tall and fair, valorous and loyal, fine-spoken and presumptuous, sharp-witted, assimilative, and eager for information. They loved fine apparel and jewels, but they fought naked, through pride, and scorned death inasmuch as they believed in the immortality of the soul. Six hundred years before our era, Aristotle and Pythagoras quoted them as standing out foremost amongst men for their moral virtues and their philosophical ideas. They were taught and governed by their priests the druids, they had neither books, nor temples nor idols and they worshipped their gods in sacred forests.

And yet this independent, virgin Gaul with such promise of fecundity was torn to pieces by internal wars, just as Greece had been, and she died, like Greece, at the hands of invaders, thus causing the individuality of her noble people to perish before showing its full worth. Already the Phocæan colonists had founded Marseilles (600 B. C.), and even the Romans had attempted an avenging incursion into the Senonian district. A second time (in 129 B. C.), their legions crossed the Alps and established their first province on conquered land; hence the name of « Provence ». Finally, Julius Cæsar appeared and made his way to the North (59-51 B. C.). Roman civilisation easily and speedily implanted itself amongst a race greedy of novelty and luxury, and which possessed an artistic inclination. A new Gaul sprang up and grew magnificent. It was covered with monuments and villas, bridges,

roads, carvings and statues, the works of a purely Roman art, on which the native art had not set its mark. .Olympian gods intermarried with local deities, creeds were mixed up, Western and Northern legends became interspersed with figures and fancies from the East. As early as the middle of the 1vth century, Gaul was so thoroughly romanised, that the Emperor Julian could conceive the twofold dream of transporting to Lutetia the official see of his empire and restoring paganism in it (361). At the same time, a new god was approaching this country. Saint Martin preached christianity in 372; but in the face of this spiritual invasion a more terrible one was imminent already.

As an eagle watches its prey, the Barbarians from over the Rhine were watching that Gallic prosperity which proved so tempting both for its riches and its climate, yet was undermined by abuse of pleasures and excess of taxes. A tremendous raid marked the beginning of the vth century. Gaul was destroyed at one stroke. The conquerors settled down. Other elements were to follow in their train; but already the three essential factors : Gallic, Roman and Frankish, were about to unite and build up a new nation.

A long toil and a grievous one! The Gallo-Roman world had lasted four centuries; five more were needed to revive the desert which the hordes left behind them : the forests grew again and were peopled with wild beasts.

In the middle of the room :

Four gallo-roman altars of stone, found in 1710 in the island of the Cité under the choir of Notre-Dame de Paris :

Altar, known as the Dedication Altar. The upper portion of a votive monument, representing the homage rendered by the Parisian watermen (Nautæ Parisiaci) to the Emperor Tiberius (14-37 A. D.) The emperor, who is receiving them, is seated, crowned with a laurel wreath and assisted by two Roman dignitaries. One of the sides bears the inscription : TIB. CAESARE. AVG. IOVI. OPTVM (O) MAXVMO. V... NAVTAL. PARISIACI. PUBLICE, POSVERVN (T).

Altar, known as Jupiter's. A massive piece of masonry consisting of two superincumbent portions, the four sides of

Above the baths :

Two springings of an arch in the shape of a boat, symbolising the City of Lutetia or the Parisian watermen. (Nautes Parisiens).

MEROVINGIAN PERIOD

(from the Vth to the VIIIth century)

A chaos. The Huns have passed (451). Clodius, Merovius and Childeric have bred Clovis. Clovis, after crushing the last of the Romans, triumphed over the Saxons, the Burgundians and the Visigoths. He was christened and founded an empire that did not last (511); nothing could survive in that dark, atrocious age in which history only depicts a confused mass of wild beasts roaming aimlessly. Killing was rife everywhere, murder being the only logic. Men slew one another whenever they met, either in towns or in the country; in princely families rival interests were settled with the dagger. Be they conquerors or vanquished, the masters were like wild beasts and the serfs like beasts of burden. Throughout the vth century things were the same; in the vith they may have grown worse, and in the viith they remained unchanged. By means of its bishops, the Church vainly tried to humanise these ferocious animals. It was useless for Dagobert (628) to show both greatness and firmness. Whoever had some soul could only find shelter in the cloisters; but even then, this only meant banishment and precarious safety. The idle Kings slept in their palaces up to the middle of the viith century, when they were awakened by a great shock to which they succumbed.

It was Arabia this time that came towards us, Mohamed had been born at Mecca in 571 and, under the Koran, the fanatical tribes met together, united and set out to conquer Syria, Persia, Egypt, Northern Africa, Spain and France. At Poitiers, the Frank and the Mussulman, the Cross and the Crescent, stood face to face for the first time (732). They struggled from the time of Charles-Martel to that of Francis I and it may be considered that the day of the Poitiers battle, on which two races clashed, each with its own god, is memorable by the fact that it showed the existence of a Western religion and demonstrated the unity of mind that was the outcome of it.

In the vaulted hall, in the South East corner of the « Salle des Thermes ».

Seven capitals (marble), very probably Eastern work imported into France and used in the Merovingian basilica of St. Denis

CAROLINGIAN PERIOD (IXth and Xth centuries)

THE son of Pepin the Short put body and life into the monstrous mass which had grovelled for nearly four centuries. For such a work he first of all required strength, since right went to the strongest; not only was this the best doctrine in those times, but it was the only one. Unity was obtained by means of arms. In order to protect what he had constructed, Charlemagne relied upon two moral authorities. One of these was dead, but as its prestige still existed it could probably come to life again. The other, then only nascent, was destined to govern the masses. These authorities were the Roman Empire and the Gospel of Christ; that is, human laws and a law divine. Charlemagne restored the former and set up the latter. The untiring efforts of the Bishops, who had worked from the day of Tolbiac (496) to civilise the new world, finally met with success in 800 when they caused a Christian Emperor to be crowned in Rome.

He assembled beneath his sword all the peoples from Rome to the Baltic and from Bohemia to the Pyrenees. The sub-divisions of so vast a domain more or less followed those of the ancient provinces of Caesar. The administration was entrusted to dukes (*dux*, general) counts (*comes*, companion) and marquises (*marches*, border provinces) and this was the embryo of Feudalism. These governmental provinces were superintended by the Envoys of the Master (*Missi Domini*), one a clerk and the other a layman. The master was surrounded by advisors; but the dukes and bishops, the counts and abbots held their consultations independently in their Councils, and thus it was that a hierarchy became established to the detriment of ancient equality. For the custom formerly prevailed amongst the Franks to allow every free man to take part in the deliberations. Charlemagne, the Master, regulated military service; he compelled the priests to piety, charity and study; he reformed the discipline of the

monasteries, created the tithe (one tenth) for the benefit of parishes; he founded schools and encouraged literature; he built bridges and basilicas, and dictated his Decretals. He possessed a genius for order, and he imposed it. When he died he could truly believe that he had founded a world (814).

And yet, he had only built up a system; for a thousand years after his death, the memory of his colossal effort inspired all those who, as he did, aspired to unite the West under the rule of one master. The task was always precarious, as its ambition clashed with the irreducible hostility of races which were too ill-assorted. No sooner was the emperor in his tomb than the dismemberment began.

With Louis the Debonair, the principle of authority collapsed; with his sons, the unity of the State was divided into three parts, viz: France, Germany and Italy. Already France itself was beginning to split up and subdivide; hereditary fiefs created territorial autonomies, and hereditary offices overthrew the central power.

The integrity of the land was no longer even defended. The Norman pirates came and besieged Paris (885); they demanded a province, established themselves there, and gave it their name (911).

From the beginning of the xth century, the king was no longer master of his own domain. Just as the last Merovingians had come under the tutelage of the mayors of the palace, so did the Carolingians, who were dying out, come under the hand of the Dukes of France. They lacked both land and money. In 946, Louis d'Outremer possessed but one fortress, Laon, and this was taken from him. He called foreigners to his aid, and by so doing became a foreigner himself. At the end of two brief generations the race became extinct (987).

But another was about to spring up, which would benefit by the disciplinary education which Charlemagne had given his peoples. The imperial idea was revived in the form of royalty, and the task of the Capetians became one of realising in France the unity which Charlemagne's ambition had sought to establish in the West. We pass from the great to the small; yet from an idle fancy we also pass to the possible. Although the task was reduced, the kings found it still difficult and long, for it was started in 987 and it only ended in 1477.

From Hugues Capet's accession onwards, these two great forces confronted and set each other at defiance. The ques-

tion which the struggle of royalty against feudalism had to resolve was whether France should be united to make her strong, or divided to keep her powerless. Was she to be one nation with one chief, or to remain a collection of disconnected provinces with hundreds of masters? Was she to form a people, or mere heirlooms and dowries? The question was a vital one and the struggle lasted five centuries.

But yet another problem needed a solution, which was more urgent and momentous still. Before constituting a people, it was necessary to shape men worthy of this title and to give them gradually an intellectual and moral education. At that time, however, intelligence and morality existed only in the Church; and under her protection alone could those exceptional beings, the pioneers of civilization, then live.

To understand and judge the psychological drama of that period, two elements must be taken into consideration: on the one hand, the world of laymen, eager for battle, and on the other, the clerical world, a disciplined and homogeneous body, eager for peace.

The former was a kind of barbarian encampment where chiefs alone counted, and in which the transfer of property only took place either by inheritance or crime. Men with desperate desires killed each other and trod under foot the ignoble mass of serfs. Among the clergy spiritual tasks were sought for, privileges of birth counted little or not at all. Titles and powers went to the most deserving, by election, and a man of genius, were he the son of a serf, could rise to the highest positions, and set his foot on the brow of kings and emperors.

How were these intellectuals, few in number and weaponless, going to impose themselves on such brutes and guide them? By what prestige was a bishop, armed only with a pastoral crook amongst swords and axes, going to subdue might which was stronger than right? How was he going to introduce an ideal into this savagery, in order to spiritualise it? The mere teaching of a doctrine would be misunderstood; owing to the state of intellect, no hope could be entertained that these moralising influences could enforce themselves unaided and move

childlike generations were superstitious rather than truly religious; the Church could only impose some degree virtue on them, by setting it between two terrors or damonations; ooe to come, but eternal, the other immediate but no less frightful; namely, hell for the dead and excommunication for the living. An excommunicated person would no longer have any soul, family or friends; cut off from all human society, he was reduced to the level of a hunted beast and defiled the air he breathed. He was pestilence itself, and even to see him from afar created fear.

Thanks to these two arms, the Church became all powerful. She was, in truth, the only undisputed power of the ixth century, the only one which made itself obeyed without question. The bishops imposed on all, without distinction, the authority of their judgments, penances and fines. The fines, numberless as the crimes, enriched the Church with incredible speed, and she alone was able to possess property without peril, or nearly so, for she took care to put her riches under the protection of the Saints. The redemptions she demanded for faults were not offered to men who perish and could be robbed, but to the tomb of some Saint who would consecrate this treasure and defend it. Every person before dying made their expiatory bequest to the relics of some celestial protector and by so doing bought his intercessioo. In this way, the relics were not long in becoming the owners of ooe third of country: no heir dared to claim any patrimony whatsoever which was thus protected by excommunication and Hell. The Pope became supreme, and the Church could henceforth give moral laws.

However, this ingenious victory of mind over matter was not always going to bear fruit; one fault compromised it and hindered its benefit. In the middle of the xth century a Pope reconstructed the Germanie empire (962). From thence onwards the princes of the Church were but the creatures of this revived power; the Emperor appointed the Pope, the bishoprics and abbeys being the only non-hereditary fiefs. The privilege of investing the bishops and abbots passed to the paramount laymen who bestowed the offices as rewards, or sold them to the highest bidder, without even considering whether the holder had received holy orders or not. Thieves and robbers donned the mitre.

A recrudescence of savagery characterised the end of that

century which was thought to be the last. The year One Thousand approached, and it was believed that in that year God would destroy the earth. A haste to enjoy life, mingled with the fear of the Judgment Day, spread terror over the age. The civilising efforts made by the bishops in the ixth century miscarried in the xth, even as that of Charlemagne had previously failed. In the following century a third attempt was undertaken by the monasteries which tried to save the world. For a time their industrious gloom was the last refuge for human thought.

To what kind of art could these periods lay claim? When Charlemagne built, it was with a view to durability, and his rare monuments testify to massive strength without an ideal. Besides, this lack of taste found elegance only in luxury; jewelry was as barbarous as the race itself and soul was absent from it. As soon as France, superstitious as she was, became truly Christian, her faith revealed her soul.

Already she had an embryonic language; the oath of Strasbourg, in 842, marked the apparition of the hybrid idiom which later became the French language.

At the bottom of the stairs :

Base of pillar (?) decorated with gadrooned craters (Roman cups) and foliage.

In the small vaulted chamber :

'Sarcophagi of stone, from the Gallo-Roman, Merovingian and Carolingian periods. For the most part the result of excavations in Paris.

XIth CENTURY

ORDINARILY, centuries constitute conventional enough divisions. It would indeed be surprising if the entry into a new century should coincide exactly with a modification of facts or ideas. The xith century is the only exception; of a truth it may be considered that the modification took place at the accession of the Capetians (987); but it is no less certain that psychologically it commenced on the morrow of the year 1000, and that at that precise date there began a new era. Indeed, in the year 1000 the world should have come to an end; a mistaken

interpretation of the Apocalypse had given credit to this prognostic. Gratitude towards God moved to enthusiasm the Christian world which its Saviour had spared from destruction. Men henceforth dared to erect durable temples which could not have been built when everything was to perish. But their mind is still impressed by the terrors which accompanied its birth. From birth this world is visionary, fright haunts it and it only dreams of Hell. Everywhere the enemy, which is the devil, is seen. To fight against him and serve God, they invented the Crusades, for the pagans were only devils incarnate; the colour of their skin is a proof vouchsafed by God, who tolerates them, yet suffers thereby and abides His time.

However, towards the middle of the century this morbid anxiety of men's souls began to relax. The pagans of Antiquity, demons in their turn, already inspired less terror; people dared to read their works, timidly it is true, expurgating the texts, paring them « like nails » and falsifying them unhesitatingly and without thought of harm; for four centuries at least the practice hardly ceased. All the same, by frequenting men of genius, an education of thought gradually took shape. Through contact with the antique world, a phenomenon similar to that which occurred four centuries later tried to take place then, and partly miscarried. The general mind was not yet ripe, but philosophically, in letters and in art too, a first Renaissance was brought about at the end of the xith century. Anarchy became weaker; a small France got together and worked to organize itself, emancipated at last from the protection that came from the other side of the Rhine. For the first time, France became self-conscious and aware of her homogeneity: a notion still vague, but very apparent in the « Songs of heroic deeds » (*Chansons de Geste*) whose composition dates back to that time. On the other side of the Channel, a new England was likewise being created by William the Conqueror (1066).

At the same time the Church, infected by elements foreign to herself, became master of herself again. The reconstitution of the Germanic empire brought about her downfall (962), and the disorder lasted a hundred years; evil-doers obtained the mitre, by buying, conquering or taking it by force with the sole design of oppressing the people; vices of all sorts were crowned with the mitre. The Holy See had a Pope eleven

This Fatherland developed more and more. Philippe-Auguste already was able to speak as a sovereign and stand forth as such before his vassals, as he did before Frederic Barbarossa and Richard the Lion-Hearted. In the third Crusade (1189), which allowed her to divert and control the turbulent forces of nobility, France took the lead at the head of the other countries.

Artistically, France only derived her inspiration from her neighbours, nor could she do otherwise, for until a moral formation is realised, how could it bear fruit? France's soul was being fashioned, but the task was not accomplished. After the apostleship of the Gauls came that of the Franks, which had lasted from the time of Clovis and was hardly ended. This new world learnt its art from another; the Church and the Crusades brought the imperial Byzantine art, and the country copied whatever was shown to it.

What then was shown? The East, by way of reaction against pagan idolatry, had but recently broken all the statues, therefore it neither could nor would make them again. To carve images in the likeness of sacred persons would seem a profanation and a return to the errors of the past. They only dared to paint miniatures in books, in enamel on the shrines or altars, and in mosaic on the walls. This last process, above all, was pleasing to the eye on account of its sumptuous richness which showed up in the shadows of the basilicas. And yet the figures remained hieratic, for respect forbade them to be humanised. Exactly as they were presented to their naive admirers, so they were copied. But France was already by instinct what she was going to be later on, supremely a people of architects and sculptors; the copying therefore was done in stone. Since designs only were shown them, French sculpture was at first only a design, deeply engraven, but practically without relief. Under the draperies there was no body, for they had been told there was no need for any. However the carvers soon rebelled. The figures were stiff and rigid with a fitting expression of devotion; they were long, lank and tightly draped in their robes with close-fitting folds, which looked as if they had been dipped in water.

The Art of that period has been called Romanesque, but this is an inappropriate and even unfair denomination. If it may be applied to the southern provinces of France, it no

longer holds good for the art of the Ile de France and the surrounding provinces, for indeed there was a profound difference between the two styles produced north and south of the Loire. The South, which was more latinised and in which remains of Roman statuary existed in large numbers, was happily inspired by it. Even then, it was only a supreme decline of the antique, the end of an agony and the death-knell of something that had been. In the North, it was a beginning, a prophecy, and the cradle of what was to be. France was soon to create her own art, and impart it to the world.

Against the southern wall of the « Salle des Thermes » :

Capitals and fragments of abaci decorated with animals and foliage. First half of xiiith century ; from the choir of the ancient abbey church of St. Geneviève (demolished 1807).

Two capitals coupled and joined together, decorated with fantastic animals and foliage ; xiiith century.

Fragments of a pilaster decorated with beaded ribbons, interlacings and foliage. Middle of xiiith century, from Cluny monastery (Saône-et-Loire).

Fragment of a balustrade, of the same period and origin.

Two coupled capitals decorated with fantastic birds and foliage. Second half of xiiith century ; from the ancient cloister of the abbey church at St. Denis.

Capital decorated with leaves of acanthus, fruits and human heads. Second half of xiiith century ;

Capital, engaged, decorated with foliage. Second half of xiiith century. From the Priory of St. Martin-des-Champs, Paris.

Towards the north-east corner of the « Salle des Thermes », on the right, descending the stairway :

Saint Marcel under a canopy ; a pier from the St. Anne doorway of Notre-Dame de Paris, end of xiiith century.

XIIIth CENTURY

IN spite of the horrors that fanaticism aroused (Crusade of the Albigenses, 1209), and the moral decline observed with indignation by the bishops amongst the lower clergy and monasteries, this century was magnificent. It counts as one of the most stirring and fruitful ones in French history. It saw both national sentiment and national art come to light.

Two great factors marked their birth. At the beginning, under Philippe Auguste, the battle of Bouvines (1214) finally delivered the country from the threat of a German invasion. This menace, which had ever been present, had weighed on the Gauls from the time of Caesar. Towards the end of the century, the old dream of the Crusades died out with St. Louis (1270), and the French returned to their own country. France now lives, for she has become self-conscious, and at the same time she creates an art. A revolution was about to take place in the ideas of the Christian world, and a dazzling one too. It was in France that it took shape. The documents which bear this out are Notre-Dame de Paris, the Sainte-Chapelle, and the Cathedral of Reims. Cologne cathedral was only going to be a feeble imitation of Amiens.

In what did this spiritual revival consist? In the days of Greece and Rome, paganism deified the forces of Nature, and all instincts became gods. The victory of Christianity banished to Hell these ancient divinities, who became devils. In order to suppress the desires of brutal instinct, the new law made sins of them, and Nature was henceforth Satan's own domain.

But it so happened that the most pious, mystic, and idealistic of all the centuries ventured to turn towards Nature which had so long been condemned, in order to admire and love it. It so happened that the century which is reflected in the gentle faces of St. Francis and St. Louis took nature back from the devil in order to restore it to God. Suddenly that century perceived the smile of Nature, which had almost been forgotten since Virgil, and extolled it with tenderness. At the same time, another smile was seen and this was on the face of Woman, who, since her adventure in the earthly Paradise, had remained the worst abettor of the Tempter.

Two smiles after a thousand years' sufferings. Man welcomed and took to himself these sweet flowers, and he made them

THE VIRGIN AND CHILD.

(French Art, XIVth century)

both divine by carving statues in their likeness. On the soil which nourished him, he knelt and eagerly gathered the growing grass and flowers, to decorate the walls of his church. With clay from his native land he built up a house for his Saviour, and thenceforward the divinity which thereto had been a terror to him was sweetened with a woman's glance.

The guardian Virgin and her escort of angels, replacing the lowering figures of the xiith century and smiling for the first time, brought a promise hitherto unknown and a possibility of hope to the misery of the people. The images of saints became human. After being hieratic and almost incorporeal up till then, they deigned to take really human forms, as though to come nearer to us. About them, all the native flora, which had been lovingly carved in native stone, took the place of the Romanesque designs, which, after all, were in this country mere copies from the antique. Orchard and kitchen-garden plants, images of the field that nourishes man and feeds beasts, became sanctified by entering the church. The panels of Rheims look like the pages of a French herbal; they are pages of prayer, gratitude and adoration also, a peasant's hymn to a fruitful soil, the first hymn which the French people had ever sung in honour of their native land. These flowered panels and xiiith century capitals are family relics and commemorate a solemn moment in French history, namely, the creation of the Fatherland. At the very same stage in his gradual evolution, the French peasant had discovered both Fatherland and Nature. The divine nature of the one was apparent to him as the consequence of his understanding the other.

How did this affectionate comprehension come to him? This may be imagined. The Crusades were at an end, after having lasted two centuries. They had cost much, but yielded nothing. Oriental art had been seen and was at first copied. But exile also had been endured beneath a relentless sky, in a yellow desert and amidst a dry death. On the return, the native land appeared delightful. When man found his soil again, he understood that it was not accursed, but on the contrary that it was blessed, and he realized that it was dear to him. In foreign climes, he had been able to admire capitals adorned with carvings of acanthus, and the leaf had pleased him. But a cabbage leaf was still more beautiful than an acanthus leaf; doubly so even, both for the majestic virtue of its form and for

its nutritive virtue. The clover leaf also is beautiful, being so flexible in the breeze; besides, it feeds cattle. Man gathered a cabbage and a clover leaf, he weepingly caressed them and fashioned them in stone; thus Gothic art began.

The modern term « *Gothic art* » is incorrect; the Middle Ages were more precise in saying « *Opus francigenum* », that is: a work originated in France. The Germans themselves called it so at its birth, and the name was justified, for that particular art was derived from the French intellect, it marked the zenith of French thought. Not only did it proclaim Faith by aspiring heavenwards, and Hope by its multiplied smiles, but at the same time it symbolised man's gratitude to his Land. This gratitude is apparent in the turrets, flowers, crockets, copings, rose-windows, ribs, arch-springings, and in every stone. The new art joyfully symbolised the union of a thoughtful being with the thing he is made of. By glorifying the soil and that which springs therefrom, that art heralded the coming of a new nation which was already that of the Fatherland.

Likewise on the practical side the XIIIth century possessed initiatives which inaugurated a new era. The Crusades provided a means of contact with the old civilisations of the East. Precious knowledge was gained thereby, together with a desire to be and to do better, a need for progress and a sense of hygiene. Eastern works were brought back to France, an imitation of them was undertaken, and trades were immediately set up; manufactures were founded and corporations organised. The mixing of the two races had revealed the benefits derived from an exchange of goods and merchandise; consequently, commerce came into being. The circle of connections and transactions grew, the first bank was created at Provins (1256); the first stage-coaches (1278), the Gabelle is first mentioned (1240), and the Customs (1290). Etienne Boileau reorganized the system of corporations and drew up rules for the Parisian trades. The first Royal Library (1236), and foundation of the Sorbonne (1253), Arabic numbers were introduced (1202), and Villehardouin wrote the earliest French prose (1210).

In the political world, the reform was no less important. Through a series of foreign expeditions, the feudal lords fell into debt and were ruined. The king took advantage of this to strengthen his domain and forbid private wars. He superintended and regulated the use of seigniorial coinage. He

abolished judicial duels and replaced them by evidence. : Jurisprudence arose in opposition to feudal justice, and gave rise to a sect of jurists who brought to light again texts of the Roman empire. These jurists, by dint of institutes, shook the edifice of feudalism. At the same time, the middle classes bought privileges, lands, and new rights from the impoverished lords. First Parisian municipality (1220) ; first mention of a Parlement (1239) ; Philip III granted a patent of nobility to a silversmith, saying : « The king has cognizance to ennoble a man ». This was a new principle which already lessened the privilege of a caste hitherto closed, and which henceforth was open. The people emerged from gloom, and peasants' names entered into history. But the atrocious misery of the xivth century hindered the impetus taken by this new life.

In the North-East corner of the hall, on the visitor's right, when descending the steps :

Two fragments of a Resurrection of the dead ; high-relief. First half of xiiith century. From the outer decoration of Notre-Dame de Paris (door called the Last Judgment door, lower portion of spandrel).

The Virgin and Child, statue. First half of xiiith century. From the abbey of St. Germain des Prés.

Decorative Head, projecting from a moulding. Middle or second half of xiiith century. From excavations in Boulevard Sébastopol.

The Three Wise Men of the East ; a mutilated group. Second half of xiiith century. From the outer decoration of Notre-Dame de Paris.

Twelve mutilated statues. Second half of xiiith century. From the outer decoration of Notre-Dame de Paris, mostly from the St. Etienne door, on the south side of the cathedral. Having been smashed during the revolution, they were removed to rue de la Santé, towards the top of Faubourg St-Jacques, where they served as boundary stones until 1839.

Ten arch springings decorated with foliage. Late

xiiith century. From the chapel of Cluny College (Paris), destroyed 1859.

In front of the swimming-bath :

An angel, statue. Late xiiith century. From Poissy abbey (Seine-et-Oise). This figure, a contemporary of, and closely related to, those which adorned the cathedral of Rheims, is inspired by the same spirit and expresses it by the same smile.

Sepulchral stone of Louis and Philippe of Alençon (died about 1275), grandsons of St. Louis. Sculpture in high relief. Last quarter of xiiith century.

Funeral stone of a French Crusader (Brocard de Charnie), carved in an antique pillar. (Marble). French art in Cyprus, xiiith century. From Larnaca.

At further end of the Hall, on the left (six steps down) on the walls of a small vaulted chamber :

Eight Hebrew stelæ, bearing funeral inscriptions. Found in Paris in 1849, between rue de la Harpe and rue Pierre-Sarrasin, on the site of a Jewish cemetery of the xiiith century.

XIVth CENTURY

SOCIAL transformations hardly fail to bring with them unforeseen drawbacks as well as desired benefits. Not only did the fair hopes of the xiiith century miscarry in the xivth, but also the very reasons of its prosperity bred a series of formidable consequences. The spirit changed and history rolled on. Gold made its appearance and superseded declining idealism.

The final failure of the Crusades had left disillusion in its train; the prestige of religious authority suffered thereby at a time when it most needed the restraint provided by that authority. Therefore the moral level sank low, the papacy declined, schisms and licentiousness spread. Christian nations had fought side by side against the Infidel, but when that common enemy no longer existed, they turned against one another (Hundred Years' War). Our incursions into the East had given

us a taste not only for art, but also for luxury. Industries and commerce were in their infancy and the first banking notions had been evolved; but at the same time there were revealed the need for gold and the power of gold.

This power made itself apparent in everything. The successive defeats at Courtrai, Crécy and Poitiers, together with Edward's guns, threw discredit on chivalry. These defeats also showed the necessity for fighting, like the enemy, with new methods, that is to say, with infantry. Now that infantry was mercenary, gold was once more needed to hire it. Whence was it to be obtained? The king tried to centralise power at the expense of feudalism which was daily declining, but pecuniary resources were lacking. Where was the king to find them? The people were not in a position to give anything, for they had been reduced to extreme misery by the continuous pillaging of the English and the Brigands. The only rich possessors were the Church and the Jewish or Lombard brokers. The latter could easily be despoiled by means of torture and the debasement of the coinage, which affected them much more than it did the lower classes. The property of the Church was indeed more closely guarded; but the covetousness which it bred was all the stronger and it obsessed all the century. Early in the xivth century, Philip the Fair ventured on first outrage by despoiling the Templars. Charles V, through the agency of Duguesclin, dared a more serious one when he ransomed the Pope himself, and the hero of a popular ballad is made to say that he would accept « no money but that coming from the Clergy ».

Thus the Church was no longer respected, either by kings or princes, or by the people who followed the examples set by those above them, or by the Church itself. In 1303 the very Pope himself was scoffed at, humiliated and end-gelled like a serf. Dante, who was pious but a Ghibelline, cast this Pope, Boniface VIII, into his Inferno. Six years later, Boniface's successor was « pent up » in Avignon and held as hostage by the king, who used him for his own ends. When the Pope and the king of France launched the idea of a new Crusade, it was only a contrivance meant to extort the people's money and to turn it to their own profit. Then all at once Christianity found that it had two sovereign pontiffs who were antagonists and harassed each other with insults and denunciations. Meanwhile the Papal

court at Avignon fell into a condition which Petrarch has described with horror. « A sink of all vices and all villainies where the hope of a future life is considered as a vain illusion and Jesus-Christ classed as a childish invention. Chastity is esteemed nonsense, and prostitution leads to celebrity. I pass over in silence simony, avarice, insolence and cruelty. » Pope Gregory XII in his bull *Admonet nos*, and Jean Gerson (the probable author of the *Imitation*), likewise acquaint us with the amazing immorality of the French and Italian monasteries and nunneries. The people revolt and grow restless. Protestantism dawns in England with Wycliffe (1370), in Germany and Italy with the communistic institution of the *Petits Frères*, whilst revolution itself dawns in Rome with Rienzi's Republic (1347) and in France with the Jacquerie (1358).

The respect for nobility too is on the point of expiring. They had allowed themselves to be beaten by the uncouth English and Flemish. On the morrow of Crécy (1346), the Continuator of Nangis jeered at the luxury of the lords, laughed at their long tight-fitting hose and short tunics! He made bold to write that these garments were « just the thing for fleeing from the enemy ». In the cottages, it was repeatedly said that the castle and its retinue cost very dear and were of very little use to the middle class man who, after all, paid them to defend him. It was constantly said also that these noblemen in their splendid armour were not invincible, since a host of rustics armed with knives had been able to kill them off quite easily like mere cattle. Could we not do the same and rid ourselves once for all of these our masters, the people wondered? The Jacques revolted, massacred, and burnt. « It was thought », Froissard says, « that the whole of gentility was about to perish ».

If they did not, they were not much better off, for they only escaped destruction to sink into turpitude. It was the same all over Europe; that which did not fall, tottered. Everywhere faith was blighted. In the upper classes, crime triumphed and vice spread; the decision of princes was dictated by their own personal interests. In the lower classes misery was rampant, famine and plague, the double consequence of those endless wars, had decimated the panic-stricken population (the sect of the *Flagellants*, 1349). A spirit of madness took possession of ideas as well as manners. To what could they cling? The world was empty and the cen-

tury, which had started with a swindling king, symbolically ended with a mad one. Thus, after the acme reached by the xiith century, the xivth was, strictly speaking, an age of dislocation, just as the xvth became one of reconstitution.

Is it astonishing, therefore, that art should then have lost in grandeur and majesty what the soul had lost in nobility, and morality in aspiration? Art originates in the people, whose ideal it formulates. When the people possess a faith of any kind, the work they build up is a work of genius. The day on which that ideal dies, talent only remains. Genius loves the joy of effort above all; but talent only aspires to the joy of results. Therefore whereas the xiiith century had invented, the xivth was content with imitating and brought art down to its own level. XIIIth century art worked for the people and its creations decorated the City, whereas xivth century art worked for the rich and its efforts decorated furniture. Besides, it suffered too much, and at too many crises by far, to be able to give itself up to great works; when it did make the attempt, it showed technique in place of emotion. It was happier in the minor arts, for it was a subtle and a searching age. Its predecessors had been poets in stonework; but itself was a goldsmith.

In the South: East corner of the hall, on the left of the visitor who descends the staircase :

Adam, statue. Beginning of xivth century; from the exterior ornamentation of Notre-Dame de Paris, (balustrade of the Gallery of the Virgin at the foot of the North Tower.) A companion statue of Eve has been destroyed. The present one itself shows numerous restorations.

Five statues of apostles. Executed by Robert of Lamoy and William of Nourriche between 1319 and 1327. From the church of St. Jacques-l'Hôpital, Paris.

Foundation stone of the Celestines' Church, Paris (laid by Charles V, May 26th 1365).

Close by, in the small vaulted chamber :

Saint Catherine. Statue in stone. Lorraine art, xivth century. From Vaucouleurs. (St. Catherine being one of the two saints whose voices Joan of Arc heard, it may

court at Avignon fell into a condition which Petrarch has described with horror « A sink of all vices and all villainies where the hope of a future life is considered as a vain illusion and Jesus-Christ classed as a childish invention Chastity is esteemed nonsense, and prostitution leads to celebrity. king's daughter (1559). Was quietness to be obtained at last? After the Italian wars, the struggle against Germany and Spain, and after the English had finally been driven out, foreign fighting was over; but civil strife broke out and continued throughout the three successive reigns of Henry II's sons.

At the festivities given in honour of the marriage of his daughter Elizabeth to the king of Spain, Henry II was accidentally killed (1559). Francis II, then six years of age, succeeded him; he married Mary Stuart and died at the end of a year during which the conspiracy of Amboise took place (1560), a severe alarm which foreshadowed the wars of religion. Charles IX's reign saw three of these; then came the massacre of St. Bartholomew (1572) which brought about a fourth war, whereupon a fifth immediately followed. Henry II's reign (1559-1589) opened with the Edict of Beaulieu which granted liberty of worship to the Protestants, together with places of security. But the Catholics became indignant and founded the *Holy League*, which was upheld by Spain and which the astute Henry de Guise relied upon in order to accede to the throne he coveted. Then the fratricide wars were resumed: (sixth, seventh, eighth). Henry III thought he would get rid of difficulties by having Henry de Guise assassinated (1588), but he was murdered in his turn (1589). The Valois dynasty was extinct; that of the Bourbons started with Henry IV, king of Navarre and the head of the Huguenots. The victory at Arques (1589) and that of Ivry (1590) followed by Henry's abjuration (1593) gave him Paris. — « Paris is well worth a mass. » The Edict of Nantes (1598) which finally secured what the Edict of Beaulieu had tried to obtain twelve years earlier, at last brought the long sought-for peace and the Protestants henceforth enjoyed equal rights with the Catholics.

The xvth century was ended, politically, two years before its close. Aesthetically, a decline was already evident; under Henry III purity of taste was spoilt by excessive refinements, and art became effeminate at the same time as manners. Simultaneously, and by way of reaction, calvinistic authority asserted its disdain for form, and the civil wars, whose fury destroyed everything, tended to cause respect for the beautiful to be obliterated.

Indeed, this frenzy was a revealing symptom of the movement then prevalent, but which deviated, for the worship of

plastic beauty gave place to a passion for ideas. Soon the idea was everything. Printing became general, and a literary century succeeded an artistic one. The century which was then ending, doubly characterised as it was by the delicacy of its works and the atrocity of its actions, had won the liberty of thought. Formerly, Francis I, « the father of letters » hanged and burned the emancipators (Etienne Dolet, 1546) ; Rabelais only avoided the pyre because he gave himself a drunkard's airs. For the moment, the mind triumphed through literature, and reform infused itself everywhere. A new world emerged after the throes of this so-called « Renaissance », which in France, was a spiritual birth.

Behind the arcades, on a small column :

Funeral genius, marble statue by Germain Pilon ; carved about 1560. This figure was intended for the tomb of Francis I, but was not used on account of the modifications in the general arrangement of the monument.

XVITH CENTURY

ITALIAN influence invaded France at the beginning of the xvth century, and Spanish influence at its close.

Spain was greatly enriched by the discovery of the Americas and at the same time its political authority was reinforced by the alliance with the Hapsburg family when Charles V was king and emperor. Finally, during the wars of religion, Spain had become the real centre of Roman Catholic resistance against

the ideas of the Reformation. Thus she had the threefold prestige of a financial, military and religious power, and these three elements of her force account for the action which she exercised on European manners in the time of Philippe II. France was greatly affected thereby.

But this influence was not the only one at work in France, for at the same time another showed itself and was no less efficacious. Whilst the Roman Catholic party became imbued with Castilian severity, the Huguenot party adhered to calvinistic austerity, so that these two opposite factors simultaneously worked to bring about a reaction in French tastes, ideas and acts. After the gallant and bloody orgy of the xvth century, the new one wished for earnestness.

Morally, it possessed rare nobility. The excessive stiffness that Spain and Geneva proposed to France as models, were too incompatible with her lively character to allow this double contagion to deform her in a deep or lasting manner; so the French took therefrom just what was necessary to be ennobled without lapsing into rigidity.

To begin with, Henry IV devoted himself to the hard task of restoring his finances and royal authority, which were both much compromised by the last of the Valois. With him commenced an era of centralisation, and henceforward the king with his Parlement was to be everything. Politics and art also, became monarchic, and from Richelieu to Louis XIV our social conception tended towards greatness, and our artistic aspirations were logically imbued with the same spirit. Our aesthetics grew heavy. Being taken up with stateliness rather than gracefulness, anxious above all to remain faultless, and repudiating anything fanciful, art moved towards pompousness and finally wore a wig as the king did. Later on, the period was justly called classic; it was the one which codified vocabulary and orthography, grammar and prose, and founded Academies. Henry IV avoided wars as much as he could; he restrained luxury, reduced his court, revived agriculture, traced out roads and dug canals, the arteries of national life. Sully looked after finance. The peasantry breathed freely, and the middle class grew fat. France worked and sent her sons to colonise Canada, a country which became an American France (1608). But religious malice had not disarmed; by its agency a knife was put into Ravallac's hand, and the beneficent king was murdered in the street (1610).

Immediately intrigues and waste began again. Under the regency of Marie de Medici, the real sovereign was Concini, an Italian adventurer. He was got rid of by assassination (1617). A revival of xvth century manners was threatening and, with them, new wars of Religion. Richelieu saved the French by wielding the power firmly from 1624 to 1642, as well against the rebel Protestants as against the turbulent nobility. He was the inexorable master of all home affairs, and dealt with foreign matters as became a clever politician. Under his efforts, Austria lost her ally, Spain, a country then in decline; the Spaniards were defeated and driven out of Picardy. When Richelieu died, Austria was crushed and France enriched by four provinces: Artois, Roussillon, Lorraine and Alsace. Had he only lived a few years longer, he would have completed the twofold task that Louis XI had dreamed of and undertaken, namely; the unification of the French State and the restitution of its natural frontiers.

But dangerous ferments still existed, and Louis XIII died immediately after his minister (1643). Louis XIV was only five years old, and the new regency brought about a fresh reaction. The Queen Mother, Anne of Austria, appointed as minister, Mazarin, a wily disciple of Richelieu, who obtained the peace of Westphalia (1648), by means of which the Three Bishoprics (Metz, Toul, and Verdun) and Alsace were finally handed over to France. The treaty of the Pyrenees (1659) ratified the annexation of Artois and Roussillon, which had been conquered by Richelieu. A supreme attempt at raising internal rebellions (the Fronde, 1649-1652), was fortunately subdued. In order to enforce peace, the ingenious minister succeeded in bringing about the marriage of the young monarch with the Spanish Infanta Marie-Thérèse. When Mazarin died in 1661, he left royalty powerful enough to enable Louis XIV, then twenty-three years old, to say: « The State? I am the State. »

Louis continued to assert this throughout his reign. He wanted to be the unique master in his own country, and the strongest abroad. This ambition caused unending wars which exhausted the country; he claimed the Netherlands as a dowry for his wife (1667-1668); he attacked Holland, crossed the Rhine (1672), gained possession of Franche-Comté by the peace of Nimègue (1678), and humbled dukes, kings, the Doge and the Pope. When he was at the zenith of his power and

GARGOYLES

It should not be forgotten that, throughout the Middle Ages, art preserved an almost exclusively religious character, being, so to speak, merely a homage to piety. Apart from a few rare objects which were destined to the king's use, works of art only assumed a lay character towards the end of the xivth century, which was accentuated in the xvth. Even at that time, everything connected with public worship obeyed laws which the Church reserved the right to prescribe; not only did the *ymagiers* (image carvers) work to order, but their works were carefully controlled. When we nowadays think that the artists have taken liberties or ventured daring innovations, these are only apparent, and could only find expression because they were duly authorised. The caustic spirit evid-

the ancient Saturnalia, but was also meant to grant free scope for one day to the caustic instincts of the race, and let them run riot.

Against the walls of the hotel :

Principal doorway of Bayeux College, Paris. Beginning of xivth century.

Western door of St. Benoit's church, Paris. First half of xvth century.

Doorway of the monastery of the Benedictines at Argenteuil. Beginning of xiiith century.

THE MONASTIC ORDERS

The first monasteries established in Gaul date from the ivth century and continued the work of christianisation. Later on (about 530) these independent monks grouped themselves under the rule of Saint-Benedict, who prescribed a rotation of intellectual and manual labour, and these Benedictines founded the first schools, which Charlemagne encouraged (800). In the xth century these monks were the only persons who cultivated thought and virtue ; with them merit alone was recognised. They constituted in the country, in opposition to feudalism and the secular clergy, a veritable republic in which positions and honours were obtained by election and not by right of birth. It was a republic on hierarchical lines which knew how to promote its elect, from whatever class they came, to the high rank of an abbot or the absolute power of a pope. These Benedictines immediately grew excessively rich and acquired enormous authority (Abbeys of Cluny, Cîteaux, Clairvaux). The resulting pomp and pride demanded some necessary reaction ; this was undertaken by the idealism of the xiiith century, from its outset. In fact, new orders made their appearance, which remained voluntarily poor : they refused to possess anything whatsoever, and lived on alms, to wit, the *Franciscans*, instituted in 1215 by the Italian saint, Francis of Assisi ; the *Dominicans*, in 1216 by the Spanish saint, Dominic ; the *Carmelites*, and the *Augustinians*. These four orders of mendicant friars worked to reform the world by word of mouth ; later on, the Dominicans started catechizing through fire. In 1229, Innocent III issued a bull founding the Inquisition,

Domestic arts and Manners

IT may be considered that, as a rule, furniture is inspired by monumental art; in every age, the style of the furniture reproduces that of the architecture, on a smaller scale: At no time has this similarity been more apparent than during the Gothic period. A cathedra was a sort of diminutive cathedral; the panels of a side-board recalled the rose-windows of a church and the pointed arches of a doorway, and in the same way, ivory and silver work, enamels, etc, copied types of monumental art and reproduced its style. Consequently, furniture is chronologically of a later date than the monuments; moreover, the designs and *stencilled* drawings which served as models in workshops were handed down from generation to generation and perpetuated antique forms. Therefore it is not at all a rare thing to find, in any one century, figures or pieces of furniture the character of which recalls that of periods already gone by, or still connects the style of the present with that of the past.

who were setting up house and, on that account, acquired an almost symbolical character when they were solemnly carried through the streets to the new abode. A luxurious ornamentation was the outcome of this practice and, from the xivth century this luxury became such that sumptuary laws were often necessary to control their richness. In the xiiiith century iron clasps and hinges were added, in the xivth they were made of carved wood, and in the xvth, their panels were painted in Italy and became veritable works of art; they were also decorated with arabesques in *pâte cuite*. Then the lids became cambered and the chests were called « arks ». They still retained their importance in the xviiith century, until Louis XIV, being of opinion that they were too bulky and ungainly, relegated them out of his sight.

Fireplace from Hugues Lallement's house at Châlons-sur-Marne. On the mantel-piece, a low-relief: Christ and the Samaritan woman. French art, 1562.

FIRE-PLACES

Fire-places were at first circular and situated in the centre of the room; the smoke rose freely up, and escaped through a hole in the middle of the ceiling. This summary installation, a survival of ancient methods a few traces of which may still be found in country-places, was replaced by portable brasers. It was only in the xiiith century that fireplaces were

built into the wall with abutments, mantel-pieces, and basket-funnels ; in the xiiith century they attained enormous proportions, constituting a kind of closet, the side-walls of which were provided with seats, hence the phrase *à la chatte* under the mantel of the fire-place ». From the xivth to the xvth century, they were adorned with carvings which made them magnificent, but they remained uncomfortable on account of the draughts caused by their vast openings ; so that, in order to obtain more warmth, three or four fire-places were built in the same room. During the xviiith century, they became more numerous ; at the same time their dimensions tended to decrease, and from then onwards their ornamentation began to vary, marbles, porcelains, paintings, etc. being added thereto. Louis XIV, who evinced a violent taste for mirrors, had some fixed over his fire-places, and it therefore became necessary once more to reduce the height of chimney-pieces, their proportions being thus restricted to those which obtain at the present time.

In the windows :

Stained glass windows, Swiss, decorated with armorial bearings, figures, etc., xviiith century.

On the upper portions of the windows :

Escutcheons of Jacques of Amboise, abbot of Cluny, who built the Hotel of Cluny (modern reconstitution).

HERALDRY

The first armorial bearings date from the Crusades. They only existed at first in small numbers on the banners of the most important lords, and served as rallying points in that inter-national melody. Soon the principle developed, and those knights who were not permitted to fly banners, adopted colours which helped them to recognize one another at a distance ; these colours proved all the more useful when helmets hid their faces. They were worn on surcoats, shields or escutcheons, hence their name *écusson*. The more numerous they became the more necessary it was to vary their field and charges, and that is why they became more and more complicated from generation to generation.

Those of the xiiith century were exceedingly simple ; the

cross, the badge of the Crusaders, being frequent thereon. Louis VII adopted on an azure field, a golden fleur-de-lys, probably the likeness of a lance-head, which henceforward stood for « France ». In February 1376, Charles V reduced to three the number of the fleurs de lys then found on the royal shield; thus was a remarkable simplification in an age which tended to exaggerate everything and in which fashions and manners soon became foolishly ridiculous. Already coats of arms were overladen, and the maternal branch figured thereon alongside the paternal one; being thus quartered, the escutcheon showed the family alliances, and by the number of its quarters was indicated the number of noble generations. Meanwhile the ingenuity of heraldists was busy inventing countless decorative charges. Again, the outer ornaments increased; after the helmet and the motto, which were placed above the arms, came the device which was put underneath, then the supporters, allegorical figures, were put on each side as supports for the arms; round about were the ensigns of the orders, offices, and dignities. The colours were of two metals, either gold (yellow), or silver (white), and had to alternate with six enamels, gules (red), azure (blue), sinople (green), purpure (violet) carnation (flesh). Two supplementary ones were added, *panes furs*, (*ermine and counter-ermine; vair and counter-vair*). It was only at the end of the xvth century that colours were represented by hachures and guilloches.

Room IV — Lead and Pewter

In front of the windows, south side, in two flat glass-cases :

Lead and pewter articles, religious and secular, xiiith to xvth century, mostly found in Paris, in the Seine, during dredgings carried out from 1848 to 1860 near the Pont St. Michel and the Pont au Change; collected by A. Forgeais.

PEWTER

Pewter is one of the most ancient metals used in Europe; it made its appearance much earlier than iron and silver, and dates back to 2000 or 1500 years before our era. It was then used either pure or alloyed with copper, in the form of bronze.

PEWTER

Pewter is one of the most ancient metals used in Europe; it made its appearance much earlier than iron and silver, and dates back to 2000 or 1500 years before our era. It was then used either pure or alloyed with copper, in the form of bronze.

Discs, small figures and ingots have been found in lake-dwellings, later in the Byzantine tombs of Upper Egypt (iiird cent.), in various shapes, such as jewelry and diverse utensils, likewise in Frankish and Merovingian tombs, in the xiith century chalices were made of pewter (excavations in Troyes cathedral). Until the xiiith century, this metal came from England (Cornwall). When this metal was discovered in Germany, an industry developed in that country which produced not only articles of worship, but also common articles such as dishes, pots, pints bowls, corporation counters and baubles. Pewter was melted down, hammered or engraved. During the Renaissance and especially in the last quarter of the xvth century, pewter-work acquired more importance still through the art of Francis Briot, of Lorraine, and Gaspard Enderlein, of Bâle. Every town had its marks or workshop stamps. Nuremberg, Strasbourg, Bâle, Cologne, Solothurn, Colmar, Liège, etc.

Glass-case on the left :

Pilgrims' signs, from the xiith to xvth century.

PILGRIMAGES

The piety of the Middle Ages presents very particular features. This age believed fervently, it observed all rites very strictly, but really, the morality of the Gospel was very little applied in manners and customs. As for dogma, it remained exclusively in the hands of the theologians; the masses no more asked to be enlightened on the mysteries of religion than the directors of souls sought to explain them.

Moreover, piety was not, strictly speaking addressed to God, for this was too abstract a notion and escaped the majority of minds, which were too insufficiently cultivated. No images of the Creator appeared on the pediment of churches or on the altars, although His blessing hand, or His foot resting on a cloud, were occasionally seen dominating over some particular sacred scene. Even though statues of Christ abound, He himself remains at a distance. Churchmen were practically the only persons who spoke to Christ directly and even then, it was only in Latin (the Council of 1210 declared every clerk to be a heretic who possessed a French translation of the *Pa'ter* or *Credo*). The ordinary person dared

PILGRIMAGES

The piety of the Middle Ages presents very particular features This age believed fervently, it observed all rites very strictly, but really, the morality of the Gospel was very little applied in manners and customs As for dogma it remained exclusively in the hands of the theologians; the masses no more asked to be enlightened on the mysteries of religion than the directors of souls sought to explain them

Moreover, piety was not, strictly speaking addressed to God, for this was too abstract a notion and escaped the majority of minds, which were too insufficiently cultivated No images of the Creator appeared on the pediment of churches or on the altars although His blessing hand, or His foot resting on a cloud, were occasionally seen dominating over some particular sacred scene Even though statues of Christ abound, He himself remains at a distance Churchmen were practically the only persons who spoke to Christ directly and even then, it was only in Latin (the Council of 1210 declared every clerk to be a heretic who possessed a French translation of the *Pa'ter* or *Credo*) The ordinary person dared

not appeal to Christ directly because He was too pure and lofty ; — also because His position as Judge Suprême at the Last Judgment intimidated the sinner. For these reasons the faithful sought the help of mediators whose rôle was to intercede on their behalf ; on earth, these mediators were the priest and the monk ; in heaven, the Virgin and the Saints

Our Lady was the true divinity of the Middle Ages : most of the churches were dedicated to her, the soul of the people was in her care. As she was understood better than her Son, so it seemed likely that she would understand human miseries better than He, since she had suffered more humanly. The people felt her nearer to themselves, she was pitiful, and such piety as was devoted to her had something filial about it. She was both the mother of the Saviour, and that of all Christians ; she was the natural mediator between her own divine Child and her other children ; she it was who recommended them to her own infant Jesus in order that He might not be too severe on them on the Day of Judgment.

The care of our heavenly interest was not the only one committed to her care ; she was implored also in the worse moments of this life, although in the case of terrestrial difficulties a Saint's intercession was more particularly apt, they being classified for that purpose. Each had his own province and bore some insignia, each protected a district, town, parish or convent, or was the patron of a corporation of trades (see notice on *Corporations*) and of all such as were named after him. Each saint was proper to a particular office : our pains, worries, and above all our illnesses, were shared amongst their various spheres of action. More often than not, a detail from the life of a saint or from his martyrdom was chosen to be the foundation of a belief which expected from him one particular benefaction rather than another. Saint Lucy, whose eyes had been gouged out, was invoked against ophthalmia ; Saint Apolline, whose teeth had all been torn out, ought to cure toothache ; Saint Roch displaying bleeding wounds on his leg, would be an aid against leprosy. A play upon words sufficed to give rise to a popular belief : Saint Mame's provided nurses with milk ; Saint Mein de Gaël was supposed to cure rash on the hands (*la gale des mains*) ; he also patronised the beggars, since these stretch out their hands. Besides, he himself was the child of his own name, for originally a stone (*min*) in

the Gaëlic district was the object of a celtic worship and when christianity became implanted in Brittany *Min ar Gaële* was transformed into *Saint Mein de Gaël*. Such types of substitutions are not unfrequent for many saints highly reputed locally and even far afield have never existed and are only a survival of some pagan divinity which was formerly worshipped in that particular locality. Since the new religion was unable to extirpate this inveterate superstition in a radical manner it was obliged to adopt and sanctify it with a Christian name. The great wisdom and indulgent tolerance of Saint Gregory in the vith century recommended this means of evangelisation of which numerous vestiges are found particularly in Brittany. It also happened that a mere copyist's mistake completely created a fictitious person to whom a legend was accordingly fitted. Thus Saint Ursula being martyred in company with her servant Undecimilla the latter by the simple addition of an 'i' was transformed into Eleven thousand virgins (*Undecimilla*).

In this manner there was gradually constituted beneath Christ a kind of polytheism, which was idolatrous and superstitious as well as totally foreign and sometimes even contrary to the spirit of the Gospel. This huge mythology perpetually grew by the addition of new miracles for mediæval mentality being essentially imaginative as becomes extreme youth was characterised by its love of the marvellous. The whole of the Middle Ages is rife with prodigies they were sought for everywhere unceasingly hoped for or dreaded without respite. The Devil was believed in as much as God. The need for magic was so imperative that the intervention of supernatural forces appeared to be the most natural thing of all.

Against the Devil who made himself felt at all moments and to whose vigilant hostility all that was pernicious was attributed only the powers of heaven were capable of successful intervention. But how was their aid to be obtained? Much less by means of moral reasons than by the virtue of material relics. The mortal remains of saints or fragments thereof and even more so all objects belonging to Christ or the Virgin secured to their possessors or to those who beheld them all kinds of advantages. They brought peace to consciences gave absolution of sins cured illnesses averted plagues gave immunity against blows in war prevented defeats and in general procured success in all enterprises whether legitimate

or not. Now it was asserted and acknowledged that these favours were obtained as the outcome of steps or measures taken to this end; it was necessary to approach the sacred object and to invoke it either in its vicinity and at its resting-place, or else it had to be carried to the spot where its influence was to make itself felt.

Hence, for hundreds of years, the extreme importance of the pilgrimages. They were carried out at great cost and even great peril, for highways were far from being safe; some of these pilgrimages required months and even years to fulfil, and since those which were farthest distant needed the greatest effort, logically they were the most meritorious. Jerusalem and Rome, which were so rich in pious relics, stood foremost. The most varied necessities could find efficacious relics without going outside France for them. The churches disputed their possession, each out-bidding the other in gold; every monastery set itself the task of obtaining as many of them as possible in order to add to its own holiness, reputation, and pilgrim connections, hence to increase its prosperity and income. The trade in relics was international and gave rise throughout Europe to constant transactions; hawkers offered their finds to religious houses, parishes, châteaux and passers-by. The most fantastic ones were accepted with enthusiastic candour; whoever hesitated to believe in them, took good care not to express his doubt, for fear of committing a sacrilege for which the saint might avenge himself. The authenticity of a new article only appeared to be questionable to those establishments which were liable to lose their prestige or suffer competition on account of another establishment's acquiring the said article. Violent quarrels arose between monasteries. Relics were stolen by armed force and murders occurred when their possession was coveted. It also happened that they existed in duplicate or triplicate; but the simultaneous presence of several examples of one unique object never shook anyone's confidence.

In order to judge this superstition and its excess at its true value, it is not sufficient to examine the mystic desire for belief which was ever alive in our ancestors. The need they had of help, which was only too real, must also be taken into account. The supernatural was truly their unique refuge and the only valid hope. Against man-born evils and those of nature too, nothing protected the individual, and no secur-

ity of any kind was to be hoped for; hygiene was void, medicine non-existent, epidemics raged almost permanently and famines were perpetually recurrent. The law was uncertain; justice could be bought; property was precarious, since it was continually threatened by war and pillage; brutality reigned everywhere, force overriding right. Life and property were only secure behind the ramparts of castles and towns, the gates of which were closed every night. Again, morals and conscience were on a much lower level than people care to imagine today. No oath was likely to be kept, unless it had been taken on the host, Gospel or shrine, for in that case the perjurer would no longer have to dread the insignificant reprobation of his fellow creature, but the anger of outraged heaven. An honest and pious soul could only find refuge in the cloisters. Yet even amongst the Orders, in the XIIIth century, which was the purest and best, the ecclesiastical and papal censures and the « *sablians* » alike acquaint us with the fact that the clergy was far from setting an example in virtue.

Is it surprising, then, that in a life so bare of help, the people sought for miraculous protections outside the world? They had no others. As soon as the efficacious virtues of a relic were proclaimed, crowds of pilgrims flocked thither. Around some isolated chapel a village sprang up, and several of them quickly became populous centres. The scheme was also planned of installing branches close to large towns, for such as could not undertake long journeys; Boulogne-sur-Seine, an extension of Boulogne-sur-Mer, was founded in this way in 1319.

In order to serve either for himself or for his friends, the pilgrim brought back from these sanctuaries small souvenirs which possessed some of the privileges attached to the pilgrimage. They made up quite a collection of lead and pewter articles of all description, phials (small receptacles containing miraculous soil or water), medals, lockets, various knick-knacks, and above all badges which were worn ostensibly on the hat or clothing and served as amulets. The use of these badges was universal; the superstition attaching to them has lasted for more than eight centuries and has not completely died out in our days; besides, its origin is evidently anterior to christianity, and it should be observed that, if the Church has tolerated and encouraged this custom as being

useful to the propagation and upkeep of the faith, it was never made an article of Faith.

Holy Shifts, from Chartres. Amulets of the xvth and xvith centuries.

THE HOLY SHIFT

It has been observed that the emblems of saints, their relics and the pilgrimages to these relics, as well as the badges, phials and medals brought back from these pilgrimages, constituted the real foundation of medicine in the Middle Ages. Relics of the Virgin were naturally reckoned among the most efficacious. An authentic shift of the Mother of the Saviour was preserved at Chartres. Shirts cut out after this model procured immunity from wounds in war, as well as from conjugal mishaps; therefore they enjoyed an enormous credit. Brantôme, who was not exactly ingenuous, wonders that this « armour » should be allowed to be worn in duels. Failing the shirts themselves, a leaden medal which possessed the same virtues was worn on the chest.

Glass case on the right :

Pilgrimage phials. Trinkets for hats. Badges, civil and political, pass-counters, etc.

Miniatures with inlaid figures, secular and sacred.

Locketts and ex-votos.

On the sides of the windows :

Decorative fragments of pewter, leaden commemorative and funeral tablets.

In front of the windows, north side, glass-case on right :

Parisian toys of lead and pewter, of the Middle Ages and the Renaissance, from dredgings : trinkets, brooches, pins, rings, buttons, hooks, tooth-picks, pencils of lead, whistles and bird-calls, bells, small chains, belts, ferrules, etc.

Glass-case on left :

Corporation counters.

CORPORATIONS

From the moment that the Franks established a military domination and hierarchy in Gaul war became the exclusive affair of the nobles, therefore war alone was noble, the serfs and villains suffered at its hands and worked to finance it yet they never fought themselves. It was for that reason that manual labour was considered a mark of servitude and a sign of dishonour.

But in Rome workmen of the same profession had already joined together, amongst the Germans, *ghildes* had had a similar character. This double origin explains how associations could be formed at so early a date and although some of them were secret (origin of Free-masonry), the aim of the greater part was the defence of common interests and a control over work. Charlemagne at the end of the viiith century, and Philippe-Auguste at the end of the xiith (Synod of 1189) vainly tried to forbid them, Saint Louis regulated them (middle of xiiith century). Each grouped together the production of its own class into a monopoly and in each the *syndics* or *jurés* limited the number of workmen, the hours of work, the length of apprenticeship, they checked and stamped the products, and conferred the mastership, they policed themselves and were responsible for any disorders. Their importance increased notably when Louis XI, rousing the people to stand by him against the nobility, issued regulations concerning the Corporations and bestowed on them, not only badges but also the right to carry a *durk*, which up to then had only belonged to the lords (1467). The modern middle class, or Third Estate, which brought about the French Revolution emerged from these organisations. The number of corporations was considerable, every profession had its own since all workers, such as surgeons, painters, sculptors, no matter what talent or genius they might have, indiscriminately belonged to the working classes (Artistic works were rarely signed by their authors and very often the name inscribed thereon was that of the donor, the word *fecit* meaning therefore *had executed*).

Each of these corporations owned special badges reproduced on leaden counters (*méreaux*) and on their banners. This custom was extremely old, even earlier than the nobility's heraldry, since under the Emperor Tiberius (14-37) the Parisian Watermen or *Nautes* had a boat as their badge, such as " "

carved on the springings in the Salle des Thermes. This hull is the same which the *Marchands de l'eau* (Water sellers) adopted later on and which still figures on the arms of the city of Paris. Nevertheless, corporative heraldry, apart from that of the Nautes, hardly appeared before the xiiith century and only became general in the xvth.

All these corporations were under the patronage of a saint who was chosen sometimes on account of a detail in his life, but often also because of his name, when it lent itself to one of those ambiguities in which the Middle Ages and the Sorbonne delighted. What we nowadays call a pun has been, through all ages, an amusement for the French nation, even in religious matter. Thus it was that St. Barbara became the patron saint of artillery men who generally wore a beard; Saint Sebastian, the patron of tag-makers because tags were used to hold up the hose (*ses bas se tiennent*); St. Laurent, the patron of roast-shop keepers because he died on a grill; St. Crépin and St. Créprien, the patrons of shoemakers because they use *crépine* (fringed lace); St. John, the patron of printers because he was thrown into a vat full of boiling oil, and because printing ink, produced from oil, is prepared in a vat; St. Clair, that of glaziers and lantern makers; St. Blanchard that of washerwomen (*blanchisseuses*); St. Roch (rock) of road-menders; St. Vincent, of wine-growers; the Ascension, of slaters, and the Nativity, of straw-plaiters, (*nattiers*) etc.

Religious counters, trade and other checks, pontifical bulls, etc.

In the middle of the room, in a square case :

Communion-cup, France, xiiith century.

Hexagonal pyx of pewter; on the lid, the Annunciation. French art, middle of the xivth century.

Casket with pewter hinges and ornaments. France, xvth century.

Ewers, ewer-basins, vases, cruets, cups, large and small dishes of pewter. French and German art, from the xivth to xviiith century.

In four flat cases

Tablets and medals, of lead Italian, French and German art, from the x^vth to x^{viii}th century

Heart-shaped casket, of lead, containing the heart of Louis of Luxembourg (died 1573)

Children's toys, of lead and pewter (military, religious, and household toys), France, x^vth to x^{viii}th century

Large and small dishes of pewter Lorraine art (François Briot's) and German art (Nuremberg), middle of x^vth century

Moulds of stone and bronze, for stamping out lead and pewter, or for casting the molten metal (dishes, cups, medals, phials, crucifixes, knick knacks, small figures, buttons, etc.), from the x^vth to x^{viii}th century

Against the walls

Two large Flemish retables, gilt and painted wood Antwerp workshops, about 1500

Triptych, painted and gilt Flemish art, beginning of x^vth century Central portion the Descent from the Cross, carved in full relief, with donor kneeling on the right On the two wings, paintings representing the Nativity, the Adoration of the Magi and the Passion

The Calvary, Gothic panel, painted on wood and varnished French art, x^vth century

Credence tables and dressers France, end of x^vth and beginning of x^{viii}th century (Partly restored)

CREDENCE TABLES

For fear of being poisoned, high personages caused the eatables and beverages which were going to be served them, to be tested in their presence, this testing, which enabled them to have confidence (in latin *credere*) took place on a special piece of furniture, namely, the *credence* table It was primarily, a hollow cut into the wall or even a mere board It was only in the x^vth century that it was detached from the wall and

became a movable piece of furniture. At that time, it was a small round table which was shifted from one place to another and covered with a cloth. Later, a back was added to it and the whole put back against the wall; the lower portion remained open and the upper portion consisted of two wings. Up to the xvth century the credence tables remained plain; in the xvth century they acquired sculptured ornamentation, and afterwards, a canopy. In lordly or rich middle-class dwellings they were utilised, not only to test food but also to display the plate and table services, and thus became an evident sign of wealth. This custom developed through vanity and grew general in the xvth century. At Louis XIV's court, valets served the guests from the credence table, and they each stood behind their respective master; the middle-class copied court etiquette. After the death of the Great King a reaction took place in taste, which became plainer; the valets were dismissed, so as to leave their masters free; high personages preferred to help themselves; for this purpose, a light table called a *servante* was put within reach to replace the servants. Thus in the xviii century the movable table, which had disappeared since the xiii century, came again into favour.

Room V — Bronzes

Before the windows, in two flat glass-cases :

Plaquettes and medals. French, Italian, German and Spanish art, from the xvth to the xviii century.

On the splay :

Commemorative and funeral tablets.

In the middle of the room :

Plaquettes, mirrors, and paxes in bronze and copper, chased, gilt, etc. French and Italian art of the xvth and xviii centuries.

Celestial sphere of engraven and gilt bronze. Italian art. 1502.

Lectern of carved brass, in the shape of an eagle, bearing

the date 1383 and the names of two church-wardens of the church of Saint Nicholas, at Tournai, whence it comes.

DINANDERIES

The « moulders of brass » or copper-smiths of Dinant-sur-Meuse were so reputed from the xiiith century onwards, that their name was given to the numerous utensils which they manufactured from copper, bronze or brass, hammered, moulded or turned. Several Dinantais had settled in France and Germany in the xivth century; when Charles the Bold sacked Dinant in 1470 the moulders of brass who then remained, left the town. However, Dinant which had produced real works of art, did not completely forsake the industry yet; on the other hand, it no longer kept the lead it had enjoyed during the xivth and xvth centuries. From the xvth century, only copper and bronze articles « repoussé » with the hammer were called by the technical name of « dinanderies ». In spite of the huge number which once existed, *dinanderies* are now very rare, for they were systematically destroyed and thrown in the melting-pot along with the « champlévé » enamels, after the invention of artillery (battle of Crécy, 1346).

Against the eastern partition, in a flat glass-case :

Metalwork, knife-knacks, and pieces of harness in bronze and brass, from the xiiith to xviiith century.

On the right and left, in two wall-cases :

Statuettes of bronze, from the xvth to xviiith century.

A flute-player, by Antonio Pollajuolo (died 1498).

Head of a faun or of an antique wrestler in wax, Italian Renaissance, completed later with a bust cast bronze.

Nymph, Bacchant. German art, xviiith century.

Facing the windows, in a wall-case :

Equestrian figure, end of xvth century, in cast and chased bronze, called « Jeanne d'Arc » on account of the

apocryphal inscription engraved on the base « la Pucelle Dorliens ».

Two aquamaniles, (animal-shaped ewers). Flemish art, xvth century.

On the right of the chimney, in a wall-case :

Small pot, ewers, kettle. Dmanderie of the xivth and xvth centuries.

Calvary of repoussé copper. Flemish art, end of xvth century.

On the wall :

The grapes of the Promised Land. Dish in hammered copper. Flemish art, xvth century.

Various dishes ornamented with heraldry, arabesques or plaits, of stamped copper. German art, xvth century.

On the left of the chimney, in a wall-case :

Paxes of chased and gilt bronze, from the xvth to the xvith century.

PAXES

The first Christians, as a token of fraternity, passed on to one another, no matter how they were placed, the « kiss of peace » which the officiating person had given to his nearest neighbour before the communion. This primitive custom, which had been laid down by St. Paul, still existed in the xiiith century and the story is told that Blanche de Castille, the mother of St. Louis, gave the kiss to a courtesan. About that time a modification in the ritual was either introduced or generalised; henceforward, the priest held out to the faithful, a small saintly image, before which they passed and knelt in turn to kiss it. This was the *kiss of peace*, or in short, the *pax*, a piece of metal-work in the form of a tablet which the priest held by means of a handle fixed behind it. Paxes were often made out of precious materials and sometimes constituted veritable works of art.

Furniture ornaments, small bells, mortars, play-things of bronze, etc.

Between these two glass-cases :

Chimney-piece from the house of Hugues Lallement, Châlons-sur-Marne. On the mantel, a low-relief : Actæon changed into a deer. French art, about 1560.

On the opposite side to the fire-place :

The Arithmetic lesson, Brussels tapestry, beginning of xvth century.

Facing the windows :

The Adoration of the Magi. Brussels tapestry, middle of xvth century.

Corridor VI — Mirrors

Mirrors and frames in repoussé copper, or carved and gilt wood. France, Italy, Spain, xvth and xvth century.

Room VII — Audéoud Collection

In a square glass-case in the middle of the room :

The Adoration of the Magi and Shepherds. Small silk clad figures in carved wood, or terra cotta. Neapolitan work, xviiiith century.

In the glass wall-case :

The Massacre of the Innocents. Wood and gummed cloth. Neapolitan work, end of xviiiith century.

In the corner of the room near the window :

The Apparition of the Devil ; a piece of vestry furniture. Jointed figure, rolling its eyes, putting out its tongue, shaking chains and uttering yells. From a church in Milan. Neapolitan work. End of xviiiith century.

apocryphal inscription engraved on the base : « la Pucelle Dorliens ».

Two aquamaniles, (animal-shaped ewers). Flemish art, xvth century.

On the right of the chimney, in a wall-case :

Small pot, ewers, kettle. Dinanderie of the xivth and xvth centuries.

Calvary of repoussé copper. Flemish art, end of xvth century.

On the wall :

The grapes of the Promised Land. Dish in hammered copper. Flemish art, xvth century.

Various dishes ornamented with heraldry, arabesques or plaits, of stamped copper. German art, xvth century.

On the left of the chimney, in a wall-case :

Paxes of chased and gilt bronze, from the xvth to the xvith century.

PAXES

The first Christians, as a token of fraternity, passed on to one another, no matter how they were placed, the « kiss of peace » which the officiating person had given to his nearest neighbour before the communion. This primitive custom, which had been laid down by St. Paul, still existed in the xiiith century and the story is told that Blanche de Castille, the mother of St. Louis, gave the kiss to a courtesan. About that time a modification in the ritual was either introduced or generalised : henceforward, the priest held out to the faithful, a small saintly image, before which they passed and knelt in turn to kiss it. This was the *kiss of peace*, or in short, the *pax*, a piece of work in the form of a tablet which the priest held of a handle fixed behind it. Paxes were often of precious materials and sometimes constituted of art.

Furniture ornaments, small bells, in things of bronze, etc.

PAVING-TILES

It would seem that, about the Carolingian period, square paving-tiles took the place of the tessellated pavements which the Romans had imported into Gaul; the substitution was general, but the process ruder and much less costly. Flat tiles made of terra cotta and previously stamped were placed one against the other in such a manner as to produce a general design. The process had been known amongst the Eastern peoples for many ages past, and the Crusades apparently inspired the French with a taste for it. Already in the xiith century, French floorings presented an artistic character; in the following century they were complicated with variegated incrustations and brightened with a varnish of lead. The shapes varied and became either square, hexagonal or octagonal; the designs and combinations were multiplied. Very fine tilings also existed in the xivth and xvth century, but it is not always possible to fix a precise date to them, for the potters were quite willing to copy their oldest models, and these were preserved up to the xvth century. About the time of the Renaissance, painted tiles definitely supplanted the stamped ones, and the Rouen workshops were then able to achieve, in designs and tones, splendid earthenware tiles (see the French Ceramic section, balcony XIV; Ecouen tiles, etc.).

Wooden staircase with the arms and initials of Henry IV and Marie de' Medici, from the old *Chambre des Comptes*; France, end of xvth century. (The *Chambre des Comptes* or Audit Office was installed in Philippe the Fair's reign, in the Palace, near to the Sainte Chapelle; altered in 1486 by Charles VIII, in 1504 by Louis XII, and later by Henry IV and Louis XIV, it was the scene of historic events. It was burnt down in 1737).

Room IX — Carved wood

In front of the pillars; middle pillar:

Christ on the Cross. Auvergne art, end of xiith century; (the painted cross is modern).

THE DEVIL

The representations of the Devil, which were so varied, but always made in bestial and fantastical forms so as to terrify, were countless in the Romanesque epoch, which was torn between two Hells, that of here-below and that of here-after. These representations were perpetuated throughout the Middle Ages. It is only towards the xvth century that iconography reveals to us a Satan new-formed by the nascent scepticism, this new style of Devil assuming a human face and worldly airs, was the forerunner of the sarcastic Mephistopheles of the xvth century. Sometimes it is permissible to suppose that he is purely and simply a portrait, a caricature of some contemporary personage, for the care of worldly affairs daily occupied a larger place in the anxiety of men's minds. The Demon himself became human, a dealer and a logician; he bargained and signed agreements, buying souls and selling power. Woe betide the enemies of those who had given themselves up to him! (*Sorcery and Satanism*). This state of mind continued up to the end of the xviiith century, bringing with it a great many executions of sorcerers. As for the real Devil of the xth century, he now only frightened people with a vivid imagination, such as those living in the South, Spain and Italy. In those places, mechanical devils still caused the nuns and devout persons to swoon; but soon these terrors of the sacristy or the nunnery became children's playthings and caused laughter when they jumped out of their boxes.

Cordova leathers, cabinets of Hispano-moresque design, xvth century.

The Pleasures of the Country. Flemish tapestry, end of the xvth century.

Table-cloth embroidered with silk, decorated in Eastern style. xvth century.

Corridor VIII — Spanish Retables

Retables, painted and gilt. Spanish art, end of xvth and xvth century.

Square paving-tiles, France, xivth to xvth century.

PAVING-TILES

It would seem that, about the Carolingian period, square paving-tiles took the place of the tessellated pavements which the Romans had imported into Gaul; the substitution was general, but the process ruder and much less costly. Flat tiles made of terra cotta and previously stamped were placed one against the other in such a manner as to produce a general design. The process had been known amongst the Eastern peoples for many ages past, and the Crusades apparently inspired the French with a taste for it. Already in the xiith century, French floorings presented an artistic character; in the following century they were complicated with variegated incrustations and brightened with a varnish of lead. The shapes varied and became either square, hexagonal or octagonal; the designs and combinations were multiplied. Very fine tilings also existed in the xivth and xvth century, but it is not always possible to fix a precise date to them, for the potters were quite willing to copy their oldest models, and these were preserved up to the xvth century. About the time of the Renaissance, painted tiles definitely supplanted the stamped ones, and the Rouen workshops were then able to achieve, in designs and tones, splendid earthenware tiles (see the French Ceramic section, balcony XIV; Ecouen tiles, etc.).

It was burnt down in 1737).

Room IX — Carved wood

In front of the pillars; middle pillar:

Christ on the Cross. Auvergne art, end of xiith century; (the painted cross is modern).

Infant Christ, blessing. French (?) art. Ascribed to François Duquesnoy, known as François Flamand (died 1643).

The Virgin or A Saint. French art, beginning of xivth century. (A piece of work of remarkable beauty, and of a very deep sentiment, but with parts restored, *viz.* the hands, and lower part of the gown).

Opposite middle pillar :

Christ on the Cross Flemish art. xvth century (modern cross).

Ste Geneviève des Ardents. French art, xvth century. From the church of N.-D. at Poissy. A very fine piece and one which for a long while effected miraculous cures under the name of Notre-Dame des Ardents.

Along the wall adjoining the Thermes :

St. George slaying the Dragon. French art. End of xivth century.

The Angel of the Annunciation. Italian art. Pisa school. xivth century.

Stall surmounted with canopy, France, end of xvth century. (Partly restored; the heraldry is questionable).

THRONES (BISHOPS', ETC.) AND ARMCHAIRS

The armchair, which was a state seat, was originally an imitation of the Roman curule chair, in the form of an X with concave lines, made of metal or inlaid wood : the celebrated throne of Dagobert, executed by saint Eloi, provides us with the type. Later on, a back was added; the seat became flat like a bench, and concealed a chest, as did the bench. Then, in the xivth century, the back grew higher, reaching so far as to become a long panel; in the xvth, it was decorated with carvings and often surmounted by a canopy rendered lighter by means of interlaced ogives. But this dais did not last long; by the beginning of the xvth century, the back of the stall was lowered to such an extent that it hardly passed the height of the elbow-rests (Henry II's reign). Soon afterwards it regained statelier proportions (Louis XIII); at the same time

the lines became slenderer. At that time, the movable cushions (*banquiers*) which were formerly tossed about on the chairs, became fixed and were fastened to the wooden frame-work of the furniture; thus bolstered up, the ancient « *fauteuil* » (folding-stool) and the « *chaise* » became the armchair (*fauteuil*); the bench likewise became our modern sofa; chairs gradually took the place of the stools, which formerly existed in large numbers and could be easily moved about, as the familiar, but deferent, custom of squatting down on velvet or embroidered *carreaux* (square cushions), at the feet of the ladies, was dying out.

St. John in the Wilderness. Italian art. Sienna school, xvth century.

The Virgin and Child (with Virgin seated), Auvergne art, xiiith century style executed in the xiiiith century.

Along the wall, on the garden side :

Folding table of painted oak. Germany. Beginning of the xvth century.

TABLES

The Romans used to eat reclining on beds; they introduced this custom into Gaul and it must have died out at the time of the Barbarian invasions. In the Carolingian period, tables of a semi-circular form, resting on trestles, are already to be seen on miniatures. No plates at all; but in the middle of the table, a common dish into which everyone dipped his fingers (see *Forks*). The beverages were not on the table; the serving-men brought them to the guests after the Germanic custom (see *Credence-tables*). The guests were seated on one side only, the other being left free for the service. Since regular table-cloths had not yet made their appearance, a sheet of cloth was placed on the free side, to hide the trestles; it was called the « *tablier* » (apron); the word still remains, but has not retained its original meaning. Table-cloths (*nappes*) only appeared in the xiiith century; by then the table had become rectangular, being generally narrow and long. People still sat on one side only and the service was carried out in the front. When the guests were numerous, several tables were put out in the form of a horse-shoe, whilst in the middle of the room were given those entertainments

dear to the Middle Ages (*entremets*), which took place between the different services of the feast. After the meal the table and trestles were removed. During cold weather the table was laid in front of the fireplace, hence the saying : « Le dos au feu, le ventre à table; (back to the fire, stomach to the table) ». When, finally, the legs were made one with the table, they were plain, solid and generally made of oak. Later on, in the Renaissance, they were carved; Henry II's reign produced tables of walnut-wood, supported by chimeras and griffins.

Enclosure railing from the church at Augerolles (Puy-de-Dôme). French art, beginning of the xvth century.

Mary Magdelena. Flemish art, about 1500.

The Virgin and Child (the Virgin standing). French art, xvth century.

Along the wall, adjoining the chapel :

Chest. French art, xvth century. This famous piece has undergone considerable restoration.

The Virgin and Child (figure cut off at waist). Flemish art, end of xvth century.

Chest (on the front is a scene from a tournament in low-relief). French art, xvth century.

The Virgin and Child (the Virgin seated). Dutch art, region of Maestricht, beginning of xvth century.

Chest (on the front are engraved designs, raised figures on dotted ground : the Fountain of Youth?). Italian art, xvth century.

Virgin (opening). French (?) art; end of xvth century.

On the side of the corridor :

Saint Louis. French art, end of xiiith century. (Partly restored). This statuette, which has been famous for centuries, originally decorated the roof of the « Châsse des Grandes Reliques » (Shrine of the Great Relics) placed behind the altar of the Sainte-Chapelle; the Juvénal des Ursins manuscript shows it standing at that place. After the Revolution, it was found by a collector and the

museum acquired it, in 1851, for the sum of 95 francs.

Supports of a desk and a portion of choir rails from the château of Gaillon, near Louviers. French art, about 1510. See on the second floor, room XXVIII, other fragments of same origin. ~

Above the door :

The Story of the Virgin. Painted panel. English art, xivth century.

On the right and left of the door :

~The Virgin and St. John. Two figures from a calvary. Italian art, XIIIth century.

Engraved boards for the tabular printing of playing-cards, from the xvth to the xviii century.

PLAYING-CARDS AND PRINTING

The invention of printing was the outcome of playing-cards. In 1392, king Charles VI became mad and playing-cards, for which he acquired a liking, were used to amuse him. Immediately, by imitation, public fancy became impassioned for this pastime; but hand-painted cards were very expensive. The idea therefore occurred of engraving pictures on wood, blackening them over with ink and afterwards pressing them on vellum. Thus an invention had been carried out for a witless human being which, unknowingly, was going to propagate thought. (It should be noted, however, that the Chinese had already known of this method of tabular printing for the past 900 years). Some little while later, this process was used to compile the « Bibles of the Poor », collections of saintly pictures, which were less costly than illuminated manuscripts. Gradual progress was made in this art of « mould carving », during the first half of the xvth century, in Germany as well as in France; but the manifold difficulties were only finally overcome by Gutenberg, whose *Psaller*, the first book ever printed by means of movable letters of cast iron, appeared in 1457 at Mayence. Gutenberg's workmen swore never to divulge the secret of his process; however, the Germans sacked Mayence in 1462, the artisans were disbanded,

and a French workman, Nicholas Jenson, who had been sent by Charles VII to Mayence to study Gutenberg's art, established himself in Venice in 1479, because the hostility of the new French King prevented his entry into France. The books which were published in that town are numbered amongst the most admirable. About the same time, several German workmen took refuge in France in the old Sorbonne, under Louis XI's protection. The Parisian citizens welcomed them so cordially that, as a token of their gratitude, they considered it fit to dedicate their first publication to the town which they hailed as the « Ville Lumière » (Town of Light); this name is therefore one of German homage.

The spiritual fermentation which had been apparent for some time past, was prodigiously hastened on by printing. The Reformation broke out. To stem the evil, Francis I, surnamed *Père des lettres* (the Patron of Letters) forbade, under penalty of death, the printing of books of no matter what kind (1535). Almost immediately after (1536), he granted an exceptional privilege to twelve printers, all the others remaining liable to capital punishment. In 1546, Etienne Dolet was hanged and burnt on Place Maubert.

Moulds for pastry, of wood, from the xvth to the xviiith century.

Four mosaics from the Abbey church at St. Denis.
French art, xiith century.

MOSAICS

The Romans had imported mosaic art into Gaul: small cubes of various stones were placed together and cemented, forming together a variegated design to serve as a ground pavement as well as a front covering for the walls. The Byzantines enriched their mosaics with smalt and gold, endowing them with a magnificence whereof Venice and Ravenna still possess examples. Several French churches from the vth to the xiiith century were thus adorned. The bombardment of the cathedral of Rheims has revealed a Carolingian mosaic in the choir.

In so far as wall decorations are concerned, this process, necessitating large flat surfaces, disappeared in the Gothic period, which no longer provided them. For floorings also, this method

was not long in disappearing, owing to the lack of skilled workmen in the art. However, Italy did not completely lose touch with this art, and in the middle of the xvth century, the glass makers of Murano (Venice) brought it back into favour.

But the Italian Renaissance did for mosaic what it was doing for tapestry. Instead of preserving for it the widely decorative character of its compositions, it applied thereto the principles of painting and devoted itself to executing actual pictures. Miniatures were thus achieved, (which antiquity had already attempted before), and jewels and furniture were adorned with mosaics. In the xvth century, Florence manufactured cabinets, mirrors and tables, rendered more decorative with roany-coloured marbles, a *marquetry of marble* rather than regular mosaic. This style, which was very popular in France at the beginning of the xvth century, brought about a revival of mosaic work; Louis XIV gathered Italian workmen together and workshops were founded at the Gobelins. Sumptuous stones, such as agate, jasper, and cornelian, appeared in the decoration of the rooms and furniture which grew resplendent, to suit the taste of the Great King.

The Virgin and Child, worshipped by two angels; a mosaic by David Ghirlandajo. Florentine art, end of xvth century. From the church of Saint Merry, Paris.

In the right-hand part of the room, in two square glass-cases supported by two Renaissance tables (French work, middle of the xvth century): first square case:

Virgin, double-faced. Flemish art, beginning of xvth century.

Joseph of Arimathæa and Nicodemus at the Calvary (?). Figures from a retable. French or Flemish art, beginning of xvth century.

Music-playing Angel, Flemish art, xvth century.

The Virgin at the Calvary, French art, about 1510.

The Impenitent thief. A jointed figure, with springs, putting out its tongue, rolling its eyes, and attachable to the preacher's pulpit. Auvergne art, xvth century.

Caskets of carved wood. French art, xvth and xvith century.

Second square case :

Head of Christ. Southern French art, end of xvth century.

Head of St John on a charger, painted and gilt wood. Southern Germany or Northern Italy, xvth century.

Mask of Christ, apparently from an entombment scene. Southern Germany, beginning of xvth century. (It would appear that this mask was completed with false hair and draperies).

Between the two square cases, in two flat cases :

Figures from altar-screens. French and Flemish art xvth and beginning of xvith century.

Figurines, small diptychs, round lockets and small low-reliefs of carved wood. French, Byzantine, German and Flemish art. A copt comb of the xvth century, French combs of the xvth and xvith centuries.

COMBS

The combs which have been found in the Greco-Roman tombs of Egypt, and dating from the third or fourth century, are no different, either in form or material (mainly ivory or box-wood), from those left to us by the Middle Ages and which we utilise still under the name of small toothed combs.

Up to the xvth century, they were mostly decorated with religious subjects; it was therefore thought that they were *liturgical combs*, i. e., combs used at some religious ceremony in the course of which a clerk combed or pretended to comb an enthroned bishop. But the combs intended for ordinary use might very well have been decorated with religious subjects, these being, for a long time, the only ones employed on furniture or monuments, no matter for what use they were intended. As soon as art commenced to free itself from religion, in the xvth century, the designs on the combs became profane and suggestive. All mediæval combs have two rows of teeth

set more or less close together; the large-tooth comb did not yet exist and its duty was doubtless fulfilled by the *gravouère*, a pointed ivory peg used to disentangle the knots in the hair. The ladies were combed by their chamber-maids. The men, being often at war and wearing helmets, probably took little care of their hair; romances and fabliaux show the knight, on his return from some campaign, seated on a square cushion at the feet of his lady or fiancée, who combs and examines his hair whilst he falls asleep under the touch of her fingers.

Left side of the room, in two square cases;

Strength, by Conrad Meit, of Worms, (about 1530 or 1540).

Adam and Eve, by Francheville. End of xvth century.

Louis XIV slaying Heresy. Statuette symbolising the Revocation of the Edict of Nantes, 1685.

Between the two square cases, in three flat cases:

Two bellows, middle and end of xvth century.

BELLOWS

The hand-bellows which are used nowadays do not appear to be earlier than the xiiith century and they were used but exceptionally. The fire was blown on by means of a metal or wooden tube; in better class houses, special servants were engaged for this tiring duty (*souffleurs*, blowers); for princely rooms, tubes of precious metal were manufactured. (See a specimen of these tubes in the fire-place of this Room).

Backgammon games of the xvth and xvth centuries, French and German.

Pawns by Leonard Daner, of Nuremberg, about 1570.

Small caskets, médaillons, tobacco-graters, nut-crackers of carved wood. French, Flemish and Dutch art. Boxes from the school known as Bagard's (Nancy, xvth and xvth century).

On the walls:

Three tapestries, from the set of the 'History of

David and Bathsheba ». Brussels workshops, about 1520.

The deliverance of St. Peter, tapestry with the arms of William de Hellande, bishop of Beauvais, who gave them to the cathedral of that town. French art, 1460.

Two hangings, embroidered with silk, « History of St. Catherine of Alexandria ». French art, beginning of the xviiith century. From the château of Tarascon.

In the four corners of the room :

Four statues, of stone, representing four apostles, from the Sainte-Chapelle (interior decoration of the upper Chapel). French art, second half of the xiiith century. The twelve statues of the apostles which were against twelve pillars in the chapel had been taken down in 1797. When the restoration of the building took place in 1850, only six could be put back in their place; the other six were assigned to the Museum of Cluny. Four of these had formerly been used in the decoration of a « Chemin de Croix » on the Mont Valérien, where they were mutilated and beheaded during the disorders of 1830.

Near the door opening on to the archway of the chapel :

Sign statuettes. France, xviiith century.

Figure of gilt wood, decorative fragment from the Bucentaur. Venetian art, xviiith century.

THE BUCENTAUR

Venice possessed a sacred galley, the *Bucentaur*, the emblem of its maritime power. This enormous ship, adorned with carvings and entirely gilt, served once a year in the renewal of the celebration of the wedding between the Doge and the Adriatic. On Ascension day, amidst great pomp, it made for the open sea wherein the Doge threw his ring as a sign of marriage, in order to subdue it to his marital authority. This nuptial ring had been given to the Republic in 1172 by the Pope Alexander III as a token of gratitude for the help and hospitality which the Republic had extended to him. Perhaps

the wedding ceremony dates back to that time, but the Venetian maritime pretensions were of earlier date, for they had made themselves felt for two centuries. In 998, Venice had already conquered the empire of the Adriatic, which was later extended to the Mediterranean and jealously held throughout the Middle Ages against all new-comers, Christians or Mohammédans alike. Being unconnected with the surrounding countries, this colony of Asiatics which (maybe before the foundation of Rome) had established itself on the lagunes of Venice, played the rôle of a commercial intermediary between the Eastern and Western worlds. Its trading brought it immense riches and tremendous power, which was pitilessly used for friends or against foes, but ever with savage pride and selfishness. At the beginning of the xviiith century, this republic of merchants, whose prosperity was bound to lead to excessive enjoyment, gave itself up to revels of all kinds; it found its death in a carnival which lasted a century. In 1797, Bonaparte entered the city of the Doges, and the symbolical *Bucentaur* was solemnly burnt down as a sign of the abolition of the Venetian power.

A very few fragments were saved by the patriotic piety of several of the citizens : Count Molino, Governor of the Arsenal, to whom this cruel execution was entrusted, was able to rescue two figures which adorned the stern; his son offered one of these to the library of Venice, and the other to the Museum of Cluny.

Room X — Ironwork

At the entrance of the room :

Railing of wrought iron. French art, xivth century.

Railing, jointed, of wrought iron. Italian art, xvth century. From Verona.

Door knockers of iron and bronze. French, Italian, and German art, from the xvth to xviiith century.

In flat glass-cases, on the right of the entrance ; first case :

Des Mnzis collection of French and German locks, from the xvth to xviiith century.

Door lock with bolts, of wrought iron, with religious

inscriptions : « IHS. Ave Maria gratia plena ». French art, xvth century.

Chest lock, in wrought and chased iron. French art, xvth century.

Keys, French, of iron and steel, chased, engraved and open-worked, xvth and xviii century.

STEEL

Steel is iron combined with a very small portion of carbon (1 or 2 per cent), which renders it non ductile and non-malleable, but hard and fragile. The Crusaders brought back the Damascus steel, which kept its world wide reputation throughout the Middle Ages. During the Renaissance, Germany and northern Italy as well as Hungary, produced remarkable steels; Milanese armours were the most appreciated and their prices rose very high. On the field of battle, the victorious knights did not hesitate to relieve the vanquished ones of their armour, and even made a glory of it. In the xviii century, English and Swedish steels became popular. The first-known mention of French steel only dates back to 1609.

Toothed keys, master-works; same periods.

Second flat case : "

Rustic lock of wood. France, xivth century.

Large chest lock, of wrought iron. Germany, xvth century.

Furniture locks of wrought and chased iron. French and German art, xvth and beginning of xvth century.

Chamberlain's key.

CHAMBERLAINS

Under the Carolingians, as under the early Capetians, the chamberlains (*chamberlans, chambriers*) who, on account of their duties had perpetual access to the king, were naturally entrusted with the care of the royal treasury. They countersigned charters and edicts, kept the accounts, paid the wages, distributed alms, received oaths from the vassals and introduced the ambassadors. In the xivth century, the High Chamber-

lain in the absence of the Queen, was required to sleep « at the foot of the King's bed ». His importance which equalled that of a Chief Minister was envied by the highest lords. Philippe the Fair entrusted this office to a gentleman of low birth named Enguerrand de Marigny, on the death of the king Enguerrand was hanged at Montfaucon so much hatred had his power and devotion aroused against him (1314). He it was who headed the gathering of those middle class men and commoners with whom the kings surrounded themselves later during their struggle against the nobility, and whom the latter nicknamed in derision *Marmousets*. (On the mentality of those times see the notes concerning the xivth and xvth centuries)

Third flat case

Large lock of wrought iron, engraved on the inside with religious and profane subjects. German art, xvth century

Collection of locks of engraved iron, open worked. French art, end of xvth and xviith century

Fourth flat case

Writing-casse casket of iron and silver chased, engraved and gold inlaid. French art, xviith century

Lock front and furniture decoration of chased iron. French art, xviith century

Various objects of chased iron and steel (small comfit boxes, basket hilts, sword hilts, top lockets, purse fastenings, belt hooks etc.) French art, xviith and xviii centuries

Wall case, in north west corner

Lights (candlesticks, lanterns, lamps, tinder-boxes, snuffers, etc.) from the xvth to the xviith century

Chest keys and padlocks, xvth and xviith centuries

In front of the west wall, two flat cases, in the right hand one

Cutlery, from the xvth to the xviith century

1695 by a fastidious nobleman (the Duke of Montausier). The use of plates dates from more or less the same period.

In front of the same wall, between the two cases :

Large chest of wrought iron. France, xivth century.

Seigniorial tiths of bronze. France, xvth century.
From the château of Milly.

The Three Fates. Alabaster group. School of Germain Pilon. French art, second half of xvth century.

Bands of wrought iron. French art, xiiiith and xivth century.

Strong chest of wrought and chased iron : applied decoration of foliage, vases of flowers and animals, in low-relief and the round. French art, time of Louis XIV.

In a wall case, in the south-west corner :

Shield of repoussé and chased iron. Italian art, xvth century.

Hilted swords. Spanish, French, and German art, xvth century.

† Rapiers, xviiiith century.

Standard of silk with the arms of Burgundy ; France, xivth or xvth century. Found in 1860 under a flooring in Notre Dame of Paris, where it had probably been hidden during the civil war between the Armagnacs and the Burgundians.

In front of the wall, on the south side, right and left of the bay :

Gaulish blade, French swords, xth to xivth century.

Broad-bladed sword, xiiiith century. Found in 1861 in the substructure of the Grand Châtelet. The place where this exceptional piece of work was discovered and the castle of champlévé enamel with which the handle is decorated, have led to the belief that it is the sword of an executioner ; such a theory (though not improbable) is not by any means proved.

Two-handed swords. Swiss, German, and French, xvth century.

Trophies of helmets, morions, sallets, breast-plates, shields, etc. xvth century.

Targets of wood, decorated with paintings. Germany, xvth and xvth century.

Tilting lances, xvth century.

Knights' and horses' armours. French, Italian, German, xvth century.

In two wall cases, right and left of the bay :

Edouard de Beaumont's Collection; arms of the xvth and xvth centuries, amongst which may be noted :

Two small Italian swords (tucks), xvth century.

Ornamental sword, by Fideli, Italian art, end of xvth century.

Ornamental sword, Bavarian art, end of xvth century.

Sword with the arms of Milan, xvth century.

Sword of Pescaire, damascened with gold. Italian art, first quarter of xvth century.

Tournament sword of the Emperor Frederick III.

Dirk with discs, Italian art, xvth century.

Venetian dirk, end of xvth century.

Battle-axe and mace, xvth century. Italian art.

Small round shield and duel shields. Italy, xvth century.

Swords, Italian, German, and French; xvth century.

Italian dirks, xvth and xvth centuries.

Sword-belts and carriers, xvth and xvth centuries.

In a wall case, in the south-east corner :

Quarrels and caltrops, xvth and xvth centuries.

Cross-bows with jacks and rollers, xvth century.

Arquebuses and pistols, xvth and xviiith centuries.

Fire-arms, batteries of arquebuses and flint-guns; powder horns, xviiith century.

Revolving gun with eight shots, xviiith century. This weapon of Louis XIII's period already possessed, as is the case with the modern revolver, a cylindrical barrel with eight chambers, revolving on a circular steel axis (dated 1612).

In front of the wall, east side, in a flat glass-case :

Cottenot Collection : Pistols, French, Italian, German, of the xvth and xviiith centuries.

In a wall case :

Saddle axes and battle clubs, France, xvth century.

Rapiers, saddle swords, xvth century.

Swords (left-handed), Spain, xvth century.

Wooden parade buckler, xvth century.

Helmet and sword of the Doge's guard, Venice, xviiith century.

English soldiers' helmets (time of Cromwell), xviiith century.

On right and left :

Swiss armour, xviiith century.

In front of the same wall, in a flat case :

Lock plate, round and flat bolts, with Diane de Poitiers' and Henry II's initials, from the château of Anet. French art, middle of xvth century.

Lock plate of chased iron, dated 1573. French art.

Four square glass-cases; in one of them, towards the south-east corner :

Caskets of iron or set off with iron, xivth to xvth century.

In four arms-racks, round the pillars :

Halberds, from the xvth to the xviiith century. Flat halberd and hunting-poles, France, xvth century. Partisan of engraved iron, decorated with animals and foliage, hunting weapon, Germany, first half of xvth century. Battle-axe called Lucerne axe; xvth. Battle halberd, with contemporary staff, end of xvth. Pike, end of xvth century. Revolutionary pikes, end of xviiith century. Halberds and partisans in open-worked iron, engraved and gilt, French, Swiss, and German, parade arms, xviiith and xviiith centuries.

THE SWISS SOLDIERS

The Swiss cantons hired out to princes entire battalions of mercenaries; Louis XI employed them (1474). After Francis I had defeated the Swiss who were the allies of the Duke Sforza, at the battle of Marignano (1515), he drew an advantageous treaty with them whereby it was agreed that they should furnish a perpetual guard to the French kings. The Swiss remained faithful to their agreement as long as royalty lasted; on the 10th of August 1792, they were massacred at the Tuilleries in the defence of Louis XVIth. In imitation of the kings, private people wanted to have « Swiss » servants, and bedecked lackeys who went by the name of « Suisses » were seen at the gates of private houses and in churches.

« Il m'avait fait venir d'Amiens pour être suisse ».

He made me come from Amiens to be his " Swiss ".

(RACINE, *Les Plaideurs*, A. I, sc. 1)

Around the room :

Three tapestries from the series of the « Story of David and Bathsheba », Brussels workshops, about 1520.

Near the entrance :

Carpet of velvet, embroidered with silk, decorated with flowers and animals. A piece in Oriental style executed at Palermo, xvth century (?). From the treasury of Strasbourg cathedral.

be caught. Italy, xvth century. Extremely rare articles.

Gorgetts and nape-pieces. End of xvth and beginning of xviii century.

Shoulder-piece of repoussé and damascened iron. Italy, xvth century.

Noseband of a horse. Germany, xvth century.

Bust (or corset), and a corset busk. France and Flanders, second half of xvth century.

Girdle, so-called of chastity, of engraved iron, decorated with arabesques. Italian or German art, xviii century (dated 1634).

GIRDLES OF CHASTITY

Public opinion is in the habit of attributing girdles styled « chastity girdles » to the Middle Ages, and to fix their use at the same time as the Crusades. Nothing warrants this assertion : no document indicates either the use or existence of such articles. Boccaccio, in the xivth century, does not even know of them : the oldest one that has yet been mentioned was owned by Francesco Carrara, a tyrant of Padua, who, besides, was sentenced to death by the Senate of Venice on account of his cruelties and crimes, (end of xvth century). Carrara's belt, together with the other instruments of torture which were produced at the trial, are now preserved in the Arsenal Museum at Venice. In France, these belts appear to have been unknown until the Renaissance : Rabelais is the first to speak of them (about 1540) and he ascribes their use to Northern Italy ; a little later, in the reign of Henri II, Brantôme records an attempt to import them, which is unique and may scarcely be called successful. Under Louis XIV, La Fontaine and Madame de Sévigné mention a second appearance of these articles ; they have also been known to figure, in our own time, in several criminal trials ; whatever the period, they were never used but in exceptional cases, and they never entered into ordinary use.

Girdle of chastity of iron and ivory, xviii or xviii century.

Hair-cloths, xviii century.

In four arms-racks, round the pillars :

Halberds, from the xvth to the xviiith century. Flat halberd and hunting-poles, France, xvth century. Partisan of engraved iron, decorated with animals and foliage, hunting weapon, Germany, first half of xvth century. Battle-axe called Lucerne axe; xvth. Battle halberd, with contemporary staff, end of xvth. Pike, end of xvth century. Revolutionary pikes, end of xviiith century. Halberds and partisans in open-worked iron, engraved and gilt, French, Swiss, and German, parade arms, xviiith and xviiith centuries.

(RACINE, *Les Plaideurs*, A. I, sc. 1)

Around the room :

Three tapestries from the series of the « Story of David and Bathsheba », Brussels workshops, about 1520.

Near the entrance :

Carpet of velvet, embroidered with silk, decorated with flowers and animals. A piece in Oriental style executed at Palermo, xvth century (?). From the treasury of Strasbourg cathedral.

Room XI, known as the Holy Spirit Room (Ironwork continued)

Armours, French, German and Italian, xvth century.

All round the room, on the left hand when entering; in a flat case :

Brigandines, doublet with eyelets, xvth century.

THE BRIGANDINE AND BRIGANDS

The brigandine was a leather or cloth doublet covered with metallic plates, which replaced, for pedestrians, the heavier and costlier breastplates. Brigandines were at first used solely by the foot-soldiers of Languedoc, and were named after them (*briga*, armed band, *brigade*, *brigands*). These bands, (whence *bandits*) overran France throughout the Middle Ages and particularly during the Hundred Years' War (xiv-xvth centuries). From the beginning of the vth century, as soon as the Roman authority broke up, and in the great disorder which followed the barbaric invasions, these vagrants began to terrorise the peasants (*manants*) of the flat country; it was then that the strong castles appeared on high ground, wherein the peasants took refuge against the pillagers in case of an alert. The lord protected the villain (*villa*, country-house), and this was the origin of the bond of alliance from which feudalism resulted. Around the *burg*, at its foot and close to its walls, in order to be nearer to the shelter, were gathered together the sedentary trades which formed the *bourg*, the inhabitants of which were the « bourgeois », the « faux-bourgeois » dwelling in the back ground. Thus towns were formed, an agglomeration being needed against the brigands; it was just as much against their surprise attacks as against the foreign enemy that the town was fortified with thick walls. For as soon as a truce interrupted the perpetual wars, the pillagers made it a mockery; once the mercenaries were paid off by the princes who hired them (*solde*, *soldat*, *soudoyer* : to hire, *soudard*), they had to live somehow, so they remained in the country and plundered it. Since they occupied all the roads every band was called a « route », and the brigands, *soutiers*. Merchants were their

daily prey; they laid siege to castles and towns, ransomed kings and popes, and captured Byzance and Greece. The atrocious misery which they brought about everywhere rendered existence impossible. Vainly did Duguesclin, under Charles V, attempt to destroy the *Grandes Compagnies* by taking them with him against Peter the Cruel, to the other side of the Pyrenees; they revived all the same.

The evil only ceased when Charles VII, by means of a *Pragmatic Sanction*, instituted a permanent army (2 November 1439). The people paid them, and the fatherland came into existence; from that time onwards, to the end of the xviiith century, acts of brigandage no longer took place but in exceptional cases, during the crises of the civil wars.

Spurs of the Middle Ages and Renaissance.

Cannons, bombards, culverins, from the xvth to xviiith century.

Cannon-balls of composition, stone and cast-iron; antique and modern; grenades, etc.

Wafer moulds and moulds for consecrated wafers, from the xiiith to xvth century.

Right-hand side, in a flat case :

Door-knockers and handles. France, Germany and Italy. xvth to xviiith century.

Against the west wall :

Professional tools and scientific instruments, from the xvth to xviiith century.

Andirons and fire-dogs, from the xvth to xviiith century.

ANDIRONS OR FIRE-DOGS

The use of andirons, *i. e.* tripods with long stems against which the logs were piled up, very probably dates back to the time when the hearth left the middle of the room to be built against the wall. When this utensil had hooks or gridirons attached to it, on which to hang spits or kettles, it was called a « *hastier* ». They were first made of wrought iron, after-

wards of cast-iron, brass, or bronze; they then gradually lost their slender proportions and were decorated at the base with crouching animals, mainly dogs. The name *chenets* (*fire-dogs*) appeared in the xivth century and became common in the xvth.

At the end of the room :

Household utensils of the xvth to xviiiith century : boiling-pots, a pail, gridirons, pan and firetongs, bellows, smoothing irons, curling-tongs, shovels for chafing-pan, cork-screws, nut-crackers, extinguishers, warming-pans, basins, fountains, etc.).

Collection of French weights and measures, xiiiith to xviiiith century.

In the middle of the room :

Collection of heraldic seals, signets, etc.

Chapel hangings and mantles of the Order of the Holy Spirit, founded by Henry III in 1579.

THE MILITARY ORDERS

In the xiiiith century, a mixture of warlike ardour and pious fervour, the former derived from the feudal spirit and the latter spread by the Church, brought about the first Crusades and also gave rise to the special Orders which embodied the crusading spirit. Being monks and soldiers at the same time, they joined together in defence of the work and conquest of the Crusades in the East; the *Hospitallers* were founded in 1100, the *Templars* in 1119, the *Teutoniques* in 1191. Their power and wealth immediately developed to excessive proportions: in 1314, Philippe the Fair, aided by Pope Clement V, got rid of the order of the *Templars* so as to take possession of their property; a little while later, the *Teutoniques* were likewise crushed.

The *Hospitallers*, who had at first settled at Jerusalem, covered Palestine with French architecture; driven out by the Mussulmans in 1309, they took possession of the isle of Rhodes and established themselves firmly thereon; as *Knights of Rhodes*, they protected the Mediterranean with courage

and vigour. The capture of Constantinople by the Turks (Mahomet II, 1453) rendered their position terribly precarious (1480), but the Christian princes took no interest in them and abandoned them. After a heroic defence, they were once more dispossessed (1523) and under their third name of *Knights of Malta*, they were established on that island by Charles V. The struggle which they were waging against the Infidels was carried on throughout the whole of the xvth century. They still wore a Cross on their garments, the badge of the ancient crusaders, but their task had virtually ended the moment that the Crusades had definitely failed, that is to say from the time when, not only the idea of imposing the Cross on the Mussulman countries of Asia and Africa had to be abandoned, but when, contrariwise, the Crescent was established, over a vast portion of Europe. Henceforth, these Orders, being mere shadows of themselves, only bestowed titles and emblems on their members. Others consequently came into existence, in imitation, but they were all purely honorary; every kingdom possessed one or more of them, and in memory of the ancient mission, their members were called knights, commanders and grand masters; in nearly every case, the cross continued to be the decorative badge.

Exceptionally, several orders adopted a profane badge (*the Garter*, an order founded in 1350 by Edward III; the *Golden Fleece*, by Philippe the Good, in 1429). In order to counter-balance the influence which the Duke of Burgundy obtained from this foundation, Louis XI created the order of *Saint Michael*; but it very soon fell into discredit, on account of the way in which it was lavished. Under the last Valois, it was called « the collar for all beasts ». After the peace of Bergerac, which put an end to the sixth war of religion (1577), Henry III hoped to lessen the prestige of the Guises and gather the Catholic forces around himself alone, by creating a new order which he was to grant to the chiefs of the League. The Order of the *Holy Spirit* was to have one hundred members with the king as Grand Master. This institution did not produce the benefit which was expected of it, and Henry III decided to have Henri de Guise assassinated (Blois, 1588); he himself was afterwards murdered by the avengers of his ambitious cousin (Jacques Clément, 1589). The Order of the Holy Spirit was suppressed by the Constituent Assembly in 1791, and re-established by Louis XVIII in 1816. It finally disappeared in 1830.

Second case, entirely set apart for :

Rouen Ware, from the late xviiith to the late xviiith century.

1st. Rouen decorated with blue scallop, second half of the xviiith and of the xviiith century.

2nd. Rouen polychrome, decorated with quiver and horn designs.

3rd. Rouen blue ground, decorated with polychromatic bunches of flowers (imitation of Nevers design).

4th. Rouen in brown colour (very rare; experiments made during second half of xviiith century). Octagonal bowl with polychromatic decoration on translucent enamel (lead enamel), which allows the natural clay to be seen; the lower portion of the bowl is covered with tin enamel; the subject represented is a hunting scene, after Tempesta.

THE INVENTION OF PLATES

The use of individual plates, like that of forks, is quite recent; the guests helped themselves piece-meal out of one common dish, with three fingers. They tore up their meat with their teeth or knives, utilising in the latter case round slices of bread which were laid on the table and called *francoirs* (trenchers); *porringers* also were used for two persons, whence the phrase « to eat out of the same porringer » (manger à la même écuelle). The habit of using plates only spread in the xviiith century. A historic event determined their popularity: towards the end of the preceding century, Louis XIV, involved in debt by wars and constructions, had sent his gold and silver plate to be turned into coin; the nobility and higher class people followed his example. In order to replace this plate (*plate* meaning silver, whence « plat », which originally indicated, not the flat shape of the dishes but the material from which they were made), it was necessary to manufacture utensils of a less costly nature. Humble crockery could be enhanced by the artistic value of its decoration: the Hispano-Moresque and Italian workshops gave proof of this; no similar art existed hitherto, but it arose on this occasion.

Venus, glazed figure.

Map of France.

In the corner of the room :

Large Rouen dishes decorated with blue scallop.

Close-stool. Rouen, polychromatic decoration.

CLOSE-STOOLS AND HYGIENE

The earliest-mentioned seats of this kind date back to the xivth century; they were made of wood, highly decorated and padded with velvet; their luxury may be accounted for by the wealth of those high personages who alone possessed them at that time. At the same period *chambres basses* (basement chambers) or *chambres courtoises* were to be found in several seigniorial dwellings, as well as huge pits which popular imagination now looks upon as *oubliettes*. Luxury of this kind in building, like luxury in furniture remained very rare until the end of the xvth century. As a rule, even in princely or royal dwellings, the inhabitants threw the filth out of the windows or even emptied it at their door; more often than not, everyone took his precautions before entering his house: several proverbs advise this act of prudence.

Thus the filth made circulation impracticable in the streets, above all in the side streets, lanes and alleys, and round about the churches. To this uncleanness of towns (particularly Paris) the epidemics may be ascribed which decimated the population from the xivth to the xvrth century. The public street decrees issued by Philippe VI and by Jean-le-Bon, in 1348 and 1359 and afterwards renewed by Francis I in 1522, prove the persistence of this evil. The decree of 1522 created a service of rubbish-carts to gather up the filth, and prescribed the installation of a *retreat* in every house. It was hardly observed, even in the king's household. In the galleries of the Louvre (thanks to their rows of statues), in the magnificent staircases (thanks to their landings), and in the bedrooms (thanks to their large fire-places), the lords and ladies of the Renaissance managed to find suitable retreats. Such habits still lasted under Louis XIV at the court of Versailles, and they continued under Louis XV, whose palace was an infection.

They justified the constant use of scent bottles, which are found in such large quantities.

Meanwhile, close-stools had become more widely used; they were not concealed in any way. On the contrary, Henri III would welcome his friends seated on his, and Louis XIV likewise received people of high rank. The privilege of being present at these gatherings was an envied honour with the nobles and ladies of the court. In return, the king would take his meals alone.

East side, a wall-case entirely set apart for :

Nevers Ware (First appearance mentioned in 1608).

Crockery, blue pattern on white ground.

Crockery, white and yellow pattern on blue ground.

Polychromatic design, large ewers, vases, bowls, flower-stands, imitating the Italian ware of Urbino.

On the left and right of this case :

Large pieces of Nevers Ware.

East side, second wall-case :

Delft Ware (First appearance, end of xvth century, enlarged towards 1650).

Delft Ware with blue pattern; Delft with polychromatic design; imitation of China-ware; gilt Delft; black Delft.

At the bottom of the same case :

Hochst Ware (Germany). Polychrome crockery in the form of animals or vegetables.

South side, between the bays, first wall-case :

Foreign wares, xviii and xviii centuries.

Dish from Winthertur (Switzerland); soup-tureen from Anspach (Bavaria); dishes with stars, and flagon from Nuremberg; plates from Marieberg (Sweden); reticulated vase from Münden (Hanover); stove-tiles from Hamburg.

Along the same wall, second wall-case :

French sand-stons ware from the xvith to the xviiiith century ; manufactured at Beauvais, Orléans, Avignon, Thuir (Eastern Pyrenees).

West side, left-hand wall-case :

German and Limburgese sand-stons ware ; xvith and xviiiith centuries ; workshops of Horh and Grenzhausen, Raeren, Sieburg, Creussen, Nuremberg ; beer-pots, jugs, vases, etc.

Bouffloulx (Belgium) sand-stons wars, xviiiith century.

Near by, at the cant in the balcony, (S.-W.), in a high glass case :

Figurines of porcelain, xviiiith century.

German manufactories of Saxony, Hoſchat, Berlin, Frankental.

Viennese manufactory (Austria).

French manufactory : Mennecy, figures of soft paste.

At the cant in the balcony (N.-W.), close to the Lorraine ware, in a tall case :

Figurines of Lorraine ware, Lunéville and Nidsrwiller workshops, groups and personages by Cyflé.

Terra cotta subjects.

Near by, against the railing, north side, in a flat glass case

French porcelains of soft paste, table services. Manufactured at Sévres, Saint-Cloud, Mennecy, and Chantilly.

At the cant in the balcony (N.-E.), near the Rouen ware, in a high glass case :

French Ware of the xviiiith century.

Sinceny (established in 1735) dishes with polychrome design.

Rouen, XVIII century, tobacco graters.

At the cant in the balcony (S.-E.) towards the exit, in a high glass case :

French Ware, second half of XVIII century.

Apsey factory (established in 1750), Lille (1696), Saint-Amand (Nord, 1740), Valenciennes (1735), Sinceny, Bailleul (?).

On the walls :

Polychromatic paving-tiles of glazed sand-stone, from the Brémontier workshops, French art, beginning of the XVth century.

Paving-tiles of polychromatic ware, from the Rouen and Lisieux workshops, XVth and XVIII century. (From the Château of Ecouen, and of la Bâtie).

Through a wide arched bay let into the Roman wall, west side, the Salle des Thermes is discovered.

HOT BATHS

The Romans had imported into Gaul their custom of frequent ablutions, but the barbarian invasions razed to the ground the thermes and villas, and our ancestors ceased bathing for many centuries. The Crusades, which brought the West into contact with the East, introduced tastes for luxury and hygiene which modified manners. It was then that hot baths were established. They were numerous and prosperous in the large towns during the Middle Ages. Men and women bathed naked, but alternately, which did not prevent public morals from suffering thereby, and in the XIII century a decree was issued forbidding the same establishments to be used by both sexes. The prescription was doubtlessly not observed for long, as in the XIVth century the hot-baths were again very ill-famed. In the XVth century, the Church preached against their « lowness, lewdness, and impurity » ; in the XVth, feasts and banquets took place therein ; in the XVIII, « pillar of a hot-bath » was an insult ; by the end of the century, those establishments had fallen into such dis-

repute that honorable people abstained from entering them. Uncleanliness was remarkable during the sumptuous reign of Louis XIV; this lack of care lasted until the influence of English habits induced the French to attend to a few sanitary observances.

In front of the bay looking on to the Salle des Thermes :

Railing of wrought and gilt iron. Italian art, beginning of the XVIIIth century.

Bust of a child, by Pigalle (1714-1785).

Stove lids of Moulins and Paris ware, XVIIIth century.

Returning to corridor XIII, the visitor finds at his right

Balcony XV — Italian Ware

In wall-cases on the right of the entrance :

Faenza ware of the XVth and XVIth centuries; large dishes, small dishes, small pharmacy pots decorated with figures; cups, ewers, godronned porringers, church dishes, crested dishes, loving-cups, paving-tiles.

West side, in two cases, right and left of the steps :

Large and small dishes with blue metallic reflections, Deruta workshops, XVIth century (founded about 1500).

South side case, on right of bay :

Gubbio ware, with red metallic reflections, decorated with figures, portraits and mottos. XVIth century founded about 1500).

Dishes and pharmacy vases, from Castel-Durante, decorated with figures, arabesques, instruments of music, etc., XVIth century (founded at end of XVth century).

South side case, on left of bay :

Large and small dishes from Urbino and Pesaro, decorated with Pompeian designs, figures, mythological and

Old Testament scenes (founded at the end of the xvth century; flourished in the xvth century; artistic decline in the middle of the xvth century).

East side, in two cases :

Dishes, porringers, pots and covers, table utensils and figurines from Urbino and Pesaro, xvth and xvth centuries.

Dishes, cups, and pots from factories which copied the Urbino style (Lyons and Nevers factories, xvth and xvth century).

In the middle of the wall :

The Virgin adoring the Infant Christ. Large low-relief of glazed terra cotta, ascribed to Andrea della Robbia, xvth century.

Pilaster of glazed terra cotta. Della Robbia school.

On the right and left :

Two large low-reliefs of glazed terra cotta : Faith and Temperance, by Luca della Robbia, xvth century.

Saint John as a child. Bust of glazed terra cotta, by Andrea della Robbia, xvth century.

The Martyrdom of saint Catherine. Two low-reliefs from the della Robbia school, xvth century.

From the same school : head of a negress ; an angel as torch-bearer ; a piper ; the Virgin and Child.

Saint Antony the great, a disc of painted earthen-ware.

In a small case :

Terra cotta articles, glazed and not. Italian art, xvth century.

North side, near the entrance, in a wall-case :

Italian ware, from various factories : Venice, Castelli, Naples, xvth and xvth century.

Balcony XVI

Oriental and Hispano-Moresque Ware

On the left of the entrance, in cases against the north partition :

Hispano-moresque Ware of the xivth, xvth and xvith centuries.

Large dishes and ewers, of exceptional value and remarkable beauty, from the Majorca and Valencia factories.

On the right of the entrance :

Dishes, ewers, various utensils, from the workshops of Manisès, Majorca, Malaga; xvth and xvith century.

Azulejos (paving-tiles and facing-tiles). Spanish art, xvth, xvith and xvith century.

In cases against the east and west partitions :

Collection of dishes, plates, cups, vases and ewers, from Rhodes (Lindos workshops); xvth and xvith century. Articles with polychromatic decorations of conventional flowers, animals, boats, and scales; several picked out with gold-leaf; others (very rare, in western case) with personages; one of them, clothed after the Turkish fashion, holds a book showing the lamentations of a prisoner mourning for his liberty.

South side, at the far end, on the left, in a wall case :

Two Syrian vases, xivth century. Exceptionally rare pieces.

Two Syrian vases, xivth century.

Vases and porringers, from Cyprus, xivth and xvth centuries.

Large howl, from Kutaleh, xvth century.

Facing-tiles, Damask and Persian earthenware, xvth and xvith centuries.

South side, right hand case :

Dishes and plates, Rhodes ware (doubtful), xvth and xvth centuries, with bowls, porringers, vases, perfume burners, candlestick feet, etc., of copper engraved, nielloed or damascened with silver, from the workshops of Mosul, Egypt, Venice, etc. ; xivth to xviii century.

Between these two cases :

Stained glass windows and fragments (composite pieces). French art, xvth and xviii century.

Room XVII — Enamels

First high case, towards the southern end of the room :

Champlevé enamels of Limoges, xiiith to xivth centuries.

« CHAMPLEVÉ » ENAMELS

Enamel is a vitrification coloured by means of metallic oxides; opaque or translucent, according to the addition or lack of oxide of tin, it is applied cold to pottery or metals (copper, silver, gold, iron) and is vitrified in furnaces. Its origin is unknown and its use dates far back into antiquity. The Gauls knew of it, perhaps it was revealed to them by the volcanoes of Auvergne, for volcanic stones are often an enamel.

Several kinds of enamels are to be found in gold and silver-works. The *cloisonnés* (partitioned), in which the design is formed of thin strips of metal soldered edgewise to the face of the plate which serves as a base, the enamel paste being laid in the cells thus obtained.

Another kind of enamel, is the *champlevé*, in which the plate itself is hollowed out with an engraver, the sides being left projecting, in such a way that the *champ* (field) is *levé* (raised) or embedded. Again there are the *translucent enamels on sunk relief* in which the metal, mostly precious, cast or incised in low-relief, is enhanced with translucent enamels. Then the *painted enamels* in which the pictorial compositions are executed on the smooth plate. Others that may be mentioned are the

enamels à jour (in openwork) and the enamels in *résille de verre* (glass net) which are exceptional.

Antiquity, Byzance, the East and Far East employed the *cloisonnés*; the *champlevés* were utilised in the Middle Ages particularly from the xiith to the xivth century, at Limoges, on the banks of the Rhine; also in Spain. Painted enamels appeared in the xvth century, in Italy and at Limoges; they flourished during the Renaissance and have continued up to our days.

Enamelled gold and silver work from Limoges, dating from long before the xiith century, enjoyed universal vogue at that period; throughout all Christian countries, articles from the Limoges workshops were sought for by everyone and penetrated even into China.

The technique of this craft present several successive phases. During the first part of the xiith century, enamels were spread on metal, either plain, guilloché, or dotted, with the figures standing out entirely enamelled, enhanced with metallic features, the flesh being rosy-white. When it was later desired to impart more expression to the faces and more variety to the design, the naked portions were reserved and the features engraved thereon (end of xiith century). Soon after, a new process substituted beads in relief for the engraved ones, and those were either cast or carved, and then rivetted to the plate. Finally, entire figures in high-relief, and even in the round were added and fastened after the enamelling.

The colourings likewise varied; to begin with, blue was predominant, above all, lapis-lazuli blue (unlike the Rhenish enamels, which were frequently characterised by their green grounds). In the xivth century, the blue became very bright, and stood out against vivid reds. Perhaps, it is permissible to ascribe this radical transformation of taste to foreign influences. (The Black Prince and the English were reigning at Bordeaux. Spain, on the other hand, was producing enamels of a similar colouring).

About that period, Limoges no longer worked for churches alone, but produced also various ornaments and utensils for the use of private persons. This popularisation of success, completed a decline which had been evident from the beginning of the century. The influence of the princes, the uncles of Charles VI, and a growing taste for luxury, very soon turned public favour towards the *translucent on sunk relief* enamels

which first came to France from Italy. The ancient Limoges glory had broken down, but it rose again almost immediately through its school of painted enamels (See further on, same room)

The Adoration of the Magi; Saint Nicholas speaking to Monseigneur Étienne de Muret. Two plaques of Limoges champlevé enamel, end of xiith century. From the Abbey of Grandmont, near Limoges

Small shrine and fragments of a shrine with a vermiculated ground. Limoges champlevé enamel, end of xiith century.

The Crucifixion. Cambered plaque, champlevé enamel. Rhenish art, xiith century.

Shrine of Thomas-à-Becket. Limoges champlevé enamel, about 1220.

Shrine of Saint-Sebastian. Same origin and period.

Christ triumphant. Book-cover plaque. French art, Limoges, end of the xiith century.

Large shrine (with heads in relief). Limoges champlevé enamel, beginning of the xiiith century.

Two large shrines of Saint Fausta (with figures in relief). Limoges champlevé enamel, xiiith century. From the treasury of Segry.

Two gospel covers (with applied enamelled figures). Limoges champlevé enamel, xiiith century.

Two altar panels. Same style, origin and period.

Processional cross. Limoges champlevé enamel. First half of the xiiith century.

Eucharistic dove. Limoges champlevé enamel, xiiith century.

Small shrine (dark blue, red and green enamels). Limoges or Spain, xivth century.

Processional cross (dark blue, red and pale green enamels). Limoges, xivth century.

In a flat glass case, near by, south side :

Pieces of harness and bridle bits, of enamelled bronze. French or Spanish art, xivth century.

Suspension chain (?) of enamelled bronze. Spanish (?) art, xivth century.

Collection of annulets with swinging centres. France, Spain and Italy, from the xiiith to the xvth century.

Hawk varvels, same periods. These objects are extremely rare. They were affixed to the hawk's foot.

Opposite, in front of the tapestry, stand two flat glass cases, in one :

Inlaid figures of chased and gilt bronze. French art, Limoges, xiiith century.

Two gemellions (washing basins). Limoges champlevé enamel, xiiith century.

Two portable altars. German art, xith and xiiith centuries.

PORTABLE ALTARS

On the one hand, the piety of our ancestors, and on the other the frequency of wars, notably at the time of the Crusades, required the use of portable altars for the armies in the field and their leaders. Just as the fixed altar in churches was erected, whenever possible, over the grave of a saint, so did the portable altar logically consist of a reliquary, to which the consecrated stone was adapted, and the gold or silver mountings were often of very high value.

In the other :

Transformations of the Cross and the Crucifix, from the viith to the xviiith century.

CROSSES AND CRUCIFIXES

The figure of Christ on the Cross has not always occupied a preponderant position in churches and religious ceremonies; the acceptance of this symbol was both very laborious and very slow.

stretching his arms wide open towards the whole of humanity, raised his hands above his head, as if to bless. Since every Jansenist was to have made with his own hands the crucifix before which he prayed, that period has left us a very large number of images very roughly carved with a knife out of ox or sheep bones. Sometimes it also happened that a Jansenist who felt that he did not possess the required artistic talents, simply took a xiith century bronze crucifix or a xvth century dinanderie one, and twisted the arms so as to give them the attitude which his sect had imposed.

From the reign of Louis XIV and during the whole of the xviiith century, the number of crucifixes increased to such an extent that trade was not slow in substituting its own products for works of art and faith.

To sum up : eleven centuries were necessary to bring Europe to admit the idea, at first irreverent, of representing Christ on the Cross. Even then he was required to be shown living, clothed in a royal garment and crowned with gold. Three more centuries were needed after this, in order that christianity should gradually adopt the grief-stricken image of the crucified One, dead, unclothed, and bleeding, crowned with thorns, his loins girdled with a cloth and his feet superposed. The crucifix, such as we see it to-day, thus dates from five hundred years ago.

THE DOUBLE CROSS

The cross with a double cross-piece is a Byzantine invention which remained for a long time peculiar to the Orientals ; its origin is due to a misapprehension, the upper cross-piece being only the inscription-board primarily nailed above Christ, by order of Pontius Pilate. From the xiiith century, this form appeared in France, but only rarely ; it was probably brought back from the Crusades. Besides, in religious or heraldic decorations, the forms of the cross have undergone many modifications, according to the periods and countries (Greek cross, tau-cross, Latin, anchor-shaped, trefoil-shaped, gallows-shaped, haloed, Maltese cross, Saint-Andrew's cross, etc).

The visitor, on facing the large bay-window, will find a series of cases wherein are exhibited the

Painted enamels from Limoges.

PAINTED ENAMELS

The processes of this art equally present several phases : To begin with, a painting in *grisaille*, which was obtained by means of shading enamels was covered over with transparent enamels which gave it various colorations; hatchings, carried out with a brush and shell-gold, enhanced it and recalled the metallic parts of the old *champlevés*. Later, about 1520, the *grisailles* appeared; they were obtained by a first layer of dark enamel, fixed by means of a first firing and on which the design is worked in white (second firing), being finally retouched, reinforced, gilt or otherwise (third firing). Finally, regular pictures were executed, direct on the plaque, with enamel pastes of various colours.

The origin of *painted enamels* is doubtful and several points in the history of this art remain obscure; *Montvaerni*, who was for a long time considered the oldest of the Limousin-artists, never existed. The works which are ascribed to him, only date back to the last quarter of the xvth or even the beginning of the xvth century. Our information is only precise dating from Nardon Pénicaud (1495). From that time it is observed, as in the period of the *champlevés*, that families of artists constituted, from father to son, regular dynasties which went on working for three centuries: the Penicauds, Nouailliers, Courts, Courteys, Limosins, Papes, Laudins, etc. This second Limoges school flourished in the xvth century and produced masterpieces; the Cluny collections enable us to trace their decline, which was already apparent in Louis XIII's time and fully characterised under Louis XIV. What formerly was an art had then become a mere trade. Soon after Limoges only remembered its ancient glory to the extent of making common plates.

In the first flat case :

Pieta. Painted enamel, known as Montvaerni's. French art. Limoges, late xvth century.

The Virgin and Child. Limoges, end of xvth century.

Calvary. Painted enamel, by Nardon Pénicaud. Limoges, 1503. (The only work by this artist that is signed and dated).

Mater dolorosa, ascribed to Jean I Pénicaud. Limoges, early xvth century.

Diptych. Christ and the Virgin, by the same.

Christ bearing the Cross and Calvary, ascribed to Jean I Pénicaud. Early xvth century.

Triptych (Central panel, the Adoration of the Magi; leaves, the Holy Family and the Presentation in the Temple). Workshop of the Pénicauds. (A capital piece from a series characterized by figures with very wide foreheads.)

In the second high case :

Eleven oval medallions; painted enamels representing scenes from the Passion, by Leonard Limosin, about 1550.

Portrait of Queen Eleonor (wife of Francis I, and sister of Charles V) by Leonard Limosin, dated 1536. This piece of work and the two following ones bear witness to the mastership of the illustrious enameller.

Portraits of Claude of Lorraine, duke of Guise, and of Antoinette of Bourbon, his duchess, by Leonard Limosin. From the hospice of Joinville.

Collection of cups, plates, goblets; Limoges, xvth century, workshops of the Reymonds, Pénicauds, Courteys, Mourets, Laudins, etc.

Scenes from the Old and the New Testament. Painted enamels by Couly Noylier, the Reymonds, etc., xvth century.

In a flat glass-case :

Composite triptych showing, in central panel, Catherine de' Medici, a widow, in her oratory; artist unknown; in the leaves, medallions in grisaille by Jean III Pénicaud, polychromatic medallions by Pierre Reymond. xvth century.

Painted enamels in grisaille, Limoges work, xvth century, by Pierre Reymond, Jean III Pénicaud, Pierre Courteys.

THE LADY WITH THE UNICORN.

French tapestry.

Photo Brown

(late 15th century)

TRANSFORMATIONS OF THE CROSS AND CRUCIFIX

A, St Radegund's cross (11th c) — B, A Crusader's cross (11th c) — C, Crucifix, Limoges champlevé enamel (11th c) — D, Crucifix, Limoges champlevé enamel (11th c) — E, Bronze crucifix (11th c)

CROWNS OF VISIGOTH KINGS.

(VIth century)

In the third tall case, against the window :

Translucent enamels, on engraved gold, silver, or copper. Italian art, xvth and xvith century.

Painted Limoges enamels, xvith century, by Couly Noylier, Pierre Reymond, H. Poncet, Martin Didier.

Painted Limoges enamels, end of the xvith and xvith century, by Suzanne de Court, Noel I Laudin, and Jacques II Laudin.

Cups, caskets, salt-cellars; Limoges enamels, xvith century.

Cups, goblets, candlesticks, salt-cellars; Venetian, Russian and English enamels of the xvith and xvith centuries.

In two flat cases, in the north-east corner, near the fire-place :

Plates and medallions, tobacco-graters, purse-plates, etc. Painted enamels of the xvith and xvith centuries, by Noel I, Noel II and Jacques II Laudin, Pierre II, Joseph and Jean Baptiste Nouailher.

Paxes, and decorative fragments. French, Italian and German enamels, of the xvith and xvith centuries.

Turning his back on the fire-place and going down the room again, the visitor reaches, in front of the tapestry and at the bottom of the room, five square cases :

Devotional gold and silver-work from the xith to the xvith century.

First square case, on the right of the entrance :

Two crosses of chased and gilt bronze, German art, one of the end of the xith century, the other of the end of the xith.

The four rivers of Paradise, a bible-cover in open-work copper, chased and gilt. French art, xith century.

Inlaid figures, the Last Supper, the Flagellation, the Virgin, a Deacon, etc., Limoges work, xith century.

THE LAST SUPPER

During the course of the last meal which he took with his twelve disciples before going to be sentenced, Christ announced his coming death. The popular belief according to which one of the guests, when there are thirteen at table, will die during the year, is certainly a reminiscence of this meal and prophecy.

Abbatial and episcopal Croziers of the XIIIth and the XIVth centuries

Christ (beardless) blessing. Limoges, XIIIth century.

Small reliquary in the shape of a chapel. French art, XIIIth century.

Second square case, on the left of the entrance :

The Virgin and Child, a chased and gilt bronze group. French art, beginning of the XVth century. A reliquary was later on added, on the Child's stomach, with the inscription : « De umbilico domini Jesu Christi ».

Shrine of St. Anne, by Hans Greiff, of Nuremberg, 1472. On a canopied cathedra, made of chased silver, are three figures in repoussé, gilt and painted silver : Saint Anne, seated, holds on her knees the Virgin and the Infant Christ who presents the reliquary.

Foot-shaped reliquary of Saint Alard ; gilt bronze, Italian art, 1331.

Reliquary borne by two angels. French art, XVth century (Partly restored).

Third square case near the exit :

The Virgin of Moussac. Limoges champlevé enamel, beginning of the XIIIth century.

A saint seated. Large inlaid figure. Limoges work, XIIIth century.

Saint Stephan. Statuette of gilt bronze. French art, XVth century.

The Virgin and Child. Gilt bronze. French art, xivth century.

Episcopal croziers. Limoges champlevé enamel, xiiith century.

Ciboria and pyxes of Limoges and Spanish champlevé enamel, xiiith and xivth century.

Fourth square case, at the bottom of the room, on the left :

Crozier from the Abbey of Bernay. French art, xivth century.

Ciborium of gilt bronze. French art, xivth century.

Two shrines of chased, open-worked, and gilt silver. Silver-work from Bale, about 1500.

Monstrances, chalices, ciboria, etc., from the xiiith to the xviiith century.

Fifth case, at the bottom of the room, on the right :

Shrines, ciboria, monstrances, paxes, thuribles, hand-warmers, etc., from the xiiith to the xviiith century.

HAND-WARMERS

The hand-warmer, or « chauffette », was a hollow ball of copper or silver, provided with small chains, which rendered it more easily transportable. Inside it, an arrangement of concentric circles with counteracting pivots constituted a regular jointed suspension, which was intended to prevent the upsetting of the burning charcoals or red-hot iron pellets which provided the heat. When the use of earthenware spread, another kind of hand-warmers made its appearance, and those were more convenient and less costly. They were mere earthen vessels, filled with hot water and generally in the shape of a book. Those hand-warmers were mainly used by church people during the long winter services. In this particularity may be found the etymology of the name *moine*, which the French bed-warmers go by to-day.

Against the wall, at the bottom of the room, in front of the fire-place :

Large retable of repoussé and gilt copper, enhanced

with enamels, representing Pentecost. Rhenish (?) art, late XIIIth century. From Coblenz.

Funeral plate of engraved and enamelled copper. Flemish art, 1535.

Nine large plates (pagan divinities and allegorical figures). Painted enamel by Pierre Courteys, 1559. Supposed to come from the château of Madrid (Bois de Boulogne).

Processional cross of the great Carmelites of Paris. French art, XVth century.

PROCESSIONAL CROSSES

In the Middle Ages, the crucifix did not remain permanently exhibited on the altar; the officiating priest put it there himself, to celebrate Mass; during certain ceremonies it was carried round the church or outside.

In four glass wall cases standing underneath :

Goldwork and jewelry. German art, XVth and XVIIIth centuries.

Against the wall, opposite the windows :

Six tapestries, known as the **Lady with the Unicorn**, French art, end of the XVth century. These hangings, which bear the coat of arms of the Le Viste family, come from the chateau of Boussac. Many fanciful legends have been inspired by these celebrated tapestries. The crescents which appear in the crest once fostered the belief that they were a souvenir of Zim-Zizimi, who was the guest of Pierre d'Aubusson, lord of the Manor of Boussac, in 1482. The shield is now identified : the simultaneous presence of two heraldic animals (the lion, symbol of force, for the nobility of the sword, and the unicorn, symbol of incorruptibility, for the nobility of the robe) merely stands for the alliance of two families, one of which belongs to the sword, and the other to the robe. Taken as a whole, this work was probably designed for a demoiselle Le Viste on the occasion of her marriage, and seems to illustrate an allegory of the five senses, conforming in a great degree to the spirit of the period : Sight (the lady is presenting

a mirror to the unicorn), Hearing (the lady is playing an organ), Taste (the lady is offering nuts to the parrot and the monkey is eating a cherry), Smelling (the lady is plaiting garlands of flowers, and the monkey is plucking a rose to pieces), Feeling (the lady is touching the unicorn and the staff). The sixth tapestry, of more considerable dimensions, would appear to represent, if not a sixth sense, at least the homage to her who charms all the senses together : « My only desire ». — This set of tapestries was purchased by the Museum in 1882.

TAPESTRY

Tapestry is a work in which coloured threads (generally of wool or silk) constituting the web, are woven across other threads (generally flax) which constitute the warp; the combination of lines and colours thus produces pictures which make up the texture itself; therein tapestries differ from embroideries, where the decoration is added to some material already existing.

In tapestries called *haute lisse* (high warp), the warp is vertical and the web horizontal; the worker, placing himself between his work and his model or *cartoon*, reproduces the latter by means of measurements which he marks on the warp. On the contrary, in *basse lisse* (low warp), the warp is horizontal and the web vertical and the worker, placing his task between himself and his model, only examines the latter through the warp, following it mechanically, as if he were tracing it. The *haute lisse* thus gives a direct reproduction of the original picture, and the *basse lisse* an inverted reproduction. The second method is much more rapid and less costly than the other and produces works of art which are less perfect, but technically it is almost impossible to distinguish the first from the second. The weaving is begun at the base. In the Gobelins workshops (Paris), the daily work of one man barely produces more than one square metre per year. Tapestries, which were one of the luxuries of the Middle Ages, thus represented a considerable expense.

The *haute lisse* was known to antiquity; Egyptian paintings dating from three thousand years before our era stand as proof thereof, as well as the decorations on Greek vases. Coptic tapestries of the 11th and 14th centuries are numerous. In the 15th century, the « *haute lisse* » processes tended to spread

throughout the West, but the revival of this art only manifested itself, really, in the xiiith century. Paris then became the centre of a production which, in the xivth century, rivalled that of Flanders; Charles V and his brothers, the three terrible and magnificent dukes, gave to this art, as well as to all arts of luxury, an impetus which was kept up by Charles VI, the mad king. During that reign, Nicolas Bataille of Paris, began the admirable *Apocalypse* of Angers, which was only completed at the end of one hundred and fourteen years, under Charles VIII. The Arras tapestries were the most famous, so much so that their name became a generic term and served to describe all works of « haute lisse » origin, no matter from what country they came. In 1386, Jean sans Peur, who had been taken prisoner by Bajazet at Nicopolis, redeemed himself by means of a ransom of *Arrazzi*. Up to the xvth century the tapestry designs were inspired solely by religious subjects, but the xvth century added secular ones, and landscapes appeared at the same time. The tapestries gained in ingenuity but lost in grand simplicity; gold and silver threads were introduced into the web. Meanwhile, Germany and the south of France established famous workshops, and Brussels produced masterpieces. Italy, having sent for Flemish workmen, began to learn the art and set itself to reproduce the works of its own painters, Raphael himself designed « cartoons ». Under this influence, tapestries became true pictorial compositions, and henceforth this character went on increasing. Towards 1535, Francis I established the first royal manufactory at Fontainebleau, under the direction of Babou de la Bourdaisière; in 1597, Henry IV set up looms in rue Saint-Antoine and soon after in the Louvre itself; in 1662, Louis XIV founded the Gobelins and, almost immediately after, the Savonnerie; two years later, Beauvais. Nowadays, the French « basse lisse » looms, are a speciality of Beauvais and Aubusson, just as those of « haute lisse » are peculiar to the Gobelins.

Our ancient tapestry weavers, particularly those of the xiiith century, barely employed twenty tones; now, the chromatic scheme comprises 14,400 shades, and produces less pleasing results.

Underneath the tapestries, at the level of seats :

Misericords of pews, from a Picardy church. French art, about 1500.

At the bottom of the room :

Monumental fire-place, of carved and painted stone, decorated with grotesque figures and bas-reliefs representing the legend of the Santa Casa. On the two front panels are the two principal scenes; on the left, the first episode; the house in which the Virgin was born is carried off by angels who take it to Italy, crossing above the sea; on the right, the fourth and last episode: the house is finally erected near Loretto, where pilgrims come to visit it. On the side-panels are two intermediary scenes. Right side, second episode: the Santa Casa is in the mountain haunted by brigands, two robbers are attacking a pedestrian and have thrown him to the ground, another is stopping a horseman. Left side, third episode: the Santa Casa is on a field belonging to the two brothers, who with the aid of armed escorts, are disputing the ground, whilst in the foreground of the same scene they are lying wounded and dying.

This fire-place is from rue Croix-de-Fer, Rouen. Franco-Italian art, first quarter of the xvth century.

A ceiling and two doors, same period and origin.

Decorating the window, from left to right :

Stained window-piece of Saint Timothy, Rhenish art, xiiith century. From Reutviller (Alsace).

STAINED GLASS WINDOWS

Glass was for a long time too precious and too rare a material for any one to think of using it in window apertures. The Ancients used strips of mica called *specular stones*. When sheets of glass were first substituted for these, the luxury was exceptional; portions of stained glass were evidently used long before entire window-panes. Indeed, the « gouttes » (patches) or plaques of glass were of limited dimensions; therefore it was necessary to piece together collections of small bits, when it was desired to cover a comparatively important surface, and thus the idea occurred of putting these patch-pieces together in such a way that the whole

should constitute a design; moreover, they were often tinted to imitate the gems which they replaced in jewelry, and quite naturally, the colours were combined so as to obtain a polychromatic decoration. Floral designs and religious symbols very probably furnished the first models. The appearance of these transparent mosaics was hailed as a marvel. In the middle of the vith century, a poet sang the splendour and joy poured by the glass-windows of Saint-Sophia into the Byzantine basilica. A little later on, several churches at Rome also possessed stained glass-windows. Then, in the viith century, Bishop Gregory decorated Saint Martin's at Tours, with them; in the viiith, they appeared in the cloister of Jumièges Abbey; in the viiith, they were to be found in England; in the ixth, Hincmar, Bishop of Reims, gave some to his newly built cathedral.

Dating from this period, an art had been created; experts wrote treatises; artists acquired renown; decorative compositions increased. At the end of the xth century, it was said that at Saint-Hubert, in the Ardennes, there were stained glass-windows whereon griffins could be seen amongst entwinings; in the xith century, the church of Saint Remi, at Reims, showed historical scenes. In 1134, abbot saint Bernard, an enemy of pomp, decided that the monks of Cluny should only have in their monastery windows that were « white, and without any cross, or colour ». Which indicates that the use of multicoloured window-panes, sumptuous though it was, tended to become general. Towards the same period, a school was established on the banks of the Rhine.

••The art of painting on glass had likewise been created; it should not be confused with that of combining in juxtaposition pieces of glass that have already been tinted.

As a matter of fact, the development of the stained glass window was christian work; dates prove it, and logic corroborates the fact: this innovation and its progress answered a spiritual need. The mysticism of the Middle Ages was bound fervently to cultivate an art which helped it to expand. Into these radiant doorways which were pierced in the stone between the heaven of the blest and the earth of the wretched, this art introduced all its dreams and faith, its legends, and a moral beauty expressed by real splendour. A miracle and an enchantment, a joy to the eye and the soul, a flower of light blossoming forth amidst the shady

gardens of the cathedrals, amongst the trunks of leafy pillars, a rainbow-coloured opening through which human distress breathed prayer, an outlet of light through which faith rushed forth towards the invisible, and perhaps inaccessible heaven! The stained glass window is an enormous flower the calyx of which blooms forth above men's bowed heads, and which the eyes of the faithful, when raised towards God, meet like a promise of the dazzling splendour of Paradise; from its petals hope falls in rays; they shower a rain of aspirations on the people. The stained glass-window of the Christians is symbolical in a twofold way; it is the path along which God sends to them some of Heaven's magnificence, and the highway along which their vows wend their way towards the infinite. Heaven knows whether the Middle Ages, in their unending distress, were in need of hope; the song of the stained glass-window was their song of hope.

Eighteen stained glass-windows from the Sainte Chapelle of the Palace of Justice, Paris. French art, middle of the XIIIth century.

A secular stained glass-window, French art, XIVth century.

Sundry stained glass-windows, French and German art, XVth and XVIth century.

Crossing the balcony where the Hispano-Moresque ware is exhibited, the visitor finds, in the S.-E. corner, a door through which he gains access to

Room XVIII — Jewish Collection

In the middle of the room, in a flat glass-case :

Nearly all the objects exhibited in this and the other cases refer to the Jewish religion.

THE CONDITION OF THE JEWS

Already in the time of the Cæsars and in Rome itself, where they were numerous, the Jews lived in isolation; everywhere they spontaneously constituted small colonies,

were drained; laws of expulsion were decreed, withheld, then enforced again, and thus added to the monetary fluctuations in order to procure for the king the resources which the regular taxes were unable to furnish him.

The frequent spoliation of the Jews during the Middle Ages account for the extreme rarity of Jewish gold and silver-work, previous to the xviiith century. Besides, their art does not show any ethnic character; it never was but a work of assimilation, a product of local art adapted to the needs of the Jewish religion.

Hanouklah (Wall-lamp with nine burners for the feast of the Maccabees). A piece of open-worked bronze, reproducing the triangular gable-end of a church (St-Martin-des-Champs?). French art, xivth century.

Tass (decorative plates for the scrolls of the Law), of repoussé and chased silver, gilt, filigraed bronze, etc. Dutch and German art, xviiith and xixth century.

Perfume boxes for Sabbatical ceremonies. Silver-work, xviiith and xixth century.

Engagement rings, from the xvth to the xixth century.

Indicating hands, for use when reading the Law, from the xviiith to the xixth century.

Cups and knives for circumcisions, xviiith and xixth century.

In front of the windows, in a flat glass-case :

Perfume boxes. Dutch and German art, xviiith century.

Mesusah (a house-protector).

Moghilah (the story of Esther). This biblical text, rolled up in a cylinder of wood or precious metal, was found in most Jewish families, in order to remind them that God will protect his chosen people against their persecutors.

Hebrew alphabet, a stone engraved in relief.

Prayer-books, xviiith and xixth century.

and everywhere the hostility of the people banished them still further. This situation, which was already theirs amongst the pagan world, became still more pronounced in the Christian world, which considered them as hereditarily responsible for the death of the Saviour.

After the year One Thousand, when satanic terrors haunted men's minds, it was generally admitted that the Infidels, either Saracens or Jews, were incarnations of the Devil, to avenge God. Crusaders set forth against the former, but beforehand, and on the spot, the latter were exterminated. These massacres formed an intermittent custom in the Middle Ages, when the population was stricken with a scourge, they accused the Jews of being the effective or at least the moral cause of it, they were suspected in turns of attracting divine anger, spreading plague and leprosy, bewitching folks or beasts, poisoning fountains, carrying off and eating up children, or again of conspiring with the Saracens and lepers to destroy the Christians. Cruelties took place in periodical outbursts, but petty persecutions remained constant: since yellow was the colour of traitors, the Jews were obliged to wear, as a reminder of the betrayal of Christ by Judas, two round yellow patches like large cockades, which were sewn on the front and rear of their clothing; various social exclusions which were imposed upon prostitutes were applied to them in certain provinces; at Le Puy, law-suits between Jews were judged by choir-boys: at Toulouse, a Jew was buffeted on Passion Day. (Even nowadays, on Good Friday, in Catalonia, the children conduct a symbolical massacre of the Jews which consists in striking blows with a wooden mallet on the porch of the church). This state of social misery did not prevent the Jews from prospering; the importance of some of them was great, even in the thirteenth century; their commercial talents made them wealthy and they became the people's bankers, sometimes the sovereign's also. They seem to have, not invented, but introduced the bill of exchange, which probably was a means of personal defence amongst co-religionists against the fiscal persecutions and the expulsions that were regularly pronounced on them from the end of the thirteenth century onwards. Indeed, whilst royalty was occupied in its time-honoured struggle against feudalism (XIIIth-XVth century), and in proportion as power was being centralised and force amplified, kings needed and lacked money more and more; the coffers of the Jews and Lombards

were drained ; laws of expulsion were decreed, withheld, then enforced again, and thus added to the monetary fluctuations in order to procure for the king the resources which the regular taxes were unable to furnish him.

The frequent spoliations of the Jews during the Middle Ages account for the extreme rarity of Jewish gold and silver-work, previous to the xviiith century. Besides, their art does not show any ethnic character ; it never was but a work of assimilation, a product of local art adapted to the needs of the Jewish religion.

Hanoukiah (Wall-lamp with nine burners for the feast of the Maccabees). A piece of open-worked bronze, reproducing the triangular gable-end of a church (St-Martin-des-Champs ?). French art, xivth century.

Hebrew alphabet, a stone engraved in relief.

Prayer-books, xviiith and xixth century.

Here and there were stools and carpet-squares, humbler people often sat on the bare ground. All business was discussed in the Chamber of the lord or king, so much so that the name is still in use to day to indicate the various places in which State or other questions are discussed : Council Chamber, the Chambers (Parliament), Criminal Chamber (Court).

Originally, the sovereign would preside there, sitting on his bed (hence the phrase « *Lit de justice* » - Bed of justice). Dating from the xivth century, the invasion of the chamber was such that an adjoining room was needed, a kind of alcove wherein one could « lie » at rest, and this was called the « retreat »; then the official Chamber in which was the bed, was called the « *Chambre de parement* » (State room). Those about to die laid themselves down there, visitors were received there, for the royal custom had spread, not only to the gentry, but to the middle class (see the article on the BED). It should be noted, however, that in most French houses, the kitchen, adorned with dinanderies that made it bright and gay, remained for a long while the room in which the guests gathered together with greatest willingness; it retained this privilege from the xivth to the xvth century, and was hardly forsaken until after the reign of Henry IV. The kings and lords were in the habit of « *faire marcher les chambres* », that is to say of taking on their travels, in enormous chests, not only their bed, but the other pieces of their personal furniture, including the draperies and silver-work, etc; this was a costly fashion, above all in the xvth century when the princes' luxury was great; it was a dangerous practice in time of war, when the pillaging of camps procured sumptuous booty for the victor; after the battle of Granson (1476), the Swiss grew rich with the spoil taken from Charles the Bold. The fashion of always travelling with one's bed was moreover rendered necessary by the frequent uncleanness of lodging places, and it lasted into the xviiith century.

xvith century furniture :

Tables and seats of carved wood, chests, double-bodied pieces of furniture; periods of Henry II, Charles IX, Henry III. The bed, which is wrongly said to have belonged to Francis I, is only a decorative  made up of various elements.

On the right of the fire-place :

Double-bodied piece of furniture from the abbey of Clairvaux. A remarkable piece of work of the last quarter of the xvth century.

On a table :

The Presentation at the Temple. A marble group from the André Beauneveu school. French art, end of xivth century.

On the walls :

Cordova leathers, of the xvth century.

Hanging embroidered with wools and silks. French art, about 1600. This set of hangings consists of four pieces and adorned Sully's apartments, at the Arsenal, when he was a minister of Henry IV; on each one is designed a mythological figure: Apollo, with Henry's features; Saturn, is Antoine of Bourbon, the king's father; Venus, Jeanne d'Albret, the king's mother; Juno, queen Marie de' Medici (Two of these hangings are exhibited in Room XXII; the fourth, in the case of the Holy Spirit).

Fire-place from a house at Le Mans (known as « de la Cour Poté »). French art, early xvth century.

Stained glass-windows from the church of Betton (Brittany). French art, early xvth century.

Room XXII, called the White Queen's Chamber

WHITE QUEENS

For fear of successional rivalries, and for other reasons too, the Council of Saragossa had decided, in 691, that the widows of kings should end their days in a cloister. Later on, this severe rule was extenuated and the queens were only required to submit to a seclusion of several months after the death of their husbands.

When Louis XII died, his widow was installed in the hôtel,

of Cluny, and, since widowed queens wore white mourning, the « white queen » gave her name to the chamber which she is believed to have occupied at that time. Tradition relates an amorous adventure on her account, in which the chroniclers found some entertainment. When Anne of Brittany, second wife of Louis XII, died in 1514, the king, although he had evinced a violent grief, re-married almost immediately, taking as wife an English princess, Mary, sister of Henry VIII, who was then sixteen years old. Brantôme relates how the king then fifty-two years of age and ill, tried « to make himself a pleasing companion for his young wife ». He died therefrom in the third month, without leaving any issue. The branch of the Valois of Angoulême was thus called to the throne in the person of Francis I. It is conceivable that the queen regretted her down-fallen majesty; a son and heir by the deceased king would have brought her back to the throne, so she pretended to be with child, bolstering up her dress « with linen cloths and rags ». In addition, her intimacy with an English gentleman, the Earl of Suffolk, ran the risk of transforming the fraud into more dangerous realities; Francis I, warned of the peril by his mother Louise de Savoie, posted spies and had the hotel watched. The chronicle of scandal reports that one night, having been warned of the presence of the count in the widow's chamber, the king came in person to surprise them, and had them married on the spot, in the chapel of the abbots of Cluny. Whether this tale be authentic or fictitious, the fact is certain that the Queen of France became Countess of Suffolk and returned to England. It was the same Earl of Suffolk who later accompanied Henry VIII to the meeting in the Field of the Cloth of Gold (between Guines and Ardres, in Flanders, June 1520).

Furniture of the XVIIIth century :

Bed and armchairs of the Marshal of Effiat (died 1632).

BEDS

The most various materials were utilised for the making of beds : stone, bronze, iron, and wood; sometimes they were decorated with gold, or silver, or ivory, etc. This luxury was especially noticeable in the XIIIth century. In the XIVth, beds became more roomy and grew still larger, reaching to over

four yards in width. Their frame was equally very high; they were reached by means of a chest which was used as a footstep. It does not appear as though pillared beds came into use before the end of the xvth century; up to then, plain curtains protected them from draughts. Nearly always a swinging night-light would burn at night, not so much to provide a convenient light as to scare away the apparitions of the Devil and ghosts which were so frequent in the xith century and still persisted after the Renaissance. Very often artists painted high officials lying on their bed and wearing their insignia, but this was purely symbolic, for everyone went to bed naked. This custom, which already existed in the time of Charlemagne, still continued in the xvth century and even into the xvith. The body was simply draped in a sheet or shroud. The double sheet only appeared at a much later date. Before entering the bed, the torch stuck on the chest or floor was extinguished. Sometimes also, valets or chambermaids, standing at the head of the bed, held a candle, waiting until their masters had fallen asleep. Rarely did anyone sleep alone; kings themselves were in the habit of having a bed-companion; Louis XIII was the first who dispensed with this custom. The promiscuousness of the bed reached its height in the xvth century, when hospitality was ordinarily offered in the conjugal bed, out of pure courtesy.

The lower middle classes and peasantry all slept together in one bed. In the hospitals, as late as 1620, three invalids were to be found sharing one bed, those about to die being alongside those dying, and without any distinction between the various diseases. The royal custom of remaining in bed to deal out justice (hence *Lit de justice*) dates back to far-off times; the Idle Kings of the viith century did not originate it and doubtlessly it was an inheritance, in France, of Eastern rites. This custom imparted an air of nobility which sufficed to accredit it, so much so, that the middle classes adopted it in their turn; in the xivth century it was good manners to remain in bed to receive visitors. This fashion had been primarily the privilege of the recently confined woman; for a fortnight she did herself the honour of gathering together in this way numerous gossips and entertained them (hence the phrases: *bedecked like a confined woman, a confined woman's gossiping*). Later, the custom spread to widows and then to newly-married ladies; under Louis XIV, the latter were not only led with great pomp

to the nuptial couch, but they also remained there the whole of the morrow, their friends coming to offer them their congratulations. The habit of staying in bed to receive folks became general to such an extent that it was persistently observed in the most ceremonious circumstances ; Richelieu, in his bed, awaited ambassadors

It may still be noted in passing that, to avoid any substitution of the child, the French queens were obliged to give birth in public ; this decree, evidently of barbarian origin, was still in force in Louis XVth's reign, since Marie-Antoinette was almost stifled, to death by the crowd which had thronged into her bed-chamber

Cabinets of ebony, inlaid with ivory. Spanish art, xviii century.

Florentine cabinet decorated with polychrome marble incrustations, together with a mirror in the same style, xviii century.

Large Venetian mirror of the xviii century.

Astronomical clock, English art, xviii century.

On the walls :

Two of the four embroidered hangings from Sully's apartments in the Arsenal (see the other two in room XXI and in the glass-case of the Holy Spirit). French art, about 1600.

Room XXIII — Chapel

On the walls :

Large retable of stone from the Sainte-Chapelle of Saint-Germer (Oise). French art, second half of the xiii century. Rectangular panel decorated with figures in high-relief. In the centre, under a depressed arch : Christ on the Cross between the Virgin and saint John. On either side of the central group : 1. Left, the Church ; right, the Synagogue. 2. Left, saint Peter ; right, saint

Paul. 3. Left, the Annunciation; right, the Visitation. 4. Left, a scene from the legend of Saint-Ouen; the saint cures a peasant whose right hand is paralysed because he has not rested on the Lord's Day. Beside this group, an archbishop. On the right, two scenes from the legend of Edward the Confessor, king of England, the king gives his ring to saint John the Evangelist who, disguised as a pilgrim, is asking him for alms; a messenger, sent by saint John, brings back the ring to king Edward and warns him of his approaching death.

RETABLES

The retable, or reredos, is a vertical partition erected on the altar-table to embellish the rear of it; it was now a fixture and now movable. It may be supposed that, originally and for liturgical reasons, the high-altars of cathedral churches never possessed fixed retables, for these were proper to chapels and abbey churches. As a consequence of the transformation in service rituals, the movable retables gradually disappeared, and fixed retables became general towards the end of the xvth century. They continued along the lines of the style of monumental statuary and were always decorated with religious scenes or figures. They were made of all kinds of material: gold, gilt silver and copper, enamels, stone, marble or alabaster, carved wood or painted panels, ivory, etc. The retable which is on the altar itself, should not be confused with the front portion of the altar or *tombstone* which serves as a base, and was thus named because, in early times, the altar was often erected on the tomb of a saint.

Bas-relief and wall statuettes of Yorkshire alabaster. English art, xvth century.

Reredos of Saint Pergrine or Saint Firmin (stone). French art, early xvth century. In the centre, a Calvary; on the left, the saint preaching; on the right, his decollation.

Reredos of wood, carved and gilt, early xvth century. In the centre, St. Gregory's Mass; on the left, the meeting of Abraham and Melchisedec; on the right,

the Last Supper From the Premonstratensian abbey at Averbode, near Liège.

On the altar :

The Virgin (seated) and Child, marble. Italian art, xivth century.

THE VIRGIN

We have already seen the rôle of protectress which the misery of the Middle Ages attributed to the Virgin (see *Pilgrimages*). Images of her are countless, and they naturally underwent, in the course of centuries, a transformation similar to the one observed in the figures of Christ. Even as the Redeemer retained a royal attitude and bore royal insignia (see *Crucifix*) till the end of the xith century, so did the Virgin, up to the same period, remain seated on a throne, holding the Infant exactly in front of her with, his face under hers. However, in the middle of the xith century, the figure began partly to lose the hieratic character which was still accentuated by symmetry; the Child was placed on the left knee. At the beginning of the xiiith century, the Virgin rose; standing; but still rigid, she bore the Infant Christ on her arm. Then the humanisation became more marked, and her smile was created in the middle of that century (see xiiith century). In the xivth century, the figure became affected by the weight of her divine burden. From then onwards, both the realism and compassion of the Mother became more and more pronounced, and she later deigned to lean towards men and hold out her Son to them. When definitely humanised by the Renaissance, she showed herself in the tender attitudes of her maternal rôle.

On the right and left of the altar :

The Virgin and Child (Virgin seated, mutilated statue, stone). French art, beginning of the xivth century.

The Virgin and Child (Virgin standing, stone). French art, end of the xvth century.

A Saint (stone). French art, first thirty years of xvth century.

Near the door :

The Virgin and Child (Virgin standing, stone). Bur-

gundian art, early xvth century. From the château of Saint-Apollinaire (near Dijon) where it was placed above the draw-bridge gateway.

Above the doorway :

Three divisions of a retable of painted and gilt terracotta. French art, middle of the xvth century. The marriage of the Virgin, the Adoration of the Angels, the Adoration of the Magi. From the church of Saint Eloi, near Bernay (Eure).

Room XXIV — Ivories

IVORY

The Orientals, the Hebrews, Egypt, Greece and Rome possessed for ivory ornaments a passionate taste which the early years of the Middle Ages inherited. Secular ivory figures thus reached our times, preserved and utilised by the Church. As early as the xiith century, ivory was in great honour for religious purposes; it was used for the facings of reliquaries, for caskets, images of saints book-binding plates, croziers, pyxes and chalices. Generally at that time, and even since, it was painted, at least in places, and probably gilt; in the middle of the xiiith century, it was already adapted to secular uses and Parisian workmen employed it in making writing tablets, knife handles, dice, chess-pawns and combs; in the xivth and xvth century, diptychs and triptychs multiplied as well as mirror-backs and caskets.

Should this French overproduction and infatuation be ascribed to the ivory importations which the people of Dieppe originated in 1364? The theory is anything but proved. About the same time, Northern Italy, which probably received its ivories from Venice, produced marriage caskets in profusion; very often even, when ivory was lacking, bone was carved and small plates were made which were let into the wood.

With the Renaissance, arts became varied and favour was distributed among them. Ivory, without disappearing entirely, enjoyed diminished credit, but it came into vogue again in

Louis XIII's reign, and was then used for inlaying ebony in the decoration of this austere furniture.

In the middle of the room, in a square glass-case (East side) :

A divinity crowned. Roman art, IIIrd century

Juno, carved horn. Roman art.

A casket. Byzantine art, IXth century.

Reliquary, French art, XIIIth century.

Large shrine. Rhenish art, XIIIth century.

Small shrine. Byzantine art, XIIIth century.

Portable altar ; XIIIth century mouldings, on an ivory reliquary, German art, XIIIth century.

Casket. French art, XIIIth century.

The Virgin and Child (Virgin standing. A piece of work of exceptional size) French art, XIVth century.

Knife handle, Italian (?) art, XIVth century.

Near to this square glass-case, a flat glass-case containing articles of capital interest :

The left leaf of a diptych, Roman art, about 400. (The right leaf is in the South Kensington Museum, London).

Leaf of the diptych of Arcobindus, consul in 506. Roman art.

Saint Paul. A facing plate, Italian (?) art, Vth century.

The signs of the Zodiac. Two book-binding plates. Byzantine art, IXth century.

A comb and case. Copt art, IIIrd or IVth century.

Two ivory pyxes. Latin art, Vth century.

An apostle. Latin art, IXth century.

A praying figure. Byzantine art, IXth century.

The blessing of Otho and Theophania. Byzantine art, Xth century.

Adam and Eve. Two plaques. Byzantine art, ixth century.

The death of the Virgin. Byzantine art, xiiith century.

Casket ornamentation. Scandinavian (?) art, xith or xiiith century.

Book-binding plate. Latin art, xiiith century.

In the adjoining flat glass-case :

Facing plate. German art. End of the xth century.

The Crucifixion. Carolingian art, ixth or xth century.

Book-binding plate. French art, xiiith century.

Tau-crossed pastoral staff of Morard, abbot of Saint Germain des Prés, Paris. French art, xith century.

Crozier from the abbey of Saint Martin at Pontoise. French art, beginning of the xiiith century.

Triptych. Italian art (Northern Italy), xivth century.

Comb and gravouère. French art, xvth century.

In the other square case, West side :

Seated Virgin. French art, beginning of the xiiith century (One of the finest specimens of carved ivory).

Abbatial crozier. French art, xiiith century.

Episcopal crozier. French art, xivth century, gilt copper mountings of the xvth century.

Caskets and fragments of caskets. Italian and French art, xvth century.

Justice and Crime. An ivory group. Italian (?) art. End of the xvth century.

Two flat cases, over against the preceding ones ; in the one on the Eastern side :

Diptyche and leaves of diptychs. French art, xivth century.

In front of the window, North side, in a flat case :

Spoons, knife handles, whistles, spilkens. French and Italian art, xvth and xvith century.

Tobacco-graters. Flemish art, xvith century.

On the wall, between the two windows, South side :

Large ivory retable. Northern Italy, xivth century.

Against the Western partition, in three wall-cases, on the right :

Pawns, chessmen and dice of ivory and bone, from the ixth to the xvith century.

On the left :

Naked children. Figures and groups in the round and low-reliefs by François Duquesnoy (?), Van Opstal, etc. Flemish art, xvith century.

Snuff-boxes, Flemish, of the xvith and xvith centuries, decorated with familiar or jocular scenes, comic characters, villagers, dancers, vagrants, etc.

VAGRANTS

During the whole of the Middle Ages, hordes of nomads of Eastern origin roamed over the Balkanic region and made their way all over Europe. The roads were their fatherland and in this wandering fatherland, all kinds of languages were spoken, which were made into one. Signs were agreed upon to allow them to recognise and help one another. On the outskirts of villages they carved hieroglyphics on the trunks of trees, which were so many warnings and informed coming bands of what they might hope for, or what they should fear, in the particular place. These isolated groups joined together to acquire strength; so on they created a corporation and contrived to found a State. Their misery became a kingdom, and they possessed a king who was elected yearly; they obeyed him, paid him taxes, which no one evaded, for their laws were severe. In the xvth century, the vagrants were strong enough to dare to enter towns. Sometimes they were

Mirror-cases. French art, xivth century.

David and Bathsheba. Mirror-case. German art, xvth century.

Memento mori and rosary beads. France and Spain, xvth and xviii century.

In the adjoining flat glass-case, Western side :

Entombment. French art, xviii century.

Ivory Paxes. French art, xvth to xviii century.

Ivory archers' Bracelets. Flemish art, xvth and xviii century.

Powder-horne and shoe-horne, xvth and xviii century.

In front of the windows, South side; in a flat glass-case :

Triptych in high-relief and in the round. French art, xivth century. From the church of Saint-Sulpice (Tarn). A work of rare beauty; notice particularly, on the lower portion of the central panel, the Virgin and the two angels.

Mirror-cases. French art, xivth century.

Small triptychs, diptychs, tablets, and diptych leaves. French art, xivth century.

TABLETS

Tablets smeared with wax, as used by the Greeks and Romans for writing notes thereon, remained in common use during the Middle Ages. In the xivth century twenty one makers, in Paris alone, manufactured this article. These tablets, in the form of double leaves or *diptych*, were often made of ivory, and decorated with bas-reliefs on the outsides.

In front of the other window, South side :

Fragments of a reredoe. French art, xivth century. (Partly restored).

Casket plaques. French art, xvth century.

In front of the window, North side, in a flat case :

Spoons, knife handles, whistles, spilikins. French and Italian art, xvth and xvith century.

Tobacco-graters. Flemish art, xvith century.

On the wall, between the two windows, South side :

Large ivory retable. Northern Italy, xivth century.

Against the Western partition, in three wall-cases, on the right :

Pawns, chessmen and dice of ivory and bone, from the ixth to the xvith century.

On the left :

Naked children. Figures and groups in the round and low-reliefs by François Duquesnoy (?), Van Opstal, etc. Flemish art, xvith century.

Snuff-boxes, Flemish, of the xvith and xvith centuries, decorated with familiar or jocular scenes, comic characters, villagers, dancers, vagrants, etc.

VAGRANTS

During the whole of the Middle Ages, hordes of nomads of Eastern origin roamed over the Balkanic region and made their way all over Europe. The roads were their fatherland and in this wandering fatherland, all kinds of languages were spoken, which were made into one. Signs were agreed upon to allow them to recognise and help one another. On the outskirts of villages they carved hieroglyphics on the trunks of trees, which were so many warnings and informed coming bands of what they might hope for, or what they should fear, in the particular place. These isolated groups joined together to acquire strength; so on they created a corporation and contrived to found a State. Their misery became a kingdom, and they possessed a king who was elected yearly; they obeyed him, paid him taxes, which no one evaded, for their laws were severe. In the xvth century, the vagrants were strong enough to dare to enter towns. Sometimes they were

tolerated, and sometimes they were hanged. Louis XI, whose policy adapted itself to any arrangement that afforded a temporary advantage, offered them shelter in Paris.

So then they were recognised: they named themselves the Vagrants (*Truands*). The Halles district, where they lived, became their domain and was called the « Court of Miracles ». Indeed, miracles actually did take place there every evening, for there it was that beggars got rid of their crutches or sham wounds, it was a Court also, since they had their king, dignitaries and a banner. The Grand *Cotre* of the Truands, who perhaps took his name from the Grand *Cotue* of the Hebrews, was Emperor of Galilee. He wore a crown and princely mantle when he presided at his bed of justice to sentence a guilty subject, appoint a duke, fix a mission, send an ambassador, superintend the good order of the schools, or preside over the examination of candidates, for in that kingdom of thieves, rank was acquired by merit; no one was allowed to fulfil, in crime, functions to which he was not destined by his personal capacity or previous studies. At evening-schools, the higher grade members gave courses in epilepsy, lameness, begging, fever, purse-snatching and scurvy; they instructed how to kill properly and shiver with cold; the corporation painters taught how to paint on the human skin wounds which were masterpieces. When morning dawned, at Mass or market time, the Vagrants went off to their business; around the churches, on market squares and at the corners of bridges, stood the orphans and « millards »; the wounded, malingerers, those with callosities, the wretches, hypocrites and blackguards. After these professors had disappeared, several of the titles which they had borne outlived them, and their slang phrases passed into the French language.

and Hebrew, were poured forth confusedly into the jargon of that universal sink of vice, When Louis XIV's soldiers entered this cess-pool, they found accumulated there the mire and vermine of centuries.

Against the same partition, in the central case :

Figures of gilt ivory, jet, etc. Spanish and Portuguese art, xvth and xviii century.

Patch-boxes, sweetmeat-boxes, etc. French and Flemish art, from the xvth to the xviii century.

Around the room : —

Furniture and fragments of furniture, of carved ebony, several inlaid with ivory. French, Flemish, Spanish art, etc., of the xviii century.

Room XXV — Glass-ware and Illuminations

GLASS

The invention of glass very probably dates back to prehistoric times ; as for its industrial utilisation, this is ascribed to Phœnicia. In Egypt, the tombs of Beni-Hassan (xviii dynasty, 1500 years B. C.) shew us glass-workers blowing flasks according to the same methods that are still employed to-day. In the time of Strabo, the Alexandria work-shops enjoyed a very widespread celebrity. Early glass-ware was opaque, some articles being hardly translucent. According to Pliny, transparent glass would appear to be an Italic creation ; the same author states that the processes for the vitrification of nitred sand passed from Italy into Gaul and Spain. It may be supposed, however, that the volcanic regions of Gaul afforded their inhabitants the possibility of a local invention ; it is quite likely too that the Gauls, whose incursions into the East were countless, brought back with them, straight from Asia or Africa, the idea of this craft, for which they developed a passion at an early date. They employed glass-ware more for personal adornment (bracelets, necklaces, clasps, etc.) than for domestic uses, and on account of their unalterable nature glass-articles were used for funeral purposes : phials

abound in Merovingian as well as in Roman tombs. In the xiith century, glass-working became general in France, and in the xivth century it already constituted a regular industry; the use of glass for table utensils was common enough in St Louis's time to allow drinking-vases to be known under the name of « glasses », no matter of what they were made. In Louis XI's reign, in order to hide silver plate, which was being commandeered by the king, ewers and goblets of glass tended to become more general still, so much so that, fifty years later, hawkers went round the streets offering for sale productions which had now become vulgar.

The glass industry, however, was the only one to which noblemen, to whom all manual labour meant degradation, could give themselves up without lowering themselves: glass-workers were gentlemen.

The Renaissance produced admirable glass-ware, in Venice at first, then in France and Germany. In the xviiith century a notable decline began to set in. In the xviiith, crystal was preferred, but at the end of the xixth, several great French artists, such as Cros, Lalique and Gallé revived the beautiful art of glass-working.

*Four square glass-cases, about the four corners of the room.
In the S.-W. corner one are the oldest and rarest pieces :*

Large centre basin of enamelled glass. Arabian art, xiiith century.

Mosque lamp. Enamelled glass. Arabian art, xivth century.

Glass plates engraved on gilding. French art, xivth century.

Tray on a foot. Enamelled glass of Arabian style. Venetian art, xvth century.

Tazza of blue, enamelled, and gilt glass. Venetian art, xvth century. (The foot restored).

Pilgrim's bottle decorated in Arabian style. Enamelled and gilt glass. Venetian art, xvth century.

Large glass, enamelled with polychromatic beads. Venetian art, xvth century.

Tazza, of enamelled glass, with figures and dedicatory inscription. French art (Poitou), xvith century.

Bowls of gilt and enamelled glass. Venetian art, xvith century.

In the case in the N.-W. corner :

Venetian glass-ware, xvith to xviiiith century.

In the case in the N.-E. corner :

French glass-ware, xviiiith and xviiiith centuries :

Goblet of enamelled glass, decorated with polychrome designs. French art (Poitou?), xvith century.

Figurines of opaque glass. Nevers workshops, xviiiith and xviiiith century.

Flasks. Orleans workshops, xviiiith and xviiiith century.

Venetian glasses, opaque and translucent, xviiiith and xviiiith century.

In the glass-case in the S.-E. corner :

Glass-ware from Germany, the Low-Countries and Bohemia ; engraved, enamelled, crackled, opaque glasses, from the xvith to the xviiiith century.

In front of the windows, South side, in two cases :

Dishes, cups and trays, of enamelled, engraved, painted, and gilt glass. Venetian art, xvith and xviiiith century.

In front of the windows, North side, in a flat case :

Dishes with painting under glass. Venetian art, xvith and xviiiith century.

In front of the central window, North side :

Wax medallions. Portraits of famous persons. French art, xvith century.

Wax medallions. Portraits, figures and groups, in low and high-relief, French art, xvith and xviiiith century.

Against the Western partition :

Monumental fire-place, from a house at Troyes. French art, second half of the xvth century.

Adjoining the fire-place, in a piece of furniture with two wings :

A collection of illuminated prints and manuscripts, French art, from the early Middle Ages up to the xvth century.

In front of the fire-place, in a hexagonal case :

A mourner. Alabaster, by Claus de Werve. From the tomb of Philippe the Bold. Burgundian art, about 1410.

A mourner. Alabaster, by Jean de la Huerta. From the tomb of Jean the Fearless. Burgundian art, middle of the xvth century. (These two tombs, originally erected in the Chartreuse of Champmol, near Dijon, and mutilated during the Revolution, are now in the Museum of Dijon).

The replica of another mourner from the tomb of Jean the Fearless, by Jean de la Huerta. (An identical figure decorates the monument at Dijon).

A mourner. Alabaster. Burgundian art, xvth century.

The Virgin and Child. Alabaster. Burgundian art, xvth century.

In the middle of the room :

The Virgin and Child (Virgin standing). Alabaster. French art, xivth century. From the Hospice of Sens

Jeanne of Laval (wife of king René) as donor. Marble. French art, end of the xvth century. From a church at Aix-en-Provence.

A female mourner. Alabaster. French art, end of the xvth century.

Staff of Cardinal Montelparo. Italian art, end of the xvth century.

Jesus in the Garden of Olives. A group of carved wood. Flemish art, xvith century.

The Virgin and Child (one of the earliest paintings on canvas). French art, xvth century.

The Adoration of the Magi. Painting on wood, ascribed to Luca d'Olanda (1523); or from the Antwerp school.

Musicians. Two painted panels, ascribed to Michel Wolgemuth. Nuremberg School, about 1480.

Unicorn's horn (in reality a narwal's tusk) presented to Charlemagne by the Sultan Haroun-al-Raschid, in 807, deposited by the emperor in the imperial Treasury at Aix-la-Chapelle, and by his grandson Charles the Bald in the Treasury of the abbey church of St. Denis, where it was preciousely preserved for 950 years, to protect the French kings against poisoning. Various notches may be seen thereon. It was broken during the Revolution, taken to the Cabinet of Medals (National Library) and recently added to the Cluny Museum.

THE UNICORN

The *unicorn*, a fabulous animal the invention of which is lost in the earliest times and seems to have come down to us from the Far East, was the symbol of virginity and purity. For this reason, the horn of this animal was considered as being endowed with the virtue of revealing treasons and the presence of poisons in foodstuffs; again, it was the best of all antidotes. Poisoning was a perpetual peril for kings or lords in the Middle Ages and especially the Renaissance; the smallest pieces of this rare horn were therefore extremely sought for. In the xvth century, they cost ten times more than gold. The Ducal palace in Venice possesses a similar horn, but of smaller dimensions.

The *Unicorn*, by reason of its virtues, was used as an emblem by apothecaries, maidens, and magistrates. Again, when it appeared as a heraldic supporter, it denoted nobility of the robe (see the tapestries known as « the Lady with the Unicorn ») in contradistinction to the *Lion* which denoted the nobility of the sword.

Near by, in a flat glass case, lying on a xvith century table :

Prayer books. French art, xivth, xvth and xvith century.

THE CALENDAR

Throughout the Middle Ages, religious festivals gave their name to the divisions of the year and constituted the habitual calendar ; these feasts being movable, the designations were inconsistent and at times even varied from one place to another. Moreover, the year began at Easter, and therefore, a difference of several weeks would occur in the length of the year. By means of an edict dated August 4th 1564, Henry III decided that the year should begin on January 1st. Later, in 1582, Pope Gregory instituted the calendar to which he gave his name (*Gregorian*) and which, in spite of its defects, has been preserved to this day.

Prayer-books, French xvth century manuscript, with family inscriptions, viz : births, baptisms, and deaths, up to the end of the xviiith century. (This manuscript typifies a custom, and represents what, during centuries, constituted in France, the safest document relating to civil « condition ».)

CIVIL CONDITION

The use of surnames in Christendom hardly dates back further than the xith century. Up to that time, baptismal names alone existed, but in the enormous promiscuity of the Crusades, when these names were repeated endlessly, they proved insufficient. At the same time as each knight adopted distinctive armorial bearings (see *Coat of arms*), it became usual to add a qualificative to the baptismal name, a surname originating from a physical or moral peculiarity, or from some adventure, and which remained a patronymic. This new custom with noble families spread later to the middle classes in towns, and then to the country folk. However, whether noble or villain, no one had a civil « condition » ; people were born and died without leaving any record behind them ; even the age of kings was uncertain (e. g. Louis VI, Charles VII, etc.). The head of the family, when he knew how to write, or failing

him, the chaplain in the lords' households, inscribed the interments and memorable dates in a prayer-book which was handed down from generation to generation. Marriages were more carefully mentioned for two reasons; one of nobility, as it was essential that each person should know of his alliances, origins and quarters of nobility; the other, a religious one, was preponderant, for the Church forbade marriages between certain relations.

The Church had therefore recommended that priests should register the marriages, births and deaths in the Parish-Book, but such inscriptions were extremely irregular. The Council of Trent formally decreed them in 1563, but its orders were soon neglected. Royal decrees were hardly better observed. It should be noted however that from the revocation of the Edict of Nantes (1685) until 1789, the Protestants were precluded from any registration since they were outside the pale of the Church. The present French registers date from 1792.

At the bottom of the room, against the eastern partition, in a flat case :

Other manuscripts, prayer-books, illuminations, of the xvth and xvith centuries.

PAPER

Most mediæval manuscripts were on vellum, strictly speaking, still-born calf skin (washed, pounced, etc.) Paper made from cotton was common, however, and was used as early as the xith century; paper made from rags only appears to date from the xiiith century, and its use only became general after the invention of printing, that is to say about the reign of Louis XI.

The earliest books printed in Paris. Vellums, wood engravings picked out with polychrome designs, executed in the workshops of Guillaume Anabat, beginning of the xvth century. (See the notice on *Playing-cards*, room IX).

Against the same partition, in three wall-cases :

Carved rock-crystals, xviiith and xviiiith century.

Wooden Caskets decorated with moulded paste, white or polychrome, picked out with gold. Italian art, end of the xvth and xvith century.

Reliquary decorated with paste French art, xiiith century.

Marriage casket with paste decoration. French art, xivth century.

Casket decorated with paste. Italian art, xvith century.

Snuff-boxes, sweetmeat-boxes, and miniatures, from the xviiith to the beginning of the xixth century.

In a flat case, below the third wall-case :

Painted portraits, miniatures and medallions, xvith and xviiith century.

THE BEARD AND HAIR

In the early Middle Ages, the wearing of long hair was a sign of liberty, for serfs' hair was cut and dispossessed princes were shorn even before they were confined in a cloister. The fashion of wearing a long beard became discredited at the end of the xiiith century ; it reappeared in the middle of the xivth, but lasted a short while only. Francis I, at the beginning of the xvth century, brought it back into favour. One day, for amusement, Louis XIII hit on the idea of having the officers of his household shaved, leaving them only with their moustaches and a pointed tuft on the chin ; this at once changed the fashion. About the same time, ladies, who hitherto had their hair dressed by their chamber-maids, suddenly had recourse to male hair-dressers. Louis XIV, on account of the excrescences on his head, adopted a high wig, and the whole of Europe wore a wig up to the French Revolution.

Transformation portraits, with interchangeable sheets of mica. France, end of the xviiith century.

Around the room :

Inlaid figures, of marble and alabaster French and English art, xixth and xvth century.

Spanish cabinet, xvth century. (The foot is modern).

THE CABINET

This piece of furniture appeared in the xvth century; it was at first only a transformation of the chest (*bahut*), reduced in size and, like it, portable. It was placed on a table set apart for this purpose, the feet of which varied both in number and height. Soon afterwards, the cabinet was fixed to these feet and the new article which resulted therefrom, acquired several of the characteristics of the ancient credence. Despite these exterior transformations, it retained compartments or drawers in the interior, and served for storing precious articles. Its decoration was nearly always luxurious. Florence, in the xvth century, ornamented the cabinets with marquetrys of multicoloured marbles or rare stones; In France, in the reign of Louis XIII, there was a partiality for cabinets of ebony inlaid with ivory, and this soberness of colour in furniture logically corresponded to the soberness in dress, the dark velvets of which were enhanced with white cloth. Under Louis XIV, the general luxury banished all such austerities, and henceforth they multiplied precious woods, insets of bright stones or metals, Boulle marquetrys, and Chinese lackers which were soon copied in France. The cabinet was now adorned with all possible splendours, since it was, preeminently, the familiar and intimate piece of furniture of the most noble ladies and the highest lords.

Venetian cabinet, xviii century.

Three stone statues; saint Savinian, Astronomy, saint Savinia (?). Workshop of Jacques Juliot of Troyes. French art, middle of the xvth century.

Thirteen front portions of marriage caskets, painted panels enhanced with gold. Italian art, xvth and xvth century. (Famous pieces, from the Campana collection. See the notice on *Chests*, room III).

Altar-cloth, embroidered with glass beads. French art, end of xviii century.

The Virgin. Painted and gilt glass. Italian art, xvth century.

series of dramas could be set in motion. In the two festivals which commemorate these two events, at Christmas as at Easter, the Mass assumed a special character and Faith endeavoured, to the best of its ability, to celebrate the two solemn moments. In the 19th century, the Christmas Mass was already a « tableau vivant » wherein the clerks, dressed up as prophets, stood around the priest who read the story of the divine holocaust.

The inactivity of the silent actors did not suffice for long ; a third epoch was at hand when the disguised clerks, in order to portray faithfully the details of their parts, commenced to move about ; thus they introduced mimic scenes. But their growing importance necessitated a vaster setting, and this brought about the fourth epoch ; from the high-altar where these scenes had hitherto been played, they were transferred to the precincts where they had more space to move about. A stage became indispensable ; thus the first theatre was built, still adjoining the church, but already outside it. Then it was that a few words of French were added to the Latin ones to render the scenes more intelligible, and thus the text tended to become more popular at the same time as the stage endeavoured to come abroad.

To this transformation of the « *Noëls* », which were performed at Christmas, there corresponded an identical transformation in the « *Mysteries* », which took place at Easter ; they had one peculiarity in common and this proved of great importance. — Such characters as moved about and spoke were exclusively of subsidiary importance ; the sacred figures, the Virgin and Christ, remained silent, for the veneration they inspired forbade them to pronounce human words.

That very hindrance was to become the cause of a still further step in the evolution of the idea, for the circle of those playing a speaking part necessarily grew larger, and their number multiplied ; at the same time, the repertory of the subjects treated was enriched. Thus the fifth epoch was reached ; Saints were added to the Prophets ; they were numerous and their addition procured quite an unlimited series of dramas, viz : the *Miracle* plays. With them and by them, a new world appeared, a world rich in popular legends and closely akin to our own. These saints were men, like ourselves ; they had lived a life almost similar to ours, amongst the incidents and promiscuities of daily existence. They provided

Small low-reliefs of alabaster. Flemish art (Malines), end of xvth century and early xviii century.

The Mass of St. Gregory. Triptych. Flemish art, late xvth century.

THE ORIGIN OF THE DRAMA

The drama has everywhere been the offspring of the Church. Even as, in Greek paganism, the feasts of Dionysus engendered tragedy, so also the two anniversaries of Christ, Christmas and Easter, Birth and Resurrection produced with us, two series of plays which at first only tended to render the meaning of the symbols more accessible and clearer, as well as more touching; from this our drama originated.

At the dawn of Christianity, worship involved no ritual, for the early adepts were content with an annual banquet; these feasts, simple evocations of the « Lord's Supper », were only festivals of spiritual fraternity. Soon, however, a more mystic ceremony was evolved to supply new wants of the mind, and this recalled the various phases of the Passion. The Mass is a true drama, ending with the voluntary sacrifice of Christ and crowned by the triumph of an apotheosis. The institution of the Mass was henceforth consecrated and going to hold good through the ages, but it was quite inevitable that its presentation should occasionally undergo transformation, according to the varying requirements of times and countries, as the new religion spread.

Leaving Rome, it reached the provinces. There it found itself in the presence of youthful and still barbarian races, the simple and painful childhood of peoples to whom Roman symbolism could scarcely be intelligible. To arouse them, an abstraction could not suffice; to impress their minds, it was necessary to touch their senses; pictures and music were needed to interest their eyes and ears, for seeing and hearing would be an inducement to understanding; the visible element would facilitate intelligence and the musical element would intensify comprehension. Now the Christian myth is built up on two essential ideas, those of Incarnation and Redemption. God became man and suffered to redeem mankind. The two distinct actions, Nativity and Passion, took place in two distinct surroundings, Bethlehem and Golgotha; round these two facts, two groups of symbols could be co-ordinate, two

series of dramas could be set in motion. In the two festivals which commemorate these two events, at Christmas as at Easter, the Mass assumed a special character and Faith endeavoured, to the best of its ability, to celebrate the two solemn moments. In the 19th century, the Christmas Mass was already a « *tableau vivant* » wherein the clerks, dressed up as prophets, stood around the priest who read the story of the divine holocaust.

The inactivity of the silent actors did not suffice for long; a third epoch was at hand when the disguised clerks, in order to portray faithfully the details of their parts, commenced to move about; thus they introduced mimic scenes. But their growing importance necessitated a vaster setting, and this brought about the fourth epoch; from the high-altar where these scenes had hitherto been played, they were transferred to the precincts where they had more space to move about. A stage became indispensable; thus the first theatre was built, still adjoining the church, but already outside it. Then it was that a few words of French were added to the Latin ones to render the scenes more intelligible, and thus the text tended to become more popular at the same time as the stage endeavoured to come abroad.

To this transformation of the « *Noëls* », which were performed at Christmas, there corresponded an identical transformation in the « *Mysteries* », which took place at Easter; they had one peculiarity in common and this proved of great importance. Such characters as moved about and spoke were exclusively of subsidiary importance; the sacred figures, the Virgin and Christ, remained silent, for the veneration they inspired forbade them to pronounce human words.

That very hindrance was to become the cause of a still further step in the evolution of the idea, for the circle of those playing a speaking part necessarily grew larger, and their number multiplied; at the same time, the repertory of the subjects treated was enriched. Thus the fifth epoch was reached; Saints were added to the Prophets; they were numerous and their addition procured quite an unlimited series of dramas, viz: the *Miracle* plays. With them and by them, a new world appeared, a world rich in popular legends and closely akin to our own. These saints were men, like ourselves; they had lived a life almost similar to ours, amongst the incidents and promiscuities of daily existence. They provided

therefore more human and realistic elements, as well as scenes which often dared to be trivial, burlesque and vulgar; the morals of the period found an opportunity to stand out clearly and striking. Man now appeared on the stage, he exhibited himself in all his frailty and manifold distress, sometimes in anguish and often ridiculous. The people round about laughed, and thus was legitimate Comedy had been born.

Thus, from Mass to « Noels » from « Noels » to « Mysteries », and from « Mysteries » to « Miracles », things had moved almost imperceptibly, starting from divine symbols, a purely human spectacle had been arrived at. Sixth epoch: the raillery which was latent at the very bottom of French genius could now give itself full scope. When the Church began to be anxious at the freedom which was becoming excessive and the frequent scandals, it was already too late. — Seventh epoch: Henry III prohibited the « Mysteries ». So let it be! The audience contented themselves with Farces. The stage no longer stood at the portals of the church; being driven away, it was erected in the city. Now it was independent. The comedians were excommunicated in vain; the people had acquired a taste for their plays. In addition to this, printing had been invented. Literature stepped in; Corneille, Molière, and Racine arose, as Æschylus, Euripides, Sophocles and Aristophanes had done in former times, to show us simply the working of human passions.

Two writing tables inlaid with pewter, French art, xviii century.

Over the landing doorway:

Abutment of a mantelpiece of carved stone, by Corneille Floris, Flemish art, 1555. From the house of the sculptor at Antwerp.

Close to the door:

Two scenes from the Italian Comedy. Nevers blown enamels. End of xviii century.

In the windows:

Swiss stained glass, xvth and xviii centuries.

Room XXVI, known as the Crown Room

In front of the windows on the North side, in two flat glass-cases. Right case, jewels from the 1st to the XIIIth century.

Gallic torques of solid gold.

Necklaces, bracelets, rings, ear-rings of gold, from the Gallic and Gallo-Roman period.

Fibulæ and buttons of bronze, decorated with polychrome enamels. Gallic and Gallo-Roman period.

Small glass ware, Gallic, found in tombs.

Sword scabbard inlaid with gold. Merovingian art.

Merovingian jewels, insignia, ear-rings, buttons and fibulæ of bronze and silver, decorated with polychrome pieces of glass.

Pieces of harness and fibulæ of chased bronze. Merovingian art.

Mantle clasp of bronze, Carolingian period.

Girdle tip of repoussé and filigree gold decorated with four lions in oriental style. XIth or XIIth century.

Silver-ware plaque of filigree. French art, XIIth century.

Cover of engraved filigree silver. French art, about 1100. (The cover of a terra cotta jar containing a treasure of provincial coins of the end of the XIIth century, found at Gometz-le-Château, Seine-et-Oise).

Inlaid cross of repoussé gold. French art, XIIth century.

Left-hand glass-case; XIIIth to XIXth century jewelry :

Rings of gold, silver and bronze, from the XIIIth to the XVth century.

Pontifical rings, XVth century.

Poison rings. Italy, xvth century.

The Arthur de Rothschild collection ; rings from the xth to the xixth century.

Renaissance gold and silver-ware, Italian and French, of chased gold, gilt bronze, enamelled gold, engraved stones, carved cores, etc.

Necklace of the Annunziata of Savoy. xvth century.

Girdles and buckles. France, Spain, Germany, from the xvth to the xviii century.

GIRDLES

In the Middle Ages, the girdle was of considerable importance ; it was doubly necessary, on account of first the fulness of the robe, and secondly the lack of pockets ; for men, it had primarily been but a cross-belt ; for women, as late as the xth century, it was a piece of material knotted over the lap with the ends hanging down in front ; from the xth century, it was adorned with a buckle, to which were hung various objects of frequent use and indispensable to either sex ; ladies hung thereon their keys and *escarcelles* (see this word), mirrors and prayer-beads also ; workmen suspended their tools from it, and « men at arms » their « braguemard » (kind of dagger on the flap) etc. Soon other decorations were added to the original buckle, and metal ornaments quickly covered the entire belt which ultimately (xivth century) acquired excessive richness, being often made of precious materials, chased and heavily laden with stones. Middle-class women envied the noble ladies for these, and the courtezans likewise wore them ; hence the comforting proverb : « A good reputation is worth more than a golden girdle ».

As it grew narrower, in the xvth century, the girdle was called the *demi-ceint* (half-belt), and ladies wore it under this name for a century and a half ; at the beginning of the xviii century the « demi-ceint » fell out of favour, and was so simplified as to be only worn by women of the lower classes, finally becoming the characteristic of female servants.

In the middle of the room, in a square glass-case :

Crowns of Visigoth kings, viii century. One of them

engraved with the name of Recceswind (d. 672). Found in 1859 at Fuente de Guarrazar, near Toledo.

In the middle of the wall :

Altar-cloth, of gold. German art, beginning of the xth century. Given to Basle cathedral by the emperor of Germany, Henry II (Saint Henry, d. 1024). Preserved in the treasury of the said cathedral up to 1836; at that time there arose, between the town and the canton, a discussion as to its ownership; this historic piece was then sold by auction and bought by a private individual who sold it to the Cluny Museum.

Beneath the altar-cloth :

Carpet of wool with velvet insets and silk embroideries. End of xvth, or xvith century. Same origin.

Southern part of the room, in two square cases :

Golden rose conferred on the Prince-Bishop of Basle by Pope Clement V. Early xivth century. From the same treasury.

GOLDEN ROSES

Every year the Pope ordered a rose with golden leaves to be made, which he solemnly blessed and carried in procession; he afterwards sent it to some prelate, prince or princess, as a token of his particular satisfaction. This ceremony took place on the fourth Sunday in Lent, which was therefore called « Rose Sunday ».

Two Mon's heads, knobs of a Roman seat; hollowed rock-crystal, xiii or xivth century. Found in a tomb in the Rhine district.

Gospel's Book-cover. Gold and silver-work mountings with filigrees. French art, beginning of xiiiith century.

Ivory plates : the Crucifixion, Carolingian art, ixth century; the Virgin and six apostles, composite work.

Cross-shaped reliquary, decorated with filigree and cabochon stones. French art, xiiiith century.

Phylactery of filigree copper. Flemish art, beginning of the XIIIth century.

Casket of rock-crystal, with filigree copper mountings, ornamented with cabochon stones. German art, XIIIth century.

Small circular reliquary ornamented with pearls and precious stones, of enamelled silver-gilt. French art, XIVth century.

Phylactery ornamented with pearls and rock-crystal cabochons. Mosan art. XIIIth century.

Clasp of a priest's cope, charged with an eagle and ornamented with pearls and precious stones. German art, XIVth century.

Medallion, circular, representing a human mask. An ancient stone, French mounting of the XVth century.

« Mariolo ». Small figure of the Virgin, enclosed in a bell-tower. Silver-gilt work. French art, XVth century.

Secular reliquaries, of silver or gilt copper. French art, XVth century.

: Set of chessmen of rock crystal. Composite article.

Plates of engraved crystal. Italian and French art, XVth century.

Pair of stirrups, bearing Francis I's cipher, of gilt bronze. French art, early XVth century.

Dog's collar of repoussé gilt copper, with the cipher of Philip V, king of Spain. Early XVIIIth century.

In front of the window on the South side :

Collection of treasure-troves found in French soil; gold, silver and bronze coins, from the Gallic period to the XVIIIth century.

MONEY

The idea of giving a conventional value to counters of any kind, in order to facilitate exchanges, dates back to very ancient antiquity; precious metals, such as gold and silver, were the

BOAT-SHAPED RECEPTACLES (*Nefs*)

In the Middle Ages, spells were cast over persons whose death was desired, and this superstition, which dates back to primitive mankind, had not altogether disappeared at the time of the Renaissance. Towards the end of the xivth century, when faith was already on the wane, murdering was willingly resorted to as being more practical and safer, and it became frequent in the higher spheres. From the end of the xvth century, however, Italian fashions brought poison into prominence. It was already very much dreaded, but its use became so common for a century and a half that precautions were needed. People were no longer content with having their beverages and food tested by servants, it also became necessary to examine closely all table requisites which were used by princes and high personages. To this effect, the lord had before him on the table, a gold or silver container in which all the table requisites were enclosed [origin of the *surtout* (over-all)]. This table-piece took the form of a *nef* or boat, and bore that name. Made of gold, silver, or enamelled gilt bronze, it could be locked; hence its later name of *cadenas* (padlock, *catena*, chain) which it still bore in the xviiith century, for this custom could not disappear quickly after the Great Terror of 1670-1680, when « the majority of those who went to confession owned to having poisoned someone or another ».

On the right and left, in two flat glass-cases :

Cases, flasks, trusses, lorgnettes, whisk-brushes, chate-laines, etc., xviiith and xviiiith century.

Embroidery scissors belonging to Marie-Antoinette.

Sweetmeat-boxes, snuff-boxes, boxes, flasks and cups, Cameos and intaglios, seals, small crosses, rare stones, engraved mother o'pearl, xviii to xviiiith century.

Near the door :

Table-plate, silver and silver-gilt, French, German and English art, xviiiith and xviiiith century.

Northern part of the room, in four glass-cases :

Clocks and watches and scientific instruments.

TIME-PIECES

The *sun-dial* and *sand-glass* are of ancient origin, but the former could not be of very much use in cloudy weather. Throughout the Middle Ages, there was no other information about the time than the position of the sun, cock-crow, the bellman, and the bells of countless convents and churches ringing for worship. Thus the clergy indicated the hour, but they themselves obtained it from very unreliable sources, which varied with the seasons (the rising and setting of the sun, position of the stars according to a plumb-line set on the polar star). So far as mechanical means were concerned, graduated candles were utilised which burnt themselves out in a given space of time; these burnt day and night. The night was divided into three candles. The phrase « About the second candle of the night » is frequently found in decrees and narratives of that period. The *clepsydre* or water-clock, founded on the same principle as the sand-glass and of equally ancient origin, was a reservoir of water, which slowly emptied itself and indicated the hour by the level of the water. This system was improved upon by means of floats, mechanical devices and even bells. In 807, Charlemagne received from the Kaliph Haroun-al-Raschid, an ingenious water-clock which was the admiration of the Court. Water-clocks remained in use until the middle of the xviiith century and the use of sand-glasses lasted much longer still.

However, « mechanical reloges », coarse instruments with fly-wheels and counter-weights, had already made their appearance; Philip the Fair possessed one of these, in 1314; Charles V, in 1370, installed the first public time-piece in Paris and ordered the churches to give the regulation time. In 1481, Louis XI ordered a portable clock for his own use. However, these clumsy and unreliable instruments only gave approximate indications.

It would appear that, twenty years later, Nuremberg mechanics invented the spring to replace the counter-weight, and the fusees, to regularise the action of the spring. Clocks became less cumbersome and were easily moved from place to place; these small apparatuses of copper, with elegant and varied shapes, were called *montres* and laid on the furniture. They were still very rare under Francis I and generally came from Germany; however, the king had his own *orlogeur*, clockmaker, (Jean

Couldray) from whom he ordered two watches. In 1544, he established the corporation of Parisian *orlogeurs* and regulated their production. The watches caused an infatuation, above all when the surprising little trinkets appeared which could be carried about by their owners; they were then called *Nuremberg eggs*. Soon afterwards, they were made in all kinds of shapes, hexagonal, oval, round, in the form of crosses, hearts, books and stars; some were even made so tiny that they could be carried as rings or ear-rings. However, these mechanisms were as yet hardly scientific, they had to be wound up every six hours and varied considerably.

In 1583, Galileo, then nineteen years old, discovered the mathematical laws of the pendulum. But they were only applied to clock-making in 1657, by Christian Huygens, a Dutchman of learning who came and settled in Paris. Then only did clock-making acquire a scientific character (pendules, pendulum-clocks). This rising French industry quickly prospered, but was abruptly killed by the revocation of the Edict of Nantes (1685), for nearly all French clock-makers were Protestants, - owing to their connections with Holland, Germany and England; so they fled to Geneva and London. Ruined for more than a century, the clock-making industry remained dependent upon those countries, and only revived under Louis XV when wonderful gems of clocks were fabricated; but the prosperity which Louis XIV had driven away was never regained.

Table-clocks of gilt copper. French, German and Italian art, end of xvith, and xvith century.

Watches and watch-cases, of engraved, open-worked, and gilt copper. French and German art, xvith century.

Books on astrology, bearing the arms of Henry II. French art, xvith century.

Alarm-clock, French workmanship, xvith century.

Collection of xvith century watches, round, oval, octagonal, in the form of an olive, cross, and skeleton's head, etc., of silver or engraved and gilt copper, hollowed-out crystal and box-wood, etc. French, English and German art.

Collection of .xviii century watches, of gold and chased, engraved and enamelled silver, porcelain, hard and precious stones, ornamented with miniatures, pearls, roses, etc. French, English, and German art.

Collection of astrolabes, sundials, and compasses, from the xvth to the xviii century.

On the walls :

Six tapestries representing scenes from seigniorial life. French art, about 1500.

Returning to the Glass-ware room, the visitor will find a folding door opening on to the stair-case ; this leads to the second floor.

SECOND FLOOR

Room XXVII

Sacerdotal Vestments and Embroideries

Against the wall, East side, in three flat glass-cases ; first case :

Remains of sacerdotal vestments, silk materials with polychrome decoration, woven with inscriptions from the Koran. Found in the tomb of Bernard Lacarre, Bishop of Bayonne (1188-1213). Oriental art, xiii century.

SILK

Although silk was already known in Homer's time, it only appears to have been introduced into Europe by Alexander the Great (ivth century B. C.). Its Chinese names, *ssu*, *sir*, and its Greek name, *sér*, indicate both its origin and its channel of transmission. The countries of yellow race were known of the Ancients by the generic name of « Country of the Sères », which really meant to them « the Silk Country ». Thus our very word " silk " would appear to be a synonym of *China*. Very rare and infinitely costly to begin with, since it was

brought by land at a thousand risks, this material only tended to become accredited in Europe when Roman customs began to grow effeminate, that is to say, just when Christ was preaching in Judea; the Emperor Tiberius forbade by decree the wearing of all silk garments by men; amongst all the crimes of Heliogabalus, that of possessing a silken robe was especially cast up against him as a disgrace. However, Byzantium did not fail to adopt this material; the Byzantines, who, as early as the vth century, so greatly developed the Eastern art of dyeing materials, used silk very largely, but they continued to receive it from Asia, from Persia. It is very probable that their native productions only date from the time of Justinian (vith century). Nevertheless, eastern materials and designs continued to be the fashion. Christian workmen, established in Byzantium, or Syria, introduced into pagan patterns the emblems of their own worship, which the orientals reproduced in their turn. It was thus that symbols of rival religions are found woven into the same fabric. / From the time of the early Crusades, these productions were much admired; they were brought back in large numbers and the Church adopted them. Bishops were to be seen conducting services in robes ornamented with verses from the Koran, or other pagan sentences. (*See the flat glass-cases against the Eastern partition of the room*).

Lying between the two hostile worlds, Sicily, on account of its geographical situation as well as of its semi-oriental origin, was destined to become the first silk manufacturing centre in Europe. Palermo produced some superb pieces, the oldest of which appear to date back to the xiiith century. Almost immediately Spain followed, and the Hispano-Moresque art of Granada, Seville and Almeria, flourished from the xiiith century to the xvth. When the Arabs were definitely driven out of Spain (1492), their art migrated to other parts of the Peninsula; Murcia, Valencia, and Toledo established their manufactories. At the same time, a similar extension had taken place in Italy; the silk industry introduced at Lucca and Venice, eventually reached Genoa, Florence, Milan, etc. Already prosperous at the beginning of the xvth century, these towns wove gold and silver threads into the silk, they warped brocade and brocatelles and contrived to produce cut and curly velvets which were in demand throughout christendom; they also re-embroidered these materials; Renaissance artists

(XVIIth & XVIIIth centuries.)

designed countless patterns for them, which still influence our modern industry. Flanders also, educated by the Spanish invasion and Italian importation, produced satins, curly velvets and brocades, at Bruges. France, which had brought back from the Crusades a taste for Eastern luxury, had been endeavouring ever since the xiiith century to produce silk cloths and *veloutaux* which Louis XI encouraged the Parisians to manufacture. In the middle of the xvth century, Louis XI created the Lyons and Tours workshops; at the end of the same century (1494), his son, Charles VIII, prohibited foreign importations; then Francis I attracted Italian designers, and Lyons won precedence; her taffetas were unique. Soon, however, the wars of religion dealt the district a fatal blow, but it recovered splendidly under Colbert and produced marvels; then, abruptly, the Revocation of the Edict of Nantes (1685) created a void around the looms and ruined them. It needed the whole effort of the xviiiith century and the invention of Jacquard of Lyons (1800) partly to repair this disaster in a national industry which, after thriving for four hundred years, had been killed by the stroke of a pen.

Fragment of an episcopal shoe, oriental silk material, gold embroidered, xiiith century.

Hose of figured silk, belonging to Arnaud de Via, archbishop of Bayonne (died 1333). Eastern art, xivth century.

Second glass-case :

Remnants of sacerdotal garments. Oriental art, xth century. Found in the tomb of Morard, abbot of Saint-Germain des Prés (990-1014).

Third glass-case :

Silk materials. Hispano-Moresque art, xivth century.

Silk materials, interwoven with inscriptions from the Koran; Oriental art, xviiiith century.

In a tall glass-case, near by :

Saint John the Evangelist, silk embroidery on linen. German (?) art, xiiith century.

An apostle, silk embroidery and Cyprus gold, on silk material. French art, xiiith century.

GOLDEN THREADS

Silver and gold threads, largely used in the xvth century for ornamenting materials and clothing, were called « Cyprus » threads. In reality they were manufactured at Genoa.

Fragment of an orfroy, silken embroidery and Cyprus gold. Italian art, xivth century.

Material embroidered with silk and Cyprus gold, dedicated to the Virgin, saint Vivent and saint Peter. French art, xivth century.

SARACENIC WORK

Some noble ladies had been to the early Crusades. They returned with a taste for « Saracenic work ». The art of weaving light materials came to us from Asia, as the others had done; muslin derives its name from Mosul; damask from Damascus, baldaquin from Bagdad, etc.

Corporal case, or burse, representing the Nativity. Silk and gold embroidery. French art, xivth century.

Cushion case (?). Silk and gold embroidery. French art, xivth century.

Episcopal Mitre. A black design on white silk. French art, late xivth century. Formerly preserved in the National Archives.

THE MITRE AND TIARA

The episcopal mitre, which only appears to date from the xth century, was at that period round and low. It became higher in the xith century, forming two horns (symbol of the Old and New Testament). They first appeared laterally, but, at the end of the same century, became anterior and posterior. In the xvth century, the sides were curved like Gothic arches; embroidery and precious stones were added to their decoration. Later, the dimensions grew larger still. The mitre was not always the emblem of a bishop, for popes very often granted them to mere abbots.

From Merovingian times down to the xivth century, the episcopal footwear was made in one piece, it was only in the xiv century that the velvet slipper was adopted.

From the xvth century onwards, a bishop's ring was the symbol of his union with the Church; canonically, it should be of gold and set with a single, self-coloured precious stone.

For a long while, the papal tiara possessed but one crown, the symbol of spiritual authority. At the beginning of the xivth century, Pope Boniface VIII, who had had violent disputes with Philip the Fair, addressed to the latter, in 1301, the bull *Ausculta Fili*, in which he vindicated the Pope's supremacy over sovereigns, his right to judge and dethrone them, etc. Philip caused the Holy Father's bull to be solemnly burnt, and Boniface, in order to confirm his pretensions, added a second crown to the tiara, as a symbol of his temporal authority. Some years later, Benedict XII, then Pope at Avignon, added yet a third crown, which testifies to the sovereignty of the Pontiff over Comtat-Venaissin, and has been retained by all the Popes at Rome.

Episcopal mitre. Embroidery of silk and gold in relief, enhanced with pearls. French art, xvth century.

Alms-bag, silk and gold embroidered. French art, xvth century (The figures are embroidered on fur).

Alms-bag, silk and gold embroidered, decorated with animals, Oriental style. Spanish or Sicilian (?) art, xivth century.

The front portion of an alms-bag, silk and gold embroidery, shaded and gaufered drop-stitching, on cloth lined with vellum. (A scene from the story of « Merlin the Wizard »). French art, xivth century.

In a companion tall case, at the other end of the room :

Embroidery of silks on lawn, decorated with inscriptions from the Koran in red letters, conventionalized. Arabian or Spanish art, xith or xiiith century.

Embroidery of silks on lawn, ornamented with polychrome cartouches and Koran inscriptions. Arabian or Spanish art, xiiith century.

Fragment of a silken shroud, enhanced with gold embroideries. Arabian art, xiiith century.

Silk material, embroidered with gold, decorated with fleur de lys, surrounded with blossoming twigs. French art, xiiith century Found in a tomb at Poitiers.

Episcopal mitre, embroidered with silk and gold. Spanish art, xvith century.

Prelate's gloves of red silk, gold embroidered. France, xvith century.

GLOVES

Gloves were used in antiquity amongst the Persians, Greeks, Romans, and Gauls; but the form they took amongst these various nations is unknown. In the Middle Ages they made their appearance, not as an article of clothing, but as clerical and feudal insignia. As long as the appointment of bishops remained the privilege of the lords, and while bishoprics were conceded as fiefs by a suzerain to his vassal, gloves were always an emblem of this investiture; but they lost this character in 1058, when the right of choosing bishops was vested in the Pope. From that time they became an article of secular attire, and from the xiiith century onwards they constituted the emblem of the holders of falconry rights, a privilege belonging to the highest nobility. In the xiiith century, their use was already less restricted, although they did not lose their seigniorial character. « To throw down the glove » meant defiance; « to give it » implied homage or surrender. In the *Chanson de Roland* a knight, when lying mortally wounded and giving up his soul to God, would raise his glove to heaven. But later, when this article of clothing became more widely used, it still retained, amongst the middle-classes themselves, a reference to its noble origin. In the xivth century, gloves were given as New-Year gifts, wedding presents, and tokens of promises.

Traces of this emblematic character are to be found in many phrases: *avoir les gants*, « to possess the gloves » (to have the priority in) — *se donner les gants*, « to give oneself gloves » (to give oneself airs) —, etc.

Bonnet of Pietro Grimani, Doge of Venice (1741-1752)

Alm's-bag embroidered with figures in relief, French art, xvth century.

Money-bag, embroidered with silk and enhanced with pearls. French art, xvi century.

THE ESCARCELLE

In the *escarcelle* or money-bag, which hung by people's side (whence : *purse-cutter*) were put the purse and various objects which were later put in the girdle itself, and afterwards in the « flap » (often an enormous bag from which sweets and fruits were produced to be offered to ladies). They were then transferred to the doublet, or a pouch under the left arm-pit. Pockets did not come into use until the advent of the wide hose of the xvth century; but the *escarcelles* reappeared in women's attire during the Revolution, when, in order to imitate the antique, scantily clad women, adopted draped robes and at the same time began to use the Roman *reticule*, which they misnamed *ridicule*.

Ecclesiastical biretta, embroidered with silk and enhanced with pearls. France, xvth century.

Purses, from the xvth to the xviii century.

In the middle of the room, in six glass-cases :

Chasubles and copes (Collection of), of velvet and silk, embroidered with silk and gold, on red, blue and white grounds, etc. Italian, Flemish, French, and Spanish art. Late xvth, and xvth century.

COLOURS

Oriental races were fond of attaching a symbolic meaning to colours. The Church and the Middle Ages did likewise.

The liturgical colours, that is to say those canonically adopted for public worship, were white, a symbol of purity; green, standing for hope in the life to come; red, in remembrance of the blood of the martyrs; black, the emblem of death. The Church, having been wedded to Christ, wears eternal mourning and it is for that reason that priests are clothed in black. However, this funereal colour did not appeal to the bishops.

princes of the Church triumphant, as a testimony to this triumph, they began to wear imperial purple (Violet hued-purple, not a bright red one, had constituted, in the time of the Roman emperors, the distinctive character of supreme power; it was of Phœnician origin. Tyrian purple was extracted from a shell-fish peculiar to the coasts of that region). But when violet became the episcopal colour, it bore a two-fold signification, *viz* mourning and sovereignty, hence kings wore violet for their mourning whilst their consorts dressed in white.

In the same symbolical turn of mind, religious orders sought for suggestive colours in the choice of their apparel. When the Benedictine monks founded the house of Cluny, in order to cut themselves adrift from the horrors of the century, they clothed themselves in black; but soon (middle of the xiith century) when they began to vaunt that magnificence which scandalised St. Bernard, a reaction took place in the order itself. Then other Benedictines, in the rival establishment of Cîteaux, adopted white to emphasize their role of reformers. Likewise, the Dominican friars who founded the Inquisition, chose white robes because they intended to purify the world. The Carthusians, Augustinians, Premonstratensians and Servites (White-Mantles) also wore white robes. Grey and brown, lustreless colours, being signs of humility and poverty, became the mendicant orders, such as the Franciscans, etc.. Saint Louis and Louis XI selected these colours for their own personal use, both as a matter of taste, the former out of modesty and the latter out of pride. Colours had a meaning amongst laymen just as amongst the clergy; green was set aside for fools and insolvent debtors; yellow denoted traitors and Jews. In the xivth century and more especially in the xvth Lon

ered » to them at festival times). The early xvth century showed a passionate taste for motley; this was carried out with countless colours by introducing the *slit* or *vent* (a reminiscence of the battle of Marignan, from which the conquerors returned with their clothes cut to shreds). By way of reaction, the xvth century grew sober-minded, it took a fancy to black or dark shaded velvets, which were ornamented with lace and fine linen (see Lace-work). Ladies of modest means wore grey (*gris*), hence the word *grisette*.

Fragments of a *baldaquin* or a mantle, of red velvet, inlaid with heraldic leopards, embroidered with gold thread and female figures, embroidered with polychromatic silks. English workmanship, early xvth century. (These remarkable fragments have been pieced together in the form of a chasuble).

THE ENGLISH LEOPARDS

When the Normans had conquered England, they displayed the two Norman leopards on the escutcheon of the new kingdom. When England annexed Guyenne, which also bore a golden leopard on a field gules, the English added this third leopard to their own. After they had been driven from France during the xvth century, they lost successively Normandy and Guyenne, but still retained the leopards.

On the other hand, the feathers which top the British coat of arms stand in commemoration of the battle of Poitiers (Monday, 19th september 1356), when the King of France, John the Good, who was wearing this plume on his helmet, surrendered to the Black Prince. As for the motto « *Honni soit qui mal pense* », it was given to the Order of the Garter, founded in 1350 by Edward III, the father of the Black Prince. The French language, imported into England by the Normans, continued to be used in all official documents from the xth century onwards. It was only in 1361 that this same King Edward decided to replace it by the English language.

Corporal cases, fragments of orfroys and altar-cloths, embroidered with silk and gold. Italian, Flemish, French, and Spanish art, xvth and xvth century.

Embroideries, orfrays, and braids of Cologne material, decorated with personages with painted and in laid faces. Rhenish art, xvth and xvith century.

Against the wall, West side :

Copes, chasubles, dalmatics and caporal cases of velvet with gold and silk embroideries, xvith century.

In front of the windows, South side :

Silk Chasubles, embroidered with silk and gold ; xvith century.

Mantle of a statue of the Virgin, embroidered with silk and gold on a silver ground. Spanish art, xvith century.

In front of the windows, North side, going to the left, first window :

Wrought material called « tissu poche », linen and red silk. Italian art, xivth century.

A band of grey silk, embroidered with silk and gold, decorated with grotesques, water-nymphs, chimeras, cupids, etc. Italian art, xvth century.

Yellow silk valance, embroidered with polychrome figures, and infant savages. (Trimmings from the bed of Pierre de Gondi) French art, xvith century.

In front of the second window :

Two dalmatics decorated with the arms of the dukes of Bar and Lorraine. Late xvth or xvith century. (The heraldic orfrays were later arranged on a flowered silk material).

In front of the third window :

Sacerdotal ornaments of white damask, embroidered with gold. xvith or early xvith century. From Autun.

Around the room :

Six tapestries from the History of Saint Stephen

series. French art, about 1500. From the church of Saint Étienne, at Auxerre. This admirable piece of workmanship represents, in a series of tableaux divided off by small columns or trees, episodes from the life of St. Stephen and which attended the discovery of his relics. From end to end, the entire piece measures forty-four metres. These hangings were originally intended to decorate the choir of the cathedral, immediately above the stalls, but they were little used for that purpose. During the sacking of Auxerre by the Huguenots, they disappeared. After much exchanging and purchasing, the Cluny Museum succeeded in bringing them together again. Recent cleaning has revived their splendid colouring (See Rooms XXVIII, XXXIX and XXXI).

In frames :

Christ blessing the world. Fragment of a Flemish tapestry. (From the Brussels workshops). About 1500.

The Worship of the Golden Calf. Embroidery of silks, gold, and silver. French art, 1515. From a piece of furniture used at Francis I's coronation.

Adam and Eve in the earthly Paradise. High-relief silk embroidery, enhanced with gold. English (?) art, xviii century.

Against the walls :

Two chests. French art, xvth century.

Two side-boards (restored), French art, xvth century.

Forming a frame for the tapestries are :

Decorative fragments of carved wood, from French furniture of the xvth century.

Fragments of friezes and portions of enclosure screens from various churches. French art, early xvth century. Most of these panels, having been taken to the store-rooms of the abbey church of Saint-Denis during the Revolution, have since been cut about and completed with

modern additions, to be used as wall-decorations in the church. They were afterwards taken down, and have recently been brought together by the Cluny Museum. Several of these fragments of carved oak may be safely said to come from the chapel at the château of Gaillon, built about 1510, by Georges d'Amboise, archbishop of Rouen and brother of Jacques d'Amboise, abbot of Cluny, who had built the Hotel of Cluny twenty years earlier.

Especially noticeable, near the two South windows, are :

Four panels of carved oak, decorated with grotesques, from the same chapel. Franco-Italian art, 1510.

Room XXVIII

Civil Garments and Embroideries

DURING the Middle Ages, just as now-a-days, popular garments, which required to be adaptable to working requirements, were plain, close-fitting and varied very little. It was not so with those worn by the nobility; from the xiith to the xivth century, men as well as women wore long robes, but these fell into disfavour during the reign of Charles VI. Then, luxury with regard to dress, which had appeared from the time of St-Louis, became extravagant. The lords adopted short tight coats, often made of two differently coloured, and afterwards multicoloured, materials, on which were reproduced the tinctures of the armorial bearings. Gentlemen and ladies were ornamented with coats of arms in silk and velvet. Men's foot-wear, imitating their armour, was pointed (shoes « à la poulaine ») and the point grew gradually to an inordinate length. When the curve reached up to the knees, it was necessary to keep the points up with a cord. At the same time, the head-gear developed to similar proportions; the ladies wore immense « hennins » (cone-shaped hats) adorned with *flocards* (veils) and ribbons. These outrageous fashions caused « no little ridicule » amongst the people. When the French nobility were beaten in the battle of Agincourt (1415). It was

said that their shortened coats were « more convenient for fleeing before the enemy ».

As for the wearing of furs, which dates back to barbaric epochs, and was perpetuated under the Merovingians and Carolingians, it was still prevalent throughout the Middle Ages. In the year 1300, Paris possessed 344 furriers. Our ancestors chiefly employed Northern squirrels under the names of *minever* (*vair* and *menu-vair*), for making mantles, counterpanes and shoes. Cinderella's slipper was made of « *vair* » (squirrel), not of « *verre* » (glass). In six months Philip the Long (1316) used 6346 skins for his clothes. On Jean the Fearless's cradle (1371), a single covering rug needed 1200 ermine skins. This very costly fur was exclusively set apart for the use of the nobility.

Meanwhile the long robe, which had been repudiated by fashionable folks in the xivth century, had not completely disappeared under Louis XII. It was still worn as an indoor garment, for castle chambers were cold; the « dressing-gown » has even been handed down to us. As town attire, Francis I and his sumptuous friends abandoned it, wearing short coats instead. This new fashion definitely permitted the wearing of the sword which, for three centuries, was part of the civilian dress.

Henry III, the *roy-femme* (as d'Aubigné named him), adopted for himself and his favorites all the mincing coquetties of feminine attire; dressed, combed and wearing the head-dress of a woman, with pearls round his neck, in his hair and ears, he originated the idea of adding to the lower part of his doublet, that paunch which gave the stomach a swollen appearance, just as the ladies of the xvth century had padded their skirts to feign pregnancy. In return, he did away with the « *braguette* » as being too masculine and he adopted tight hose after the Greek or « *greguesque* » style, hence the name *gregues* (breeches) which still holds.

The fancy of wearing a mask, already started in Charles VI's reign, was revived under Francis I, and the fashion became popular. Being very convenient at the outset to maintain the secrecy of amorous intrigues, it soon became so indispensable that decorum itself decreed that ladies should not venture forth without covering their faces with a mask. However, this mask, being the privilege of the nobility, remained forbidden to middle-class women.

In five flat glass-cases :

Civil garments, coat and waistcoat, serge and silk with trimmings. France, xviii century.

Rollers of silk foulard, embroidered with silk ; silken rollers, embroidered with silk, gold and silver, xviii century.

Trimmings of a lady's bodice; xviii century.

Panniers, tops, and middle portions of garments, etc. France, xviii century.

Dalmatics of velvet, embroidered with silk and gold. France, xviii century.

Dalmatics of white and green silk, embroidered in relief. France and Spain, xviii century.

In three wall cases :

Man's collar, of silk embroidered with gold. France, late xviii century.

Early jointed fans, made after imported models of Chinese fans. Venice, xviii century. (Paper cut out to imitate Venice lace, ribs of ivory or painted mica).

Fans painted on vellum, silk and paper, with ribs of ivory, etc. France, xvii and xviii century.

Leather-gloves, embroidered, painted, etc. Late xviii and early xix century.

Two medallions of polychromatic, figured satin. French art, late xviii century. From Marie-Antoinette's boudoir at Trianon.

Venetian robe of silk, late xviii century.

Biggins, ladies', girls', and children's; also a man's bonnet. xviii century.

Ladies' headgear; various provinces of Central Europe, xviii century.

HEADGEAR

Very few fashions have undergone so many changes as that of headgear : chapels, bonnets, amices (for hiding the ears) coifs, chaperons, etc.

From the ixth to the xiiith century « chapels » were adorned with peacock or flamingo feathers; in the xiiith and xivth, decorations of orfrays, enhanced with gold, pearls and precious stones, became the fashion; this luxury in headgear developed enormously towards the end of that xivth century, under the influence of Isabel of Bavaria, the gay wife of Charles VI, the mad king; the *escoffion* of that period was a kind of enormous cushion netted with jewelry, or again it was sometimes made up of starched linen (see the portrait of Jeanne de Laval, the wife of good king René), it preceded the *hennin* which was more imposing still, with its thin cone which measured as much as a yard in length when worn by noble ladies, or two feet in the attire of middle-class women.

The *hennin* was adorned, behind, with a veil or *flocard* which hung as low as the ground, and was held up under the left arm when the lady was on horseback. The *chaperon*, though simpler, was nevertheless highly complicated and also varied considerably from the xiiith to the xivth century; being used both by men and women, it was made of cloth, velvet, or silk. Ladies' chaperons were but a head-covering raised in front and protecting the nape and ears; at the end of the xvth century, it was cut short in the rear and lengthened on the sides; in the xvth it was nothing but a band of cloth placed on the head and hanging down behind, of velvet for noble ladies and of cloth for the « *sous-dames* » (under-ladies). Finally, in the xvth century the middle-class women remained the sole wearers of the chaperon, which became their distinctive sign.

As for masculine hats, they consisted of three parts, *viz* : the *visagère* which surrounded the face, the *guleron* which covered the head, and the *cornette*, a kind of pennant which hung on the back or side and grew very long, falling as low as the girdle whereon it was rolled. The silken *chausse* (shoulder-knot) which French university professors still wear, is a relic of the ancient chaperon.

From the xiiith century onwards, men wore, in addition to the chaperon, felt bonnets the shape and size of which were continually changing; they were adorned with an *enseigne*

(badge) or *affique* (kind of bauble), generally made of a more or less precious metal, sometimes enamelled or enriched with pearls, but always decorated with some sort of symbol (see Bronzes and Pewters). Louis XI wore on his hat plain badges of lead in the image of the Virgin and saints

In the middle of the room, in a piece of furniture with wings :

Samples of velvet (stamped, cut, curled, etc.) *Damasks*, brocades and brocatelles. Italian, French and Spanish art, from the xivth to the xviii century

On a stand between the two windows :

Specimens of embroideries, from the xith to the xvth century.

Two fragments of cloth of gold, decorated with animals. Oriental art, xith and xiiith century.

Braid of blue silk embroidered with gold, bearing the arms of France, xiiith century.

Material of blue silk, embroidered with Cyprus gold, decorated with fantastic animals. xivth century.

Pictures in silk embroidery. French or Italian art, xvth century.

Saint Peter, silk embroidery enhanced with gold. Italian art, late xvth century.

Near the door :

Two scenes from lives of saints. Pictures in silk embroidery, enhanced with silver and gold threads. Italian art, late xvth century.

Doll's bed, silk embroidered with gold. France, late xviii century.

On the walls :

Two panels of tapestry from the « Story of Saint Stephen » series. French art, about 1500 (See, page 184).

Small tapestries with figures, lords and ladies, and gallant inscriptions. German art, late xvth century.

Altar-cloth, embroidered with silk, silver and gold threads; divided into four portions: legends of Saint Mark and Saint John. Cologne workmanship, xivth century.

Hanging of lawn, embroidered with silk; scenes from the Old Testament. Swiss art, 1574.

Decorative fragments of carved wood, from French furniture of the xvth century.

Two friezes, of carved wood, by Alonso Berruguete. Spanish art, early xvth century.

Near the door :

Head of Saint Peter. Fragment of a tapestry, French art, 1594. This piece is the only one remaining from a set of twelve tapestries which made up the « History of Saint Peter » series, executed in Paris by Dubourg, after cartoons designed by Lerambert, for Saint Merry's church.

Room XXIX — Lacework

LACEWORK

THE various works to which the generic name of *lacework* is given at the present day, are of comparatively more recent creation than is imagined, since they only date from the Renaissance. Lace is really only a kind of improved embroidery, and on this account its origin may be said to date back to very ancient times; Homer and Isaiah speak of light materials with embroidered designs. Regular fine lacework has been found in Copt tombs of the ivth century, and a kind of gold lace in Scandinavian tombs. The Anglo-Saxons evinced in early times a marked partiality for embroidered garments. In the xith century Queen Edith and Queen Mathilda embroidered cloth with the help of their ladies-in-waiting. Throughout the feudal period, the suzerain's wife gathered round her in her manor the daughters of the vassals (chamber-maids) and taught them fancy-work, whilst the lord himself instructed young nobles (varlets) in the soldiering profession. Nuns, during the long, peaceful hours in convents, whiled away time by

doing work which the xivth century called « nonnains' work ». Was this lace? Not yet, for it was only in the xvth century that a few types of early lacework made their appearance on Flemish pictures; and in the xvth century, on Italian portraits. However, even at the end of the xvth century, books of patterns designed in Northern Italy only contain purely geometrical models, the lines of which are almost architectural, and the work was still crude; lacework was being evolved. The first attempt at this new craft was the embroidering of cloth, the material between the embroideries being cut away (*point coupe*); then the cloth grew more and more open-worked (*drawn threads*) so much so that it finally disappeared. The needle alone was plied and created the support at the same time as the ornamentation. The craft became less cramped and more delicate; Venice, Milan and Genoa, (which towns probably derived their inspiration from the East, or from the Saracens of Sicily, or again from conquered Dalmatia) multiplied the ingenious nature of the workmanship, exported their products, and vast sums of money flowed into Italy. At the same time, Flanders working with spindles, improved its art; France did not possess any yet. Catherine de' Medici imported transalpine productions into this country, together with her suite and manners, whilst England, under Henry VIII in 1517 and under Elizabeth in 1572, struggled against these productions and those of Flanders. For a century, the French nobility ruined themselves by purchasing lace-trimmings (*passerments*) which cost fabulous prices; Henry IV's plain tastes and the sumptuary laws of Louis XIII met with very little success when they attempted to prevent the financial ruin of France; in the wardrobe of Cinq Mars, in 1642, three hundred sets of lace adornments were found. As usual, the middle classes began to copy the luxury of the nobility; vainly did Louis XIII attempt to react and turn public taste towards fine Dutch linen which was soberer in aspect and cheaper in price. The very day of his death saw the reappearance of lacework, and his widow, Anne of Austria, shrouded his mortal remains therein. Mazarin resumed the struggle without any appreciable success and a new decree prohibiting lace was issued. At length, Colbert discovered the true remedy (1665). He sent for Venetian laceworkers and founded a French school for needle lace-working; the processes were identical, but French thread being finer and more supple, the new products surpass-

ed all others. Louis XIV adopted them and gave them a name : « point de France ». Great artists designed models for the Normandy workshops ; in particular, Alençon produced lace network, and Argentan chain-work. Meanwhile, the Venetian Senate condemned the deserting workers to death, and at Brussels an act of 1698 threatened with « severe chastisements » all the lace-workers who should emigrate. Meanwhile lace had begun to be manufactured all over Europe.

During the course of the xviiith and xviiith centuries, this craft produced valuable works of art : in Venice and Normandy lace-workers plied the needle, and in Flanders and Milan, the spindle. In England, the styles varied according to the reigns, but a preference for Flemish work was always predominant. Towards the end of the xviiith century, lace became quite common, and this popularity caused its vogue to decrease amongst the higher classes. Marie-Antoinette preferred plain muslins to them ; under this Queen the fashion changed ; everywhere the decline of lace was manifest. Then looms were invented, mechanical work supplanted manual labour, commerce killed the art of lace-making, leisure hours were lacking and lace-working died out.

In front of the windows :

Collar and cuffs of Venetian needle-lace ; point de rose (ponto in aria), xviiith century.

Venetian lace, needle-made : a flat rose, with figures.

Large bed-spread (or table-cloth) consisting of 72 square pieces, embroidered net-work with insertion, decorated with figures : « point coupé » bands. Early xviiith century.

Around the room, in flat glass cases ; Eastern side, two cases :

Strip of needle-lace decorated with figures. Venice, about 1580.

Table-cloth of linen, ornamented with strips of lace similar to the foregoing. Venice, xviiith century.

Linen table-cloth embroidered with green silk. Italy, late xviiith century.

Linen table-cloth, ornamented with strips of spindles made lace. Milan, xviiith century.

Northern side, in three cases :

Bed-spread, point coupé and Venetian lace, needle-made Venice, xvith century.

Man's collar of Dutch linen, edged with Flemish spindle-made lace. About 1636.

Centra-piece, point coupé and needle-lace. Venice, xvith century.

Lace collar and cuffs, Flemish (?) spindle-made found in a lady's tomb at the Château d'Usson (Auvergne), where Queen Margot lived in disgrace from 1587 to 1605.

Spindle-made lace of unknown origin, probably from Slesvig or Germany. Early xvith century. (The portrait of King Christian IV of Denmark shows similar collar and cuffs).

THE WORKSHOPS OF SLESVIG

Christian IV, who ascended the Danish throne in 1588, established the Slesvig workshops during the early years of his reign. Work was carried out there, not only by women, but also by old men who wore bags over their beards to prevent them from being caught up by the spindles. Some of the king's shirts preserved in the Rosenborg museum, and his portrait at Hampton Court, offer lace-work identical with the above specimens, which consequently may be said to date back to the end of the xvith century.

Alb of Venetian guipure; needle-lace. Late xvith century.

Western side, in two cases :

Lady's garment of Venetian guipure, needle-lace. Early xvith century.

Corporal of lace. Spanish art, xvith century.

Lace from Flanders, spindle-made. Binches, Malines, and Valenciennes workshops, xvith century.

Close by, in a small square glass-case :

Collar for state occasions, known as Colbert's; Venetian

guipure, needle-made, about 1664. A peerless piece of workmanship.

In a glass pulpit :

Table cloth of linen, embroidered with polychrome silk. Italian art ; early xviii century.

Between the two windows :

Altar-cloth, cotton-embroidered linen, representing the Virgin, saint Catherine and saint Barbara. Alsatian or German workmanship. Dated 1590.

COTTON

Cotton fabrics were brought to France at the time of the first Crusades, but their fabrication, which soon became a source of national wealth, only dates from the xviii century.

Men's Bonnets and women's Biggins. Alsatian workmanship, xviii and xix century.

In the middle of the room, in a hexagonal case :

Bonnet of the Emperor Charles the Fifth ; embroidery on cloth and spindle-made lace. Flemish art, early xv century.

CHARLES THE FIFTH'S BONNET

Needle-work was greatly in favour in the Low-Countries as early as the xiv century, and was part of female education ; Charles the Fifth wished to do more than protect this art, so he decreed its practice. This bonnet, which he wore under the crown, comes from the workshops of that period. Before being purchased by the Cluny Museum, it was included in the Treasury of Bâle cathedral.

Bottom of an alb of drawn thread. Late xviii century.

Around the room :

Three tapestry panels from the « History of Saint Stephen » series. French work, about 1500. (See page 184).

Surrounding the tapestries :

Decorative fragments of carved wood, from French furniture, xvth century.

Dais of Spanish and French retables, xvth and xvth century.

Room XXX — Silk materials

Articles of exceptional rareness are gathered together in this room and allow the art of silk working to be followed in all its developments.

Various frames, on the southern cyma ; in a gilt frame :

Material of figured silk. Oriental art, xiiith century. Found in the tomb of Pierre Lombard. (d. 1160), in Saint Marcel's church, Paris.

Material of silk and gold. Hispano-Arab art (xiiith century). Found in a child's tomb, at Villalcazar, Spain.

In six black frames, from left to right :

Oriental damask, xith century. Fragment of the Emperor Henry II (saint Henrys') dalmatic.

Silk material enhanced with Cyprus gold, decorated with fleurs de lys and fantastic animals. French or Italian art. xiiith century.

Gold brocaded dress material, decorated with fantastic animals, palm-trees and women. Lucca or Palermo art, xvth century.

Material of polychrome silk, decorated with peacocks combatant, Sassanide inspiration. Oriental art (date and origin doubtful).

Material of polychrome silk, known as « the tamer of Coire ». Byzantine or Syrio-Grecian art, vth or vith century.

« The red partridge ». Copt tapestry, vith century.

Foulard, painted silk. Oriental art, vith century.

Braid of silk, dyed purple, Byzantine art, viiith century.

« The Quadrigs ». Silk material, yellow figures, blue ground. Byzantine art, viiith century. From the Treasure at Aix-la-Chapelle.

Nine fragments of silk materials and gold brocaded dress materials. Oriental art, xiith century.

Blue serge, embroidered with gold, decorated with fleurs de lys. French art, xiiith century.

Near by, in small frames :

Brocaded satin decorated with lions combatant and Koranic inscriptions. Spanish art imitating Mussulman materials, middle of the xvth century.

Brocatel decorated with yellow lions combatant, on a red ground, Oriental style. Italian art, late xvth century.

✓ *Above these :*

Cope of purple velvet embroidered with gold ; English art, xviiith century.

Towards the entrance doors, in frames :

Woollen materials, Roman art. Found at Mayence. Clave, silk embroidered. Copt art, ivth century.

Taffeta, blue, with gold figures. Copt art, vith century (?).

Damaek, Copt art, vith century.

Polychrome lace braids, Cologne material, xvth century.

Funeral masks. Copt art, ivth to vith century.

Brocatel. Hispano-Moresque art, xivth century.

On the Northern wall, in revolving frames.

Collection of Copt materials, Grecian art from Egypt, iiiird and ivth century ; claves and orfrays of tapestry, braids, fragments of carpets and clothing, found in tombs at Akmin, Antinoe, etc.

Near by, in a glass-pulpit :

Hair-nete and reticules, of polychrome lace (or knitting) Copt workmanship, 11th and 14th centuries.

In a piece of furniture with wings .

Collection of materials of silk, damasks, wrought material, brocades and brocatels, etc. Arabian, Sicilian (Palermo), Spanish, Italian (Venice, Lucca), French art, of the 13th and 14th centuries.

Cotton materials, stencil printed, imitating brocades and brocatels. German art from the 13th to the 14th century.

Brocades and brocatels. Italian and French art, 15th century.

Figured satins. Italian art, 15th century.

Reversible damasks. Italian art, 15th century.

Woollen damask. Spanish art, 15th century.

Figured satin and serge. Spanish art, 15th century.

Orfrays of gold brocade, brocatel orfrays. Italian art, late 15th century.

At the other end of the room :

Open-worked door from the Abbey of Saint-Riquier, (Somme).

Room XXXI — Linen Articles

In three cases, Western side :

Under linen, of stitched cloth. Alsace and Normandy. xviii and xviii century.

Chomise of cloth, cotton mittens, damasked table-linen. France, xviii century.

HANDKERCHIEFS

Handkerchiefs were of extreme rareness, both in the xvth and up to the end of the xvth century. Louis XI's queen only possessed three, and Henry IV, five. Noses were wiped either on the cuffs or with the fingers. However, since forks had not yet been invented, and people ate out of a common dish with the fingers of their right hand, good breeding required that well-bred persons should wipe their noses exclusively with their left hand. Besides, from very ancient times, the left hand has always been reserved for unclean purposes and most religions consider the left hand-side as unlucky; bad omens come from the left (*senestre*), hence the word *sinister*. This superstition, which is to be found among the Greeks, Romans, Jews, Mussulmans, Christians, etc, still exists. The impenitent thief was nailed on the left; God classes the reprobate on his left, the Son sits on the right of his Father, visitors of note sit on the right of their host, etc.

Ladies' collars. France, xviii century.

Patterns of embroidery and ladies' handiwork. France, xviii century.

In two pieces of furniture with wings ; Northern side :

1^o Lace-work (Types and samples of), needle-made and spindle-made, from the late xvth to the late xviii century.

2^o Embroidered lace nets, from the xvth to the xviii century.

Between the two, in a flat glass-case :

Men's waistcoats. France (Louis XV and Louis XVI).

Near by, in a glass-pulpit :

Hair-nets and reticules, of polychrome lace (or knitting) Copt workmanship, **11th and 14th centuries.**

In a piece of furniture with wings .

Collection of materials of silk, damasks, wrought material, brocades and brocatels, etc. Arabian, Sicilian (Palermo), Spanish, Italian (Venice, Lucca), French art, of the **12th and 14th centuries.**

Cotton materials, stencil printed, imitating brocades and brocatels. German art from the **12th to the 14th century.**

Brocades and brocatels. Italian and French art. **15th century.**

Figured satins. Italian art, **15th century.**

Reversible damasks. Italian art, **15th century.**

Woollen damask. Spanish art, **15th century.**

Figured satin and serge. Spanish art, **15th century.**

Orfrays of gold brocade, brocatel orfrays. Italian art, **late 15th century.**

At the other end of the room :

Open-worked door from the Abbey of Saint-Riquier (Somme).

Room XXXI — Linen Articles

In front of the window :

Robe of cloth, embroidered with flax thread. Venice, **15th century.**

In the middle of the room, in a square case :

Lower portion of an alb in « point de France » ; Chain, needle-made lace. Argentan workshps. **Early 17th century.**

FRENCH LITERATURE.

Histoire de la Littérature française illustrée

by Joseph BÉOIER, of the French Academy
and Paul HAZARD, Professor at the Collège de France.

A collective work by eminent masters of French literary learning, this new history has obtained considerable success (more than 33 000 copies subscribed already) and its publication has been considered as a real literary event both in France and in the world at large. This indispensable work appeals to all those who, in any part of the world, study not only French literature but also literature in general.

Two magnificent large 4to volumes (Larousse 4to collection 12,5 x 10 ins.), 857 engravings, 46 full-page plates, 8 coloured plates.

Histoire de la littérature et de la pensée françaises

by Daniel MORNET, professor at the Sorbonne.

This work presents in a very attractive and suggestive way all that is essential to be known of French literature from the origins to these days: the development and evolution of ideas, doctrines and schools; the history of thought and taste.

One volume (Bibliothèque Larousse, 5 x 8 ins.), 24 portraits.

Histoire de la littérature et de la pensée françaises contemporaines

by Daniel MORNET.

This work, similar to the preceding one, studies the evolution of French literature from 1870 to 1925. It is the only unbiased, reliable and complete guide-book for any one who wants to know contemporary French literature in all its complexity.

One volume (Bibliothèque Larousse, 5,3 x 8 ins.), sixteen portraits.

On sale at the principal booksellers all over the world.

FRANCE

La France, Géographie illustrée

by P. JOUSSET

A magnificent work which describes France in all her aspects, her mountains, rivers and coasts, her towns and inhabitants, etc.. A thorough and literally up-to-date documentation on the country and its productions, its life and people, nearly 2000 illustrations making up the most plentiful collection of views ever brought together on France, over 50 maps either in black or colour forming a complete atlas.

Two splendid volumes (Larousse 4to collection, 12,5 x 10 ins.).

Paris et ses Environs

by A. DAUZAT et F. BOURNON

The only large work offering a truly reliable and complete survey of the French capital in its present state, and giving ample space to the surrounding district, one of the most interesting regions of France from a tourist's point of view. A book which all those who wish to know Paris will want to buy.

A magnificent 4to volume (Larousse 4to collection 22,5 x 10 ins.) 704 engravings, 60 plates and maps either in black or colour.

Les Cent vues de Paris

by R. BONFILS

130 art prints (monuments, picture gallery masterpieces, etc.) with historical and artistic commentaries. An elegant album (7 x 10 ins.) English and French editions.

Toute la France

by E. SAILLANS, agrégé de l'Université.

This work sums up all that is interesting to know about France: geography, history, political constitution, ways and customs, intellectual life, industrial and commercial development, etc. A fine volume (5 x 8 ins.) 50 diagrams.

On sale at the principal booksellers all over the world.
